

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

Resonant Mode Combi IGBT®

The Thunderbolt HS™ IGBT used in this resonant mode combi is based on thin wafer non-punch through (NPT) technology similar to the Thunderbolt® series, but trades higher $V_{CE(ON)}$ for significantly lower turn-on energy E_{off} . The low switching losses enable operation at switching frequencies over 100kHz, approaching power MOSFET performance but lower cost.

An extremely tight parameter distribution combined with a positive $V_{CE(ON)}$ temperature coefficient make it easy to parallel Thunderbolts HS™ IGBT's. Controlled slew rates result in very good noise and oscillation immunity and low EMI. The short circuit duration rating of 10 μ s make these IGBT's suitable for motor drive and inverter applications. Reliability is further enhanced by avalanche energy ruggedness. Combi versions are packaged with a high speed, soft recovery DL series diode.

Features

- Fast Switching with low EMI
- Very Low E_{OFF} for Maximum Efficiency
- Short circuit rated
- Low Gate Charge
- RoHS Compliant 
- Tight parameter distribution
- Easy paralleling
- Low Forward Diode Voltage (VF)
- Ultrasoft Recovery Diode

Typical Applications

- ZVS Phase Shifted Bridge
- Resonant Mode Switching
- Phase Shifted Bridge
- Welding
- Induction heating
- High Frequency SMPS

Absolute Maximum Ratings

Symbol	Parameter	Rating	Unit
I_{C1}	Continuous Collector Current $T_C = @ 25^\circ C$	54	A
I_{C2}	Continuous Collector Current $T_C = @ 100^\circ C$	30	
I_{CM}	Pulsed Collector Current ¹	113	
V_{GE}	Gate-Emitter Voltage	$\pm 30V$	V
SSOA	Switching Safe Operating Area	113	
t_{SC}	Short Circuit Withstand Time ³	10	μs

Thermal and Mechanical Characteristics

Symbol	Parameter	Min	Typ	Max	Unit
P_D	Total Power Dissipation $T_C = @ 25^\circ C$	-	-	250	W
$R_{\theta JC}$	Junction to Case Thermal Resistance	IGBT	-	0.50	$^\circ C/W$
		Diode		1.0	
$R_{\theta CS}$	Case to Sink Thermal Resistance, Flat Greased Surface	-	0.11	-	
T_J, T_{STG}	Operating and Storage Junction Temperature Range	-55	-	150	$^\circ C$
T_L	Soldering Temperature for 10 Seconds (1.6mm from case)	-	-	300	
W_T	Package Weight	-	0.22	-	
		-	5.9	-	g

 CAUTION: These Devices are Sensitive to Electrostatic Discharge. Proper Handling Procedures Should be Followed.

Static Characteristics

FOOT NOTE:

- ① Repetitive Rating: Pulse width and case temperature limited by maximum junction temperature.
- ③ Short circuit time: $V_{GE} = 15V, V_{CC} \leq 600V, T_j \leq 150^\circ C$
- ④ Pulse test: Pulse width < 380 μs , duty cycle < 2%
- ⑤ $C_{o(cr)}$ is defined as a fixed capacitance with the same stored charge as C_{oes} with $V_{CE} = 67\%$ of $V_{(BR)CES}$.
- ⑥ $C_{o(er)}$ is defined as a fixed capacitance with the same stored energy as C_{oes} with $V_{CE} = 67\%$ of $V_{(BR)CES}$. To calculate $C_{o(er)}$ for any value of V_{CE} less than $V_{(BR)CES}$, use this equation: $C_{o(er)} = -1.40E-7/V_{DS}^2 + 1.47E-8/V_{DS} + 5.95E-11$.
- ⑦ R_g is external gate resistance, not including internal gate resistance or gate driver impedance (MIC4452).
- ⑧ E_{on1} is the inductive turn-on energy of the IGBT only, without the effect of a commutating diode reverse recovery current adding to the IGBT turn-on switching loss. It is measured by clamping the inductance with a Silicon Carbide Schottky diode.
- ⑨ E_{on2} is the inductive turn-on energy that includes a commutating diode reverse recovery current in the IGBT turn-on energy.
- ⑩ E_{off} is the clamped inductive turn-off energy measured in accordance with JEDEC standard JESD24-1.
