imall

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from, Europe, America and south Asia, supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts, Customers Priority, Honest Operation, and Considerate Service", our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip, ALPS, ROHM, Xilinx, Pulse, ON, Everlight and Freescale. Main products comprise IC, Modules, Potentiometer, IC Socket, Relay, Connector. Our parts cover such applications as commercial, industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

RoHS Compliant

CFast 2H

CFast 2H Product Specifications

July 6, 2015

Version 1.2

Apacer Technology Inc.

1F, No.32, Zhongcheng Rd., Tucheng Dist., New Taipei City, Taiwan, R.O.C Tel: +886-2-2267-8000 Fax: +886-2-2267-2261 www.apacer.com

Features:

- Standard Serial ATA Interface
 - SATA Revision 3.1 compliance
 - SATA 6.0 Gbps interface speed
 - Backward compatible with SATA 1.5 and 3.0 Gbps interfaces
 - ATA-compatible command set
- Connector type
 - 7 + 17 pin female connector
- Power consumption (typical)*
 - Supply voltage: 3.3V
 - Active mode: 540 mA
 - Idle mode: 85 mA
- Performance*
 - Sustained read: Up to 515 MB/sec
 - Sustained write: Up to 145 MB/sec
- Capacity
 - 2, 4, 8, 16, 32, 64 GB
- NAND Flash Type: SLC
- MTBF: >2,000,000 hours

- Temperature ranges
 - Operating: Standard: 0°C to 70°C Wide: -40°C to 85°C
 - Storage: -40°C to 85°C
- Flash Management
 - Built-in hardware ECC
 - Static/dynamic wear-leveling
 - Flash bad-block management
 - S.M.A.R.T.
 - Power Failure Management
 - ATA Secure Erase
 - TRIM
- RoHS Compliant
- DEVSLP Supported

*The values presented in Power consumption and Performances are typical, and may vary depending on different settings and platforms.

1. General Description

Apacer CFast 2H is the latest enhancement of conventional CFast form factor that delivers various technological advantages. This new flash memory card comes with SATA 6.0 Gbps interface for higher performance and is compliant with standard CFast specifications. CFast 2H consists of SATA-based 7-pin signal segment and 17-pin for power and control purposes. It can offer moderate capacity and decent data transfer performance. For power efficiency, this new flash memory card leverages the technological benefits of SATA Revision 3.0 specifications. For data integrity, the CFast card is built with ECC engine correcting up to 72-bit. Together with its small form factor nature, Apacer CFast 2H is definitely the ideal solution to replace conventional PATA-based CompactFlash for applications in industrial computing systems, mobile computers and video processing instruments.

2. Functional Block

Apacer CFast 2H includes a single-chip SATA 6.0 Gbbps and the flash media. The controller integrates the flash management unit to support multi-channel, multi-bank flash arrays. Figure 2-1 shows the functional block diagram.

Figure 2-1 Apacer CFast block diagram

3. Pin Assignments

Table 3-1 describes CFast 2H signal segment, and Table 3-2, its power segment.

Figure 3-1 Pin Assignment

Pin	Туре	Description
S1	GND	Ground
S2	A+	SATA Differential
S3	A-	Signal Pair A
S4	GND	Ground
S5	В-	SATA Differential
S6	B+	Signal Pair B
S7	GND	Ground

Figure 3-2 SATA Cable / Connector Connection Diagram

The connector on the left represents the Host with TX/RX differential pairs connected to a cable while the connector on the right shows the Device with TX/RX differential pairs also connected to the cable. Notice also the ground path connecting the shielding of the cable to the Cable Receptacle.

4. Product Specification

4.1 Capacity

Capacity specification of the CFast 2H is available as shown in Table 4-1. It lists the specific capacity and the default numbers of heads, sectors and cylinders for each product line.

Capacity	Total bytes*	Cylinders	Heads	Sectors	Max LBA
2 GB	2,011,226,112	3,897	16	63	3,928,176
4 GB	4,011,614,208	7,773	16	63	7,835,184
8 GB	8,012,390,400	15,525	16	63	15,649,200
16 GB	16,013,942,784	16,383	16	63	31,277,232
32 GB	32,017,047,552	16,383	16	63	62,533,296
64 GB	64,023,257,088	16,383	16	63	125,045,424

Table 4-1:	Capacity s	pecifications
------------	------------	---------------

*Display of total bytes varies from file systems.

