# imall

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from, Europe, America and south Asia, supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts, Customers Priority, Honest Operation, and Considerate Service", our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip, ALPS, ROHM, Xilinx, Pulse, ON, Everlight and Freescale. Main products comprise IC, Modules, Potentiometer, IC Socket, Relay, Connector. Our parts cover such applications as commercial, industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

#### QUAD PRECISION HIGH SPEED MICROPOWER TIMER

#### **GENERAL DESCRIPTION**

The ALD4501 timer is a high performance QUAD monolithic timing circuit built with advanced silicon gate CMOS technology. It offers the benefits of high input impedance, thereby allowing smaller timing capacitors and longer timing cycle; high speed with typical cycle time of 500ns; low power dissipation for battery operated environment; and reduced supply current spikes allowing smaller and lower cost decoupling capacitors. Each of the four timers can be independently operated in either the monostable, astable, or 50% duty cycle mode.

Each timer is capable of producing accurate time delays and oscillations in both monostable and astable operation. It operates in the one-shot (monostable) mode or 50% duty cycle free running oscillation mode with a single resistor and one capacitor. The inputs and outputs are fully compatible with CMOS, NMOS or TTL logic.

There are three matched internal resistors (approximately  $200K\Omega$  each) that set the threshold and trigger levels at two-thirds and one-third respectively of V+. These levels can be adjusted by using the control terminal. When the trigger input is below the trigger level, the output is in the high state and sourcing 2mA. When the threshold input is above the threshold level at the same time the trigger input is above the trigger level, the internal flip-flop is reset, the output goes to the low state and sinks up to 10mA. The reset input overrides all other inputs and when it is active (reset voltage less than 1V), the output is in the low state. All four timers share the same control and reset pins so that timing functions are synchronized.

#### **FEATURES**

- High speed operation -- 2MHz typical oscillation at 5V
- Each discharge output sinking current: 40mA at 5V
- Guaranteed low operating supply voltage of 2 to 12V
- Each timer is functionally equivalent to NE555 with greatly expanded high and low frequency ranges
- · High speed, low power, monolithic CMOS technology
- Low supply current: 150μA typical
- Extremely low trigger, threshold and reset currents: 10pA typical
- Operates in both monostable and astable modes
- · Fixed 50% duty cycle or adjustable duty cycle
- · CMOS, NMOS and TTL compatible input/output
- · Low supply current spikes

#### **ORDERING INFORMATION** ("L" suffix denotes lead-free (RoHS))

Operating Temperature Range *

\* Contact factory for leaded (non-RoHS) or high temperature versions.

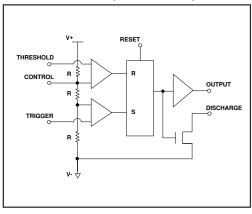

#### **APPLICATIONS.**

- High speed one-shot (monostable) pulse generation
- Precision timing
- Sequential timing
- · Long delay timer
- Pulse width and pulse position modulation
- Missing pulse detector
- Frequency divider
- · Synchronized timer

#### SYNCHRONIZED TIMING GENERATORS

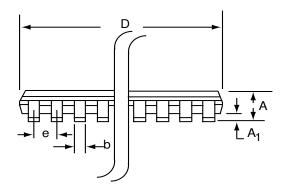

Timer 4 oscillates in free running mode ( 50 % Duty Cycle ) and drives the trigger inputs of timers 1,2,3, each with independently set time delays.
