

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from, Europe, America and south Asia, supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts, Customers Priority, Honest Operation, and Considerate Service", our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip, ALPS, ROHM, Xilinx, Pulse, ON, Everlight and Freescale. Main products comprise IC, Modules, Potentiometer, IC Socket, Relay, Connector. Our parts cover such applications as commercial, industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

APDS-9120

Integrated Optical Proximity Sensors

AVAGO

Data Sheet

Description

Avago's APDS-9120 is an integrated optical proximity sensor that combines built-in signal conditioning and space-saving packaging technology.

This integrated sensor provides ease of use, as it eliminates design efforts required in implementing external LED drivers, signal filtering and amplification, sunlight and ambient light immunity and LED stuck high protection circuit.

APDS-9120 is designed to be a robust proximity sensor. It has artificial light immunity and operates in sunlight exposure. Both analog and/or digital output options are available.

To maximize power savings and battery life in applications such as portable or battery-operated devices, APDS-9120 has a shutdown mode feature. With an external limiting resistor, the LED current of the optical proximity sensors can be configured to various levels. The pulse width, burst rate, duty cycle and frequency can be controlled to minimize power consumption. These features make it ideal for low power mobile and handheld devices.

Application Support Information

The Application Engineering Group is available to assist you with the application design associated with APDS-9120 module. You can contact them through your local sales representatives for additional details.

Features

- Small form factor with conditioning IC, emitter and detector integrated into one single package
 - H1.1mm x W4.4mm x L4.4mm
- Low power consumption
 - LED pulse width control
 - Low shut down current
 - External LED drive-current control
- Shutdown current 1μA max
- Supply voltage: 2.4 V to 3.6 V
- Typical detection distance 30mm based on Kodak 18% grey card
- · Artificial light immunity
- · Operational in sunlight conditions
- Analog & Digital output available
 - Built in hysteresis comparator for digital output
- LED stuck Hi protection

Applications

- PDA and mobile phones
- Portable and Handheld devices
- Personal Computers/Notebooks
- Contactless Switches

Ordering Information

Part Number	Package Type	Shipping Option
APDS-9120-020	Tape & Reel	2500

Absolute Maximum Ratings (Ta=25°C)

Parameter	Symbol	Min.	Max.	Units	Conditions
Supply Voltage	V_{CC}	0	4.0	V	
Peak LED Current	ILEDpk	0	500	mA	Pulsed at 12.5% Duty-cycle
Reflow Soldering Temperature			260	°C	
Input Logic Voltage	VI	0	4.0	V	

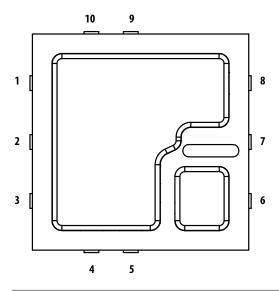

Recommended Operating Conditions

			10K	-		Incandescent
			5K			Fluorescent
			10K	-		Halogen

APDS-9120 I/O Pins Configuration Table

Pin	Symbol	Туре	Description
1	PFILT	Analog O/P	Analog Output Connect to integration circuit (R3 & C3)
2	NC2	-	No Connection
3	NC3	-	No Connection
4	V _C C	Supply	Voltage Supply
5	LEDON	Digital I/P	LED Driver Input LEDA will turn off when LEDON is stuck in high state for more than Max-PW
6	LEDK	LED Cathode	Connect to a current limiting resistor
7	ENBAR	Digital I/P	Power Down Enable ENB = 0 Normal mode operation ENB = 1 Shut down mode
8	NC8	-	No Connection
9	DOUT	Digital O/P	Digital Output An open drain output that requires a pull-up resistor of recommended value 10kΩ DOUT = Low when VPFILT > VTH DOUT = High when VPFILT < VTH
10	GND	Ground	Ground

MARKING DETAILS

Font type : Stroke Roman

Font size : 0.3mm Marking type : Laser Format : YWW

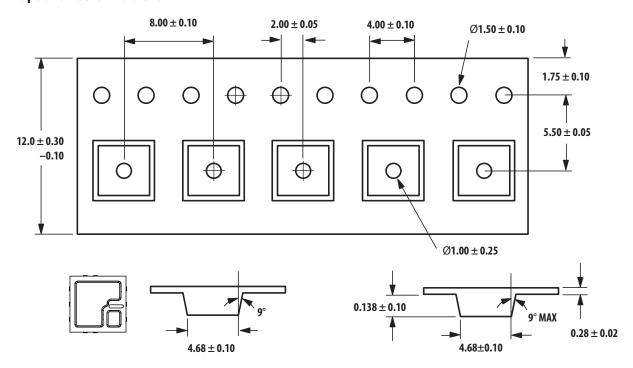

Y = Year (last digit)

