ALM-11236

1710 MHz – 1850 MHz

Low Noise, High Linearity Amplifier Module
with Fail-Safe Bypass Feature

Data Sheet

Description

Avago Technologies' ALM-11236 is an easy-to-use GaAs MMIC Tower Mount Amplifier (TMA) LNA Module with low IL bypass path. The module has low noise and high linearity achieved through the use of Avago Technologies' proprietary 0.25 μm GaAs Enhancement-mode pHEMT process. All matching components are fully integrated within the module and the 50 ohm RF input and output pins are already internally AC-coupled. This makes the ALM-11236 extremely easy to use as the only external parts are DC supply bypass capacitors. For optimum performance at other bands, ALM-11036 (776-870 MHz), ALM-11136 (870-915 MHz) and ALM-11336 (1850-1980) are recommended. All ALM-11x36 share the same package and pin out configuration.