**Cylinders, heads or sectors are not applicable for these capacities. Only LBA addressing applies

LBA count addressed in the table above indicates total user storage capacity and will remain the same throughout the lifespan of the device. However, the total usable capacity of the CFast is most likely to be less than the total physical capacity because a small portion of the capacity is reserved for device maintenance usages.

4.2 Performance

Performance of CFast 2H product family is available as shown in Table 4-2.

Table 4-2: Performance table

Capacity Performance	2 GB	4 GB	8 GB	16 GB	32 GB	64 GB
Sustained Read (MB/s)	65	65	280	510	495	515
Sustained Write (MB/s)	35	50	80	140	140	145

Note: Performances results are measured by CrystalDiskMark under Windows 7 and may vary from host system configurations.

4.3 Environmental Specifications

Environmental specification of the CFast 2H follows the MIL-STD-810F testing standards, shown in Table 4-3.

Environment		Specification		
Operation		0°C to 70°C / -40°C to 85°C		
Temperature	Storage	-40°C to 85°C		
	Operation	40°C 93%RH		
Humidity	Storage	40°C 95%RH		
Vibration (Non-Operating)		80~2000Hz/20G (acceleration) ; 20~80Hz/1.52mn (displacement), X,Y, Z axis/30 min for each		
Shock (Non-Operating)		Half sine wave, 1500 G (X, Y, Z ; All 6 axis)		
Drop (non-operating)		110cm free fall, 6-face each unit		
Bending (non-operating)		≥20N, hold 1min/5times		
Torque (non-operating)		0.5N-m or ±2.5 degree, hold 5min/5times		

Table 4-3 Environmental specification

Note: this Environmental Specification table indicates the conditions for testing the device. Real world usages may affect the results.

4.4 Mean Time Between Failures (MTBF)

Mean Time Between Failures (MTBF) is predicted based on reliability data for the individual components in CFast 2H. Serving as statistical reference, the prediction result for CFast 2H is more than 2,000,000 hours.

4.5 Certification and Compliance

CFast 2H complies with the following standards

- CE
- FCC
- BSMI
- RoHS

5. Flash Management

5.1 Error Correction/Detection

Flash memory cells will deteriorate with use, which might generate random bit errors in the stored data. Thus, the CFast applies the BCH ECC Algorithm, which can detect and correct errors up to 72-bit in 1K byte data during Read process, ensure data been read correctly, as well as protect data from corruption.

5.2 Bad Block Management

Bad blocks are blocks that include one or more invalid bits, and their reliability is not guaranteed. Blocks that are identified and marked as bad by the manufacturer are referred to as "Initial Bad Blocks". Bad blocks that are developed during the lifespan of the flash are named "Later Bad Blocks". Apacer implements an efficient bad block management algorithm to detect the factory-produced bad blocks and manages any bad blocks that appear with use. This practice further prevents data being stored into bad blocks and improves the data reliability.

5.3 Wear Leveling

NAND Flash devices can only undergo a limited number of program/erase cycles, and in most cases, the flash media are not used evenly. If some areas get updated more frequently than others, the lifetime of the device would be reduced significantly. Thus, Wear Leveling technique is applied to extend the lifespan of NAND Flash by evenly distributing write and erase cycles across the media.

Apacer provides advanced Wear Leveling algorithm, which can efficiently spread out the flash usage through the whole flash media area. Moreover, by implementing both dynamic and static Wear Leveling algorithms, the life expectancy of the NAND Flash is greatly improved.

5.4 Power Failure Management

Power Failure Management is a mechanism to prevent data loss during unexpected power failure. When power outage occurs, the data that has not been written into NAND Flash is in risk. Thus, the purpose of this mechanism is to request the controller to transfer data to the cache. In this CFast 2H structure, SDR performs as a cache, and its sizes is 32MB. Only when the data is fully committed to the NAND flash will the controller send acknowledgement (ACK) to the host. Such implementation can prevent false-positive performance and the risk of power cycling issues.

Additionally, it is critical for a controller to shorten the time the in-flight data stays in the cache. Thus, this CFast 2H memory card applies an algorithm to reduce the amount of data resides in the cache to provide a better performance. This allows incoming data to only have a "pit stop" in the cache and then move to the NAND flash at once. If the flash is jammed due to particular file sizes (random 4K), the cache will be treated as an "organizer", consolidating incoming data into groups before written into the flash to improve write amplification.

