AK4452

115dB 768kHz 32-bit 2ch Premium DAC

1. General Description

The AK4452 is a 32-bit 2ch Premium DAC, which achieves industry's best low distortion characteristics by a newly developed low distortion technology. It corresponds to a 768kHz PCM input and an 11.2MHz DSD input at maximum, suitable for play backing high resolution audio sources that are becoming widespread in network audios, USB-DACs and Car Audio Systems. In addition, "OSR-Doubler" technology is newly adopted, making the AK4452 capable of supporting wide range signals and achieving low out-of-band noise while realizing low power consumption. Moreover, the AK4452 has five types of 32-bit digital filters, realizing simple and flexible sound making in wide range of applications.

Application: AV Receivers, CD/SACD Players, Network Audios, USB DACs, USB Headphones, Sound Plate/Bars, Car Audios, Automotive External Amplifiers, Measuring Instruments and Control Systems.

Note 12. The voltage on (VREFH1 – VREFL1) is held +5V externally.

Note 13. The full scale voltage when applying a 1kHz sine wave (0dB) in PCM mode, or when applying a 1kHz sine wave (25~75% duty) in DSD mode. Output voltage scales with the voltage of (VREFH1 – VREFL1).

$$\text{DAC: AOUT (typ. @0dB)} = (\text{AOUT+}) - (\text{AOUT-}) = \pm 2.8\text{Vpp} \times (\text{VREFH1} - \text{VREFL1})/5$$

Note 14. Regarding Load Resistance, AC load is 2kΩ (min) with a DC cut capacitor (Figure 72). DC load is 2 kΩ (min) without a DC cut capacitor (Figure 72). The load resistance value is with respect to ground. Analog characteristics are sensitive to capacitive load that is connected to the output pin. Therefore the capacitive load must be minimized.

Note 15. In the power down mode. All other digital input pins including clock pins (MCLK, BICK and LRCK) are held DVSS.

Note 22. In DSD mode, the signal level is ranging from 25% to 75%. Peak levels of DSD signal above this duty are not recommended by SACD format book (Scarlet Book).

Note 23. It is assumed that the output level is 0dB when the input signal is 1kHz and the duty range is between 25 ~ 75%. The output level is assumed as 0dB when applying a 1kHz sine wave in 25~ 75% duty.

*Digital filter characteristics are based on simulation results.
