

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

## Up Converter Mixer with Fractional-N Frequency Synthesizer and VCO

# AK1575

### 1. Overview

AK1575 is the up-converter mixer with fractional-N frequency synthesizer and integrated VCO. AK1575 is targeted at the application that requires a high linearity performance in frequency conversion. The mixer block is comprised of the differential input and the differential output. Input frequency range is from 20MHz to 1000MHz and output frequency range is from 690MHz to 4000MHz. The current consumption and the analog performance can be adjusted by a resistance connected to BIAS pin. The power supply voltage of mixer covers 4.75 to 5.25V.

The local signal output frequency range is from 262.5MHz to 4400MHz generated by internal VCO, synthesizer and divider. Not only a local signal is supplied to an internal mixer, but also can be taken to outside. A power supply voltage range of VCO/synthesizer is 2.7V to 3.6V or 4.75V to 5.25V.

The CPU interface is 24bit serial data and its voltage is ranging from 2.7V to 5.25V

### 2. Features

#### General

- |                          |                           |   |

**4. Block Diagram and Function**

**Fig. 1 Block diagram**

**Block function description**

Block	Function
Mixer	Frequency Mixer which converts RF signal to IF signal
N divider	Frequency divider which divides the signal of VCO and pass it to phase frequency detector
$\Delta\Sigma$ Modulator	Control the modulus of N divider and realize fractional dividing
R counter	Frequency divider which divides the signal of reference clock and pass it to phase frequency detector
PFD (Phase Frequency Detector)	Detect a phase difference between the divided VCO signal and comparison frequency, and then drive the charge pump
Charge Pump	Output the electric charge according to the phase difference detected by PFD
VCO	The voltage controlled oscillator divided into three bands

<b>5. Pin function Description and Assignment</b>
---

**1. Pin Functions**

No	Name	I/O	Pin function	Power Down	Remarks
1	VREF1	AO	Connecting a capacitor to the ground plane		
2	PVDD	P	Synthesizer Power Supply		
3	GND	G			
4	MIXBIAS	AI	Connecting a resistor to the ground plane		
5	MIXINN	AI	Mixer Input		
6	MIXINP	AI	Mixer complementary Input		
7	MIXVDD	P	Mixer Power Supply		
8	LOVDD	P	Mixer Local Power Supply		
9	MIXOUTP	AO	Mixer Output		Open collector
10	MIXOUTN	AO	Mixer complementary Output		Open collector
11	PDN	DI	Power Control A logic low on this pin powers down the device		Schmidt trigger input
12	LE	DI	Load Enable		Schmidt trigger input
13	CLK	DI	Serial Clock Input		Schmidt trigger input
14	DATA	DI	Serial Data Input		Schmidt trigger input
15	LD	DO	Lock Detect Output	LOW	
16	SVDD	P	Interface Power Supply		
17	LOP	AIO	Local complementary Input / Output		
18	LON	AIO	Local Input / Output		
19	OAVDD	P	Local Output Amplifier Power Supply		
20	GND	G			
21	VCNT	AI	Control Input to VCO		
22	VREF2	AO	Connecting a capacitor to the ground plane		
23	GND	G			
24	VCOVDD	P	VCO Power Supply		
25	CPBIAS	AI	Connecting a resistor to the ground plane		
26	CP	AO	Charge Pump Output	Tri-State	
27	GND	G			
28	CPVDD	P	Charge Pump Power Supply		
29	CPBUFVDD	P	Charge Pump Pre-Buffer Power Supply		

No	Name	I/O	Pin function	Power Down	Remarks
30	TEST1	DI	Test enable A logic low on this pin test mode the device.		Pull Down Schmidt trigger input
31	TEST2	DI	Test enable A logic low on this pin test mode the device.		Pull Down Schmidt trigger input
32	REFIN	AI	Reference Input		

Note 1) The exposed pad at the center of the backside should be connected to ground.

The following table shows the meaning of abbreviations used in the “I/O” column above.