5.5 ATA Secure Erase

ATA Secure Erase is an ATA disk purging command currently embedded in most of the storage drives. Defined in ATA specifications, (ATA) Secure Erase is part of Security Feature Set that allows storage drives to erase all user data areas. The erase process usually runs on the firmware level as most of the ATA-based storage media currently in the market are built-in with this command. ATA Secure Erase can securely wipe out the user data in the drive and protects it from malicious attack.

5.6 S.M.A.R.T.

SMART, an acronym for Self-Monitoring, Analysis and Reporting Technology, is an open standard that allows a hard disk drive to automatically detect its health and report potential failures. When a failure is recorded by SMART, users can choose to replace the drive to prevent unexpected outage or data loss. Moreover, SMART can inform users of impending failures while there is still time to perform proactive actions, such as copy data to another device.

Apacer devices use the standard SMART command B0h to read data out from the drive to activate our S.M.A.R.T. feature that complies with the ATA/ATAPI specifications. S.M.A.R.T. Attribute IDs shall include initial bad block count, total later bad block count, maximum erase count, average erase count, power on hours and power cycle. When the S.M.A.R.T. Utility running on the host, it analyzes and reports the disk status to the host before the device reaches in critical condition.

Note: attribute IDs may vary from product models due to various solution design and supporting capabilities.

Apacer memory products come with S.M.A.R.T. commands and subcommands for users to obtain information of drive status and to predict potential drive failures. Users can take advantage of the following commands/subcommands to monitor the health of the drive.

CODE	SMART SUBCOMMAND
D0H	READ DATA
D1H	READ ATTRIBUTE THRESHOLDS
D2H	ENABLE/DISABLE ATTRIBUTE AUTOSAVE
D4H	EXECUTE OFF-LINE IMMEDIATE
D5H	READ LOG (OPTIONAL)
D6H	WRITE LOG (OPTIONAL)
D8H	ENABLE OPERATIONS
D9H	DISABLE OPERATIONS
Dah	RETURN STATUS

175 (0xAF)	BAD CLUSTER TABLE COUNT
192 (0xC0)	UNEXPECTED POWER LOSS COUNT
194 (0xC2)	TEMPERATURE
241 (0xF1)	TOTAL SECTORS OF WRITE

5.7 TRIM

TRIM is a feature which helps improve the read/write performance and speed of Solid-State Drives (SSD). Unlike Hard Disk Drives (HDD), SSDs are not able to overwrite existing data, so the available space gradually becomes smaller with each use. With the TRIM command, the operating system can inform the SSD which blocks of data are no longer in use and can be removed permanently. Thus, the SSD will perform the erase action, which prevents unused data from occupying blocks all the time.

Table 6-1: Command set

7. Electrical Specification

7.1 Operating Voltage

Table 7-1 lists operating voltage of CFast 2H

Table 7-1: Operating volta	ae
----------------------------	----

Parameter	Symbol	Min	Тур	Max	Units
Power Supply	Vcc	3.135	3.3	3.465	V

7.2 Power Consumption

Table 7-2 lists power consumption of CFast 2H

Table 7-2	Power	consumpti	on (typical)	
		oonoampa		

Capacity Mode	2 GB	4 GB	8 GB	16 GB	32 GB	64 GB
Active (mA)	210	225	340	500	515	540
Standby (mA)	65	65	85	85	85	85

Note: Power consumption may vary from flash configurations and/or platform settings.

8. Physical Characteristics

8.1 Dimensions

FIGURE 8-1: Physical dimension

Unit: mm

9. Product Ordering Information

9.1 Product Code Designations

9.2 Valid Combinations

9.2.1 Standard Temperature

Capacity	AP/N
2GB	APCFA002GBAN-DT
4GB	APCFA004GBAN-DT
8GB	APCFA008GBAD-DT
16GB	APCFA016GBAD-DT
32GB	APCFA032GBAD-DT
64GB	APCFA064GBAD-DT

9.2.2 Wide Temperature

Capacity	AP/N
2GB	APCFA002GBAN-WDT
4GB	APCFA004GBAN-WDT
8GB	APCFA008GBAD-WDT
16GB	APCFA016GBAD-WDT
32GB	APCFA032GBAD-WDT
64GB	APCFA064GBAD-WDT

Revision History

Revision	Date	Description	Remark
1.0	11/28/2014	Official Released	
1.1	12/03/2014	Revised 5.6 SMART section	
1.2	07/06/2015	Revised product ordering information
