

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

Structure	Silicon Monolithic Bipolar IC
Appearance	36-USO Pin Plastic Package (USONF-36D)
Application	IC for Color TV
Function	4-Input AV Switch IC with RGB-YUV Converter

A	Absolute Maximum Ratings				
No.	Item	Symbol	Ratings	Unit	Note
1	Storage Temperature	Tstg	-55 ~ +150	°C	1
2	Operating Ambient Temperature	Topr	-20 ~ +70	°C	1
3	Operating Ambient Pressure	Popr	$1.013 \times 10^5 \pm 0.61 \times 10^5$	Pa	
4	Operating Constant Acceleration	Gopr	9810	m / s ²	
5	Operating Shock	Sopr	4900	m / s ²	
6	Power Supply Voltage	Vcc	14	V	
7	Power Supply Current	Icc	60	mA	
8	Power Dissipation	PD	840	mW	

Operating Supply Voltage Range	Vcc	8.1V ~ 9.9V
--------------------------------	-----	-------------

Note 1) The temperature of all items shall be Ta = 25°C except storage temperature and operating ambient temperature.

[I²C BUS]

Fig.1 Example of transmission message

For transmission messages, both SCL and SDA are transferred in the form of synchronized serial transmission. SCL is a clock of a specific frequency, and SDA indicates address data for controlling the receiving side and is transferred in parallel, being synchronized with SCL. Data is transferred in principle in 3 octets (bytes), and each one octet (one octet = 8bits) includes one acknowledge bit. Frame structure is described below.

- (a) Start Condition The receiver becomes possible to receive data when SDA changes from HI to LO while SCL is HI.
- (b) Stop Condition The receiver halts receiving when SDA changes from LO to HI while SCL is HI.
- (c) Slave Address This is an address which is determined for each device. If other device address is sent, receiving will be halted.
- (d) Sub Address This is an address which is determined for each function.
- (e) Data This is control data.
- (f) Acknowledge Bit This is a bit by which the master acknowledges that data was successfully received in each octet. Master sends the HI signal and the receiver sends back the LO signal as shown in Figure1 with dotted line, causing the master to acknowledge the reception by the receiver. If the LO signal is not returned, communication will be halted.

Except Start and Stop conditions, SDA does not change while SCL is HI.
