

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

SPECIFICATION

- Part No. : **AGGBP.25A.07.0060A**
- Description : 25x25mm One Stage GPS-GLONASS-GALILEO-BeiDou Embedded Active Patch Antenna Module with Front-End SAW Filter
- Features : Full GPS-GLONASS-GALILEO-BeiDou Coverage
18dB One-stage LNA
Ceramic patch element
Front-end SAW filter to reduce out of band noise
Wide input voltage 1.8V to 5.5V
25.1 x 25.1 x 7.9mm
60mm Ø1.13 IPEX MHFI (U.FL)
Automotive TS16949 Production and Quality Approved
Cable length and connector type customizable
RoHS compliant

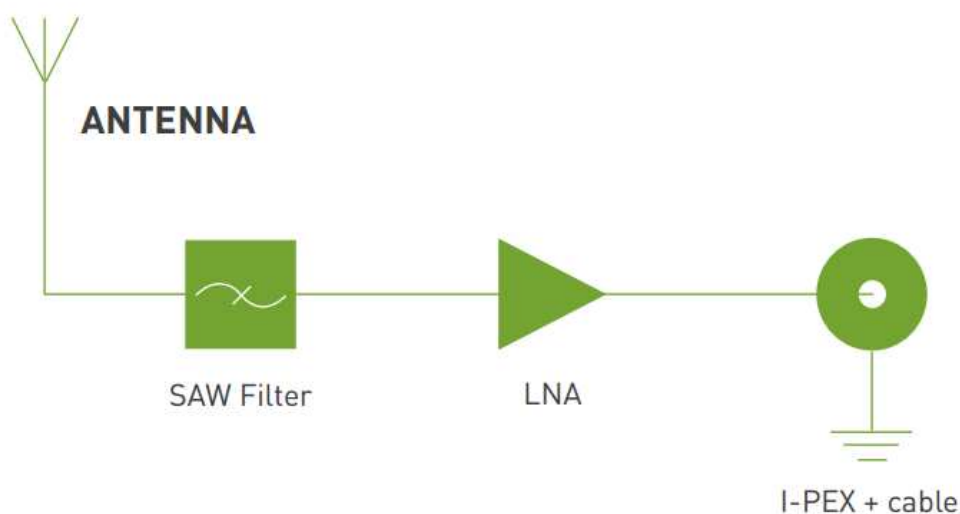

1. Introduction

The AGGBP.25A is an internal GPS/GLONASS/GALILEO/BeiDou active patch antenna with Ø1.13 cable and IPEX MHFI (U.FL compatible) connector. It is the ideal antenna for next generation GNSS devices to achieve good sensitivity across all bands in a small form factor.

The active patch antenna, by means of a double resonance design, has a wide-band operation over GPS/GLONASS/GALILEO/BeiDou systems from 1561MHz to 1606MHz. It includes a one-stage LNA and front-end SAW filter to reduce out of band noise, such as from nearby cellular transceivers. This antenna offers better protection from nearby radiated power surges and greatly reduces the probability of damaging your GPS/GLONASS/GALILEO/BeiDou receiver due to nearby transmissions.

The patch, the ground plane, the LNA, and front-end SAW components are all integrated in a dimension of 25.1 x 25.1 x 7.9 mm, connecting with a Ø1.13 60mm long coaxial cable and an IPEX MHFI connector. The AGGBP.25A is manufactured and tested in a TS16949 first tier automotive approved facility. The cable length and connector type can be adjusted for a MOQ.

For further optimization to customer specific device environments, custom tuned patch antennas can be supplied, again to a MOQ. For more details please contact your regional Taoglas sales office.

6. Connector Usage Precautions

Mating / unmating

(1) To disconnect connectors, insert the end portion of I-PEX under the connector flanges and pull off vertically, in the direction of the connector mating axis.

(2) To mate the connectors, the mating axes of both connectors must be aligned and the connectors can be mated. The "click" will confirm fully mated connection.

Do not attempt to insert on an extreme angle.

Pull forces on the cable after connectors are mated

After the connectors are mated, do not apply a load to the cable in excess of the values indicated in the diagram below.