WW = Week number (two digits)

Notes:

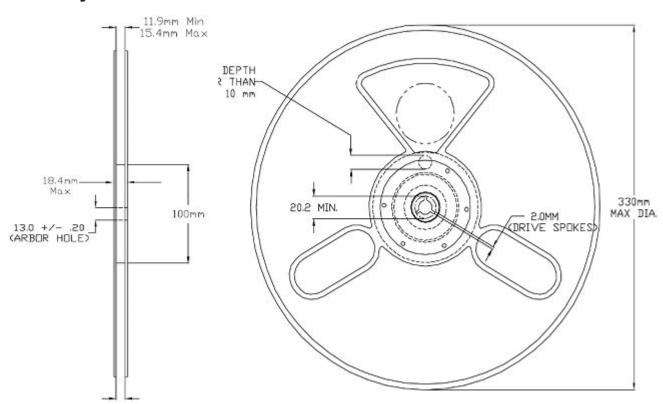

- 1. All dimensions are in millimeters. Dimension tolerance is ± 0.1 mm unless otherwise stated.
- 2. This package contains no lead.
- 3. Do NOT connect the bottom exposed pads.
- 4. No PCB circuitry under the device.

Tape and Reel Dimensions

Dimensions in mm

SMT Assembly Application Note

1.1 Solder Pad, Mask and Metal Stencil Aperture

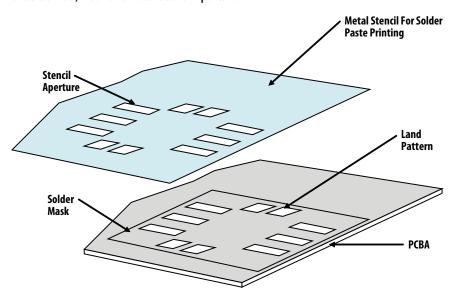

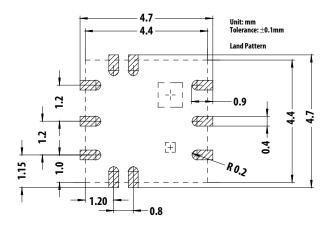

Figure 11. Stencil and PCBA

1.2 Recommended Land Pattern

Notes:

- 1. Do NOT connect the NC (no connect) pins.
- 2. Manual soldering on APDS-9120 is not recommended. Please refer to Recommended Reflow Profile for soldering.

Figure 12. Recommended Land Pattern

1.3 Recommended Metal Solder Stencil Aperture

It is recommended that a 0.11 mm thick stencil be used for solder paste printing. Aperture opening for shield pad is 0.8mm x 0.4mm (as per land pattern). This is to ensure adequate printed solder paste volume and no shorting.

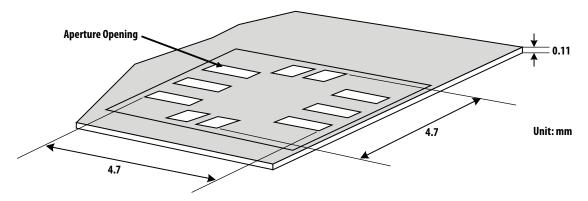

Figure 13. Solder Stencil Aperture

1.4 Adjacent Land Keepout and Solder Mask Areas

Adjacent land keep-out is the maximum space occupied by the unit relative to the land pattern. There should be no other SMD components within this area.

The minimum solder resist strip width required to avoid solder bridging adjacent pads is 0.2 mm.

Note: Wet/Liquid Photo-Imageable solder resist/mask is recommended.