AI:Analog input pin	AO:Analog output pin	AIO:Analog I/O pin	DI:Digital input pin
DO:Digital output pin	P: Power supply pin	G:Ground pin	

## 2. Pin Assignments

32pin QFN (0.5mm pitch, 5mm x 5mm)

Fig. 2 Package Pin Layout (Top View)

<b>6. Absolute Maximum Rating</b>
-----------------------------------

Parameter	Symbol	Min.	Max.	Unit	Remarks
Supply Voltage	VDD1	-0.3	5.5	V	Note1, Note2
	VDD2	-0.3	5.5	V	Note 3
	VDD3	-0.3	5.5	V	Note4
Ground Level	VSS	0	0	V	Note5
Maximum RF Input Level	RFPOW		12	dBm	Note6
Maximum Lo Input Level	LOPOW		12	dBm	Note7
Analog Input Voltage	VAIN	VSS-0.3	VDD3+0.3	V	Note1, Note8
Digital Input Voltage1	VDIN1	VSS-0.3	VDD1+0.3	V	Note1, Note9
Digital Input Voltage 2	VDIN2	VSS-0.3	VDD3+0.3	V	Note1, Note10
Input Current	IIN	-10	10	mA	
Storage Temperature	Tstg	-55	125	°C	

Note1 All voltage reference ground Level: 0V

Note2 Applied to the [SVDD] pin

Note3 Applied to the [MIXVDD] and [LOVDD] pins

Note4 Applied to the [CPVDD], [CPBUFVDD], [PVDD], [VCOVDD] and [OAVDD] pins

Note5 Applied to the All [GND] pins

Note6 Applied to the [MIXINP] and [MIXINN] pins

Note7 Applied to the [LOP] and [LON] pins

Note8 Applied to the [VCNT] and [REFIN] pins

Note9 Applied to the [CLK], [DATA], [LE] and [PDN] pins

Note10 Applied to the [TEST1] and [TEST2] pins

Exceeding these maximum ratings may result in damage to the AK1575. Normal operation is not guaranteed at these extremes.

## 7. Recommended Operating Range

Parameter	Symbol	Min.	Typ.	Max.	Unit	Remarks
Operating Temperature	Ta	-40		85	°C	
Supply Voltage	VDD1	2.7	3.0	5.25	V	
	VDD2	4.75	5	5.25	V	
	VDD3	2.7	3	3.6	V	
		4.75	5	5.25	V	

Note1 Applied to the [SVDD] pin

Note2 Applied to the [MIXVDD] and [LOVDD] pins

Note3 Applied to the [CPVDD], [CPBUFVDD], [PVDD], [VCOVDD] and [OAVDD] pins

## 8. Electrical Characteristics

### 1. Digital DC Characteristics

Parameter	Symbol	Conditions	Min.	Typ.	Max.	Unit	Remarks
High level input voltage	Vih		0.8×VDD1			V	Note 1)

## 9. Block Functional Descriptions

### • Operation Mode

AK1575 operation is controlled as follows by the [PDN] pin and registers.

Function	Pin	Registers			Operating state			
	[PDN]	{MIXEN}	MODE[1]	MODE[2]	Mixer	Synthesizer	VCO	Local Out
StandBy1	"L"	X	X	X	OFF	OFF	OFF	OFF
Prohibited	"H"	0	0	0	OFF	ON	ON	OFF
Func1	"H"	0	0	1	OFF	ON	ON	Output
Func2	"H"	0	1	0	OFF	ON	OFF	Input
StandBy2	"H"	0	1	1	OFF	OFF	OFF	OFF
Func3	"H"	1	0	0	ON	ON	ON	OFF
Func4	"H"	1	0	1	ON	ON	ON	Output
Func5	"H"	1	1	0	ON	ON	OFF	Input
Func6	"H"	1	1	1	ON	OFF	OFF	Input

StandBy1: Stand-by mode. Current consumption is minimized. It is available to write to the registers.

Func1: VCO and Synthesizer are active and Local signal outputs from [LOP] and [LON] pins.

Func2: Only Synthesizer is active. PLL operation is available with the external VCO.

StandBy2: Stand-by mode. Current consumption is minimized. It is available to write to the registers.

Func3: VCO, Synthesizer and Mixer are active.

Func4: VCO, Synthesizer and Mixer are active and Local signal outputs from [LOP] and [LON] pins.

Func5: Synthesizer and Mixer are active. PLL operation is available with the external VCO.

Func6: Only Mixer is active. A local signal needs to be input from [LOP] and [LON] pins.

**Notes for writing into registers**

- 1) The setting of <Address 0x02> and <Address 0x03> is reflected to each circuit when writing to <Address 0x01>.
- 2) <Address 0x04> behavior is reflected by itself.

