

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

(Description of test circuit and test method)

Test Circuit 1

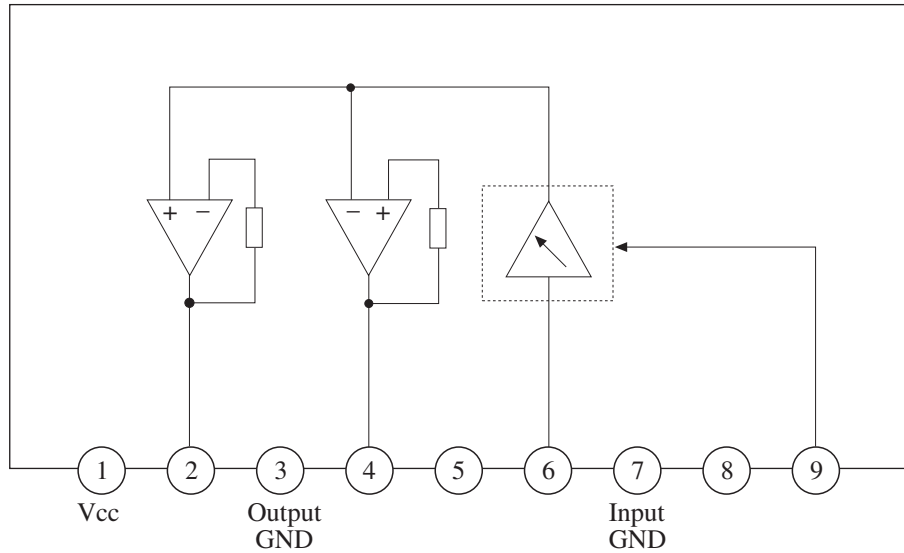

Note) If the standby pin is open or 0V, the IC is on standby state.  
 The IC is in the state of volume minimum if the Volume pin is ground.  
 The IC is in the state of volume maximum if the Volume pin is open.

**(Precautions for use)**

- 1) Make sure that the IC is free of any pin short-circuiting, ground short, and load short-circuiting.
- 2) Ground the radiation fin so that there will be no difference in electric potential between the radiation fin and ground.
- 3) The thermal protection circuit operates at a Tj of approximately 150°C. The thermal protection circuit is reset automatically when the temperature drops.
- 4) Make sure that the heat radiation design is effective enough if the Vcc is comparatively high or the IC operates high output power.
- 5) Connect only ground pin for signal sources to the signal GND pin of the amplifier on the previous stage.
- 6) The electric surge voltage for this IC low, therefore be extra careful when using the following pin (at 200pF):  
Pin 6=+180V, Pin 9=+100V