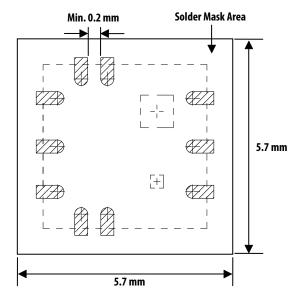

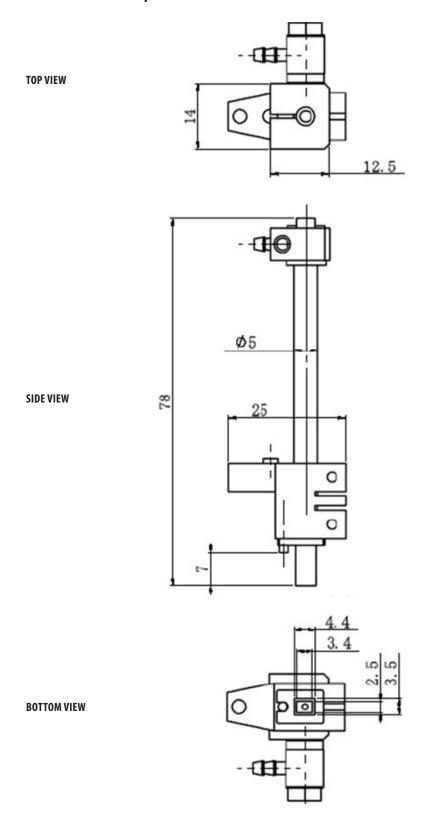

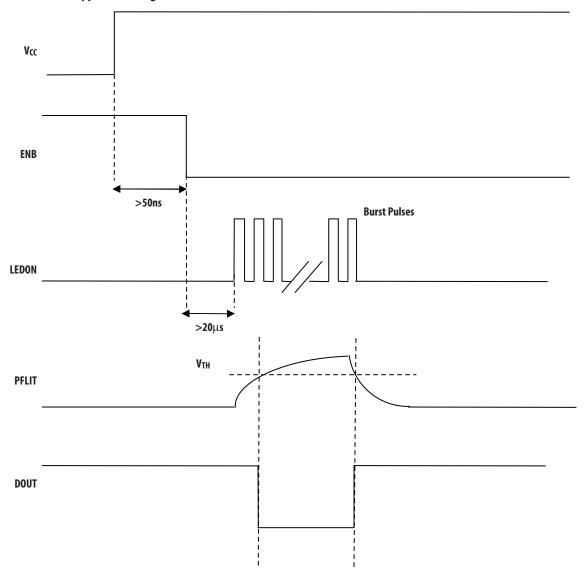

Figure 14. Adjacent Land Keepout and Solder Mask Areas

Recommended Pickup Nozzle

Dimension in mm

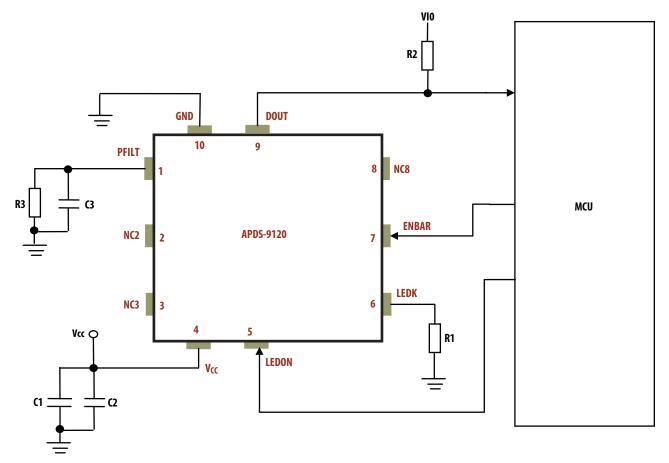

APDS-9120 Typical Timing Waveforms

Note:

Pulses at LEDON can only be activated at least 20us after ENB turn from high to low.

Typical Application Circuit

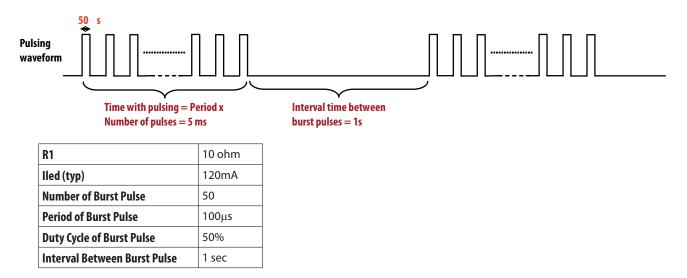

Note:

1. Do NOT connect the NC (no connect) pins

Recommended Operating Condition

(a) Recommended burst pulse to drive LEDON (pin5):

(b) Recommended components used:

Component	Recommended Values		
R1	10 ohm		
R2	10k ohm		
R3	1M ohm		
C 1	100nF, Ceramic		
C2	6.8μF, Tantalum		
G	3.3nF, Ceramic		

Note:

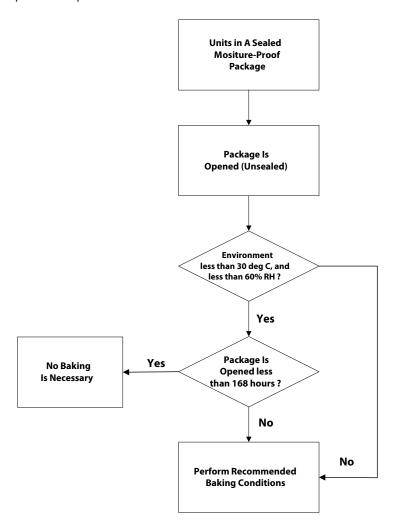

- 1. R3 and C3 are integrated circuit that can be adjusted to meet desired detectable distance
- Detectable distance is the distance when the object is first detected to trigger a "LOW" at DOUT (pin9).

Optical Window Design Reference

Moisture Proof Packaging

All APDS-9120 options are shipped in moisture proof package. Once opened, moisture absorption begins. This part is compliant to JEDEC MSL 3.

Baking Conditions:

Package	Temperature	Time	
In Reel	60⊠C	48 hours	
In Bulk	100⊠C	4 hours	

If the parts are not stored in dry conditions, they must be baked before reflow to prevent damage to the parts.

Baking should only be done once.

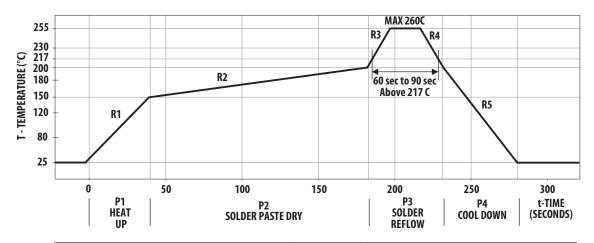

Recommended Storage Conditions:

Storage Temperature	100C to 300C
Relative Humidity	below 60% RH

Time from unsealing to soldering:

After removal from the bag, the parts should be soldered within 168 hours if stored at the recommended storage conditions. If times longer than 168 hours are needed, the parts must be stored in a dry box.

Recommended Reflow Profile

Symbol	ΔT	Maximum $\Delta T/\Delta time$ or Duration
P1, R1	25°C to 150°C	3°C/s
P2, R2	150°C to 200°C	100s to 180s
P3, R3 P3, R4	200°C to 260°C 260°C to 200°C	3°C/s -6°C/s
P4, R5	200°C to 25°C	-6°C/s
	> 217°C	60s to 120s
	260°C	_
	_	20s to 40s
	25°C to 260°C	8mins
	P1, R1 P2, R2 P3, R3 P3, R4	P1, R1 25°C to 150°C P2, R2 150°C to 200°C P3, R3 200°C to 260°C P3, R4 260°C to 200°C P4, R5 200°C to 25°C > 217°C 260°C -

The reflow profile is a straight-line representation of a nominal temperature profile for a convective reflow solder process. The temperature profile is divided into four process zones, each with different $\Delta T/\Delta time$ temperature change rates or duration. The $\Delta T/\Delta time$ rates or duration are detailed in the above table. The temperatures are measured at the component to printed circuit board connections.

In **process zone P1**, the PC board and component pins are heated to a temperature of 150°C to activate the flux in the solder paste. The temperature ramp up rate, R1, is limited to 3°C per second to allow for even heating of both the PC board and component pins.

Process zone P2 should be of sufficient time duration (100 to 180 seconds) to dry the solder paste. The temperature is raised to a level just below the liquidus point of the solder.

Process zone P3 is the solder reflow zone. In zone P3, the tem-

perature is quickly raised above the liquidus point of solder to 260°C (500°F) for optimum results. The dwell time above the liquidus point of solder should be between 60 and 90 seconds. This is to assure proper coalescing of the solder paste into liquid solder and the formation of good solder connections. Beyond the recommended dwell time the intermetallic growth within the solder connections becomes excessive, resulting in the formation of weak and unreliable connections. The temperature is then rapidly reduced to a point below the solidus temperature of the solder to allow the solder within the connections to freeze solid.

Process zone P4 is the cool down after solder freeze. The cool down rate, R5, from the liquidus point of the solder to 25°C (77°F) should not exceed 6°C per second maximum. This limitation is necessary to allow the PC board and component pins to change dimensions evenly, putting minimal stresses on the component.

It is recommended to perform reflow soldering no more than twice.