When AK1575 powers on, the initial registers value is not defined. It is required to write the data in all addresses in order to commit it.

< **Address0x01:Freq1** >**D [16:15]****VCO[1:0] : Select VCO**

In accordance with the used frequency, select the VCO.

VCO[1:0] Dec	VCO oscillating range Frequency
0	2.1GHz~3.0GHz
1	3.0GHz~3.4GHz
2	3.4GHz~4.4GHZ
3	prohibited

**D [14:13]****DIV[1:0] : LoDivider**

In accordance with the used frequency, select the division number.

DIV[1:0] Dec	LoDivider Divide Number
0	No divide
1	2 divide
2	4 divide
3	8 divide

**D [11:0]****INT[11:0] : NDivider**

N divider divided number.

The allowed range is 35 to 4091.

## &lt; Address0x02:Freq2 &gt;

**D [18:16]****CP1[2:0] : Set the charge pump current for normal status****D [14:12]****CP2[2:0] : Set the charge pump current for fast lock**

CP1 is the charge pump current setting of the normal mode.

CP2 is the charge pump current setting of the fast lock mode

Charge pump current is determined by the following formula.

$$\text{Charge pump current [A]} = \text{Icp\_min [A]} \times (\text{CP1 or CP2 setting value} + 1)$$

$$\text{Icp\_min [A]} = 8.1 / \text{R [ohm]}$$

R: the resistance value which is connected to [CPBIAS] pin

Charge pump current (typ) unit :  $\mu\text{A}$ 

CP1[2:0] CP2[2:0]	R		
	33k $\Omega$	27k $\Omega$	22k $\Omega$
0	245	300	368
1	491	600	736
2	736	900	1105
3	982	1200	1473

255	255

D [11:0]

**MOD[11:0]: Fractional Denominator determination**

Set the denominator of Fractional divider.

The allowed range is from 2 to 4095.

**< Address0x04: function >**

**D[19:16]**

**CALTM [3:0]: Set the calibration precision of VCO**

The register {CALTM [3:0]} determines the calibration precision and time for VCO. When {CALTM [3:0]} is larger, the calibration precision increases, but the required time becomes long as trade-off. The value calculated by the following formula is recommended to get enough calibration precision. However, {CALTM [3:0]} should be set between from 1 to 11. 0 and over 11 is prohibited.

$$\{CALTM[3:0]\} \geq \log_2(F_{PFD}/20000)$$

$F_{PFD}$  : PFD frequency

The calibration time can be estimated as following calculation;

$$\text{Calibration time} = 1 / F_{PFD} \times \{(6 + 2^{\{CALTM[3:0]\}}) \times 8 + 3\}$$

**D [14]**

**LDCNTSEL: Lock Detect Precision**

Set the counter value for digital lock detect.

LDCNTSEL	Function	
0	15 times Count	unlocked to locked
	3 times Count	locked to unlocked
1	31 times Count	unlocked to locked
	7 times Count	locked to unlocked

**D [13]**

**LD: Lock detect function**

Set the lock detect function.

- 0: Digital lock detect
- 1: Analog lock detect

**D [12]**

**MTLD: Local signal mute**

- 0: Don't mute local signal in unlock state.
- 1: Mute local signal in unlock state.

※Please use {MTLD} =0 at the time of {LD}=1.

Please use {MTLD}=1 at the time of {MODE}=1

**D [11]****FASTEN : Fast Lock mode setting**

Enable / disable fast lock mode.

0: Disable fast lock mode

1: Enable fast lock mode

Please refer to "14. Fast lock mode" for details.

**D[10:7]****FAST [3:0] : Fast lock timer setting**

Set the count number of fast lock timer.

Count Number = 511 + FAST[3:0] × 512

TIMER[3:0]	Count Number
0	511
1	1023
2	1535
3	2047
4	2559
5	3071
6	3583
7	4095
8	4607
9	5119
10	5631
11	6143
12	6655
13	7167
14	7679
15	8191

**D [6]****CPHIZ: Charge Pump TRI-STATE**

Set the charge pump output in Tri-State.

0: Normal

1: Tri-State

**D [5]****DSMON:**  $\Delta\Sigma$ -modulator activationIn Integer-N setting, set the  $\Delta\Sigma$ -modulator to active.0:  $\Delta\Sigma$ -modulator inactive1:  $\Delta\Sigma$ -modulator active**D [4]****MIXEN:** Mixer Enable

0: Stand-by

1: Enable

**D [3:2]****MODE [1:0]: Local operation mode**

Set the operation of Synthesizer, VCO and LOP/LON pins.

