

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

## DC – 50 GHz SPDT Switch

### Data Sheet

**Chip Size:** 930 x 630  $\mu\text{m}$  (36.6 x 24.8 mils)  
**Chip Size Tolerance:**  $\pm 10 \mu\text{m}$  ( $\pm 0.4$  mils)  
**Chip Thickness:**  $100 \pm 10 \mu\text{m}$  ( $4 \pm 0.4$  mils)  
**Pad Dimensions:**  $80 \times 80 \mu\text{m}$  ( $3.2 \times 3.2$  mils)

#### Description

Avago’s AMMC-2008 is a monolithic PHEMT SPDT switch with low insertion loss and high isolation from DC to 50 GHz. This MMIC is designed for general-purpose applications. For improved reliability and moisture protection, the die is passivated at the active areas. One series and two shunt PHEMTs per throw provide 2.0 dB insertion loss and 28 dB isolation at 40 GHz.

#### Absolute Maximum Ratings<sup>[1]</sup>

Symbol	Parameters/Conditions	Units	Min.	Max.
$V_{sel}$	Select Voltages 1 & 2	V	-8	+1.4
$P_{in}$	RF Input Power	dBm		+20
$T_b$	Die Backside Temperature	$^{\circ}\text{C}$		+140
$T_{stg}$	Storage Temperature	$^{\circ}\text{C}$	-65	+165
$T_{max}$	Max. Assembly Temp (60 sec max)	$^{\circ}\text{C}$		+300

#### Note:

1. Operation in excess of any one of these conditions may result in permanent damage to this device.

#### Features

- Wide frequency range: DC – 50 GHz
- Single pole double throw switch
- Low insertion loss: 2.3 dB (max.) at 40 GHz
- High isolation: 25 dB (min.) at 40 GHz
- Medium input power:  $P_{-1dB}$ : +14 dBm

#### Applications

- Instrumentation
- Communications
- Radar
- ECM
- EW
- Fiber optics
- Pulse modulation
- Port isolation
- Transfer switching
- High speed switching
- Replacement of mechanical switches

**Notes:**

1. Data measured in wafer form,  $T_{chuck} = 25^\circ\text{C}$ .
2. 100% on-wafer RF test is done at frequency = 2, 10, 20, 30 and 40 GHz, except as noted.
3. Typical Vsel switching speed measured using Pulse Generator Model PG5000A. Measurement limited to rise/fall time of Pulse Generator.

### Operation

The RF Input and Output ports may be DC or AC-coupled. If DC-coupled, the voltages on the Input and Output ports must be  $0 \pm 0.25$  volts for guaranteed switch performance.

### Assembly Techniques

The chip should be attached directly to the ground plane using electrically conductive epoxy<sup>[1,2]</sup>. For conductive epoxy, the amount should be just enough to provide a thin fillet around the bottom perimeter of the die. The ground plane should be free of any residue that may jeopardize electrical or mechanical attachment. Caution should be taken to not exceed the Absolute Maximum Rating for assembly temperature and time.

Thermosonic wedge bonding is the preferred method for wire attachment to the bond pads. The RF connections should be kept as short as possible to minimize inductance. Gold mesh or double-bonding with 0.7 mil gold wire is recommended.

Mesh can be attached using a 2 mil round tracking tool and a tool force of approximately 22 grams with an ultrasonic power of roughly 55 dB for a duration of  $76 \pm 8$  mS. A guided wedge at an ultrasonic power level of 64 dB can be used for the 0.7 mil wire. The recommended wire bond stage temperature is  $150 \pm 2^\circ\text{C}$ .

The chip is 100 mm thick and should be handled with care.

This MMIC has exposed air bridges on the top surface. Handle at edges or with a custom collet (do not pick up die with vacuum on die center.)

This MMIC is also static sensitive and ESD handling precautions should be taken.

For more information, see Avago Application Note 5228

#### Notes:

1. Ablebond 84-1 LM1 silver epoxy is recommended.
2. Eutectic attach is not recommended and may jeopardize reliability of the device.