<b>MODE[1:0]</b>	<b>Local Operating MODE</b>
0	Internal Synthesizer and VCO are active.
1	Internal Synthesizer and VCO are active and the local signal outputs from LOP/LON pins.
2	The mode operating external VCO with internal synthesizer.
3	The mode using an external local signal.

**D [1:0]****LOLV [1:0]: Local output power**

At the state of {MODE [1:0]} =1, set the power of the local signal output from LOP/LON pins.

<b>LOLV[1:0]</b>	<b>LOP, LON output power [dBm]</b>
0	-6
1	0
2	3
3	6

**12. Lock Detect**

Lock detect output can be selected by {LD} in D [13] of <Address0x04>. When {LD} is set to “1”, the [LD] pin outputs a phase comparison result which is from phase detector directly. (This is called “analog lock detect”.) When {LD} is set to “0”, the output is the lock detect signal according to the on-chip logic. (This is called “digital lock detect”.)

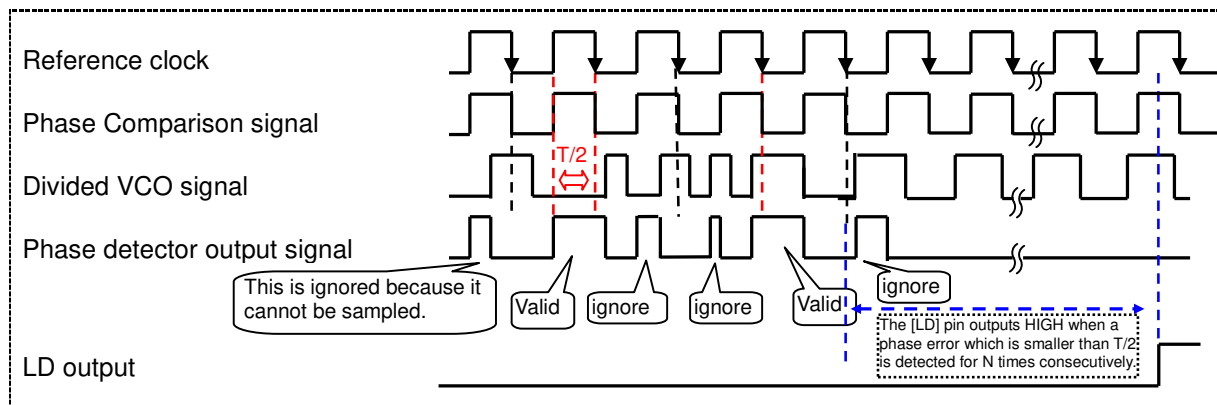

The digital lock detect can be done as following:

The [LD] pin is in unlocked state (which outputs “L”) when a frequency setup is made.

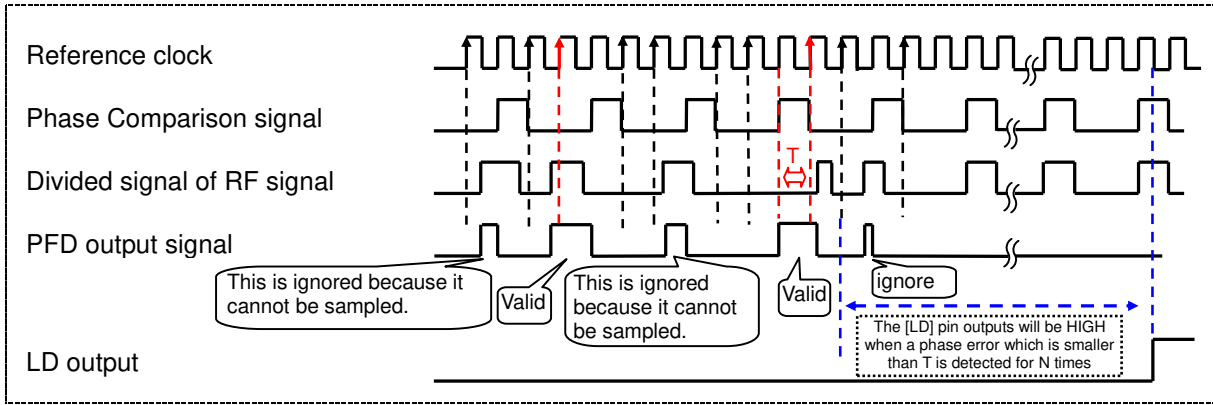

In the digital lock detect, the [LD] pin outputs “H” (which means the locked state) when a phase error smaller than a cycle of [REFIN] clock (T) is detected for N times consecutively. When a phase error larger than T is detected for N times consecutively while the [LD] pin outputs “H”, then the [LD] pin outputs “L” (which means the unlocked state). The counter value N can be set by {LDCNTSEL} in D [14] of <Address0x04>. The N is different between “unlocked to locked” and “locked to unlocked”.

{LDCNTSEL}	unlocked to locked	locked to unlocked
0	N=15	N=3
1	N=31	N=7

The lock detect signal is shown below

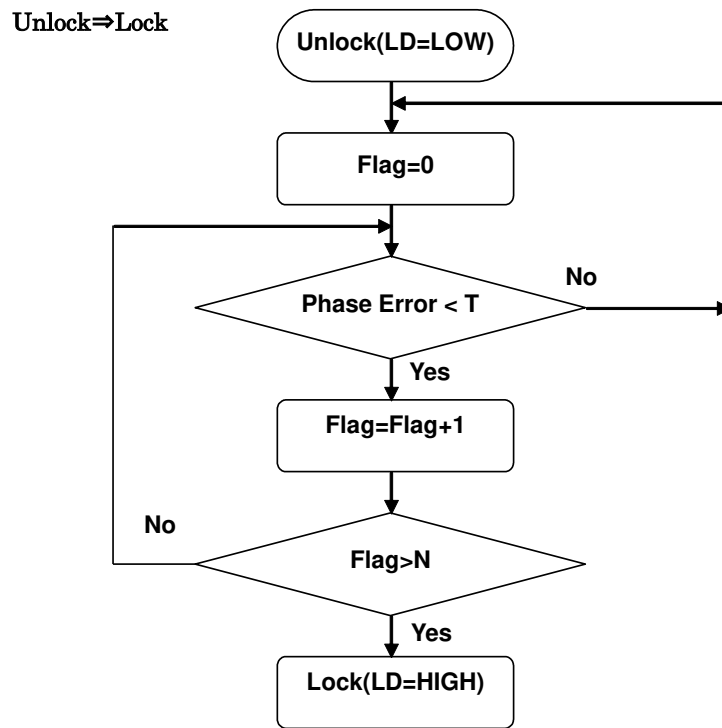

Case of “R = 1”

Case of "R > 1"

Lock⇒unlock

### 13. Frequency Setup

The following formula is used to calculate the frequency setting for the AK1575.

$$\text{Frequency setting} = \text{Ref Frequency} \times (\text{INT} + \text{FRAC}/\text{MOD})$$

Ref Frequency	: PFD frequency
INT	: Integer divide Number (Refer to <Address 0x01> : INT[11:0])
FRAC	: Numenator setting number (Refer to <Address 0x02> : FRAC[11:0])
MOD	: Denominator setting number (Refer to <Address 0x03> : MOD[11:0])

Set in the range of 35 to 4091 for INT[11:0].

Set in the range of 0 to (MOD-1) for FRAC[11:0]

Set in the range of 2 to 4095 for MOD[11:0]

#### ○ Example

To complete Ref Frequency=19.2MHz, Frequency setting=2460.1MHz, set as follows

$$\begin{aligned} \text{INT} &= 128 \\ \text{FRAC} &= 25 \\ \text{MOD} &= 192 \end{aligned}$$

$$\text{Frequency setting} = 19.2\text{MHz} \times (128 + (25 / 192)) = 2460.1\text{MHz}$$

By writing <Address 0x01, 0x02, 0x03>, frequency is set. When <Address 0x01> is written, the setting of <Address 0x03> and <Addresses 0x02> is reflected in the internal circuit. At the time of the writing of <Address 0x01>, it is necessary for a synthesizer block to be powered on. The writing of <Address 0x01> as a trigger, frequency setting and VCO calibration are carried out, and fast lock counter starts operation. To set frequency definitely, <Address 0x01> should be written in the state that {MODE [1:0]} in <Address 0x04> is 0 or 1 or 2 and [PDN] pin is “H”.
