

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

## 4x Multiplier EMI Reduction IC

### Product Description

The ASM3P2274 is a versatile Spread Spectrum Frequency Modulator designed specifically for a wide range of clock frequencies. It provides a 4x Spread Spectrum Modulated output from an input clock source.

The ASM3P2274A reduces electromagnetic interference (EMI) at the clock source, allowing system wide reduction of EMI of all clock dependent signals. The ASM3P2274A allows significant system cost savings by reducing the number of circuit board layers, ferrite beads and shielding that are traditionally required to pass EMI regulations.

The ASM3P2274A uses the most efficient and optimized modulation profile approved by the FCC and is implemented by using a proprietary all digital method.

The ASM3P2274A modulates the output of a single PLL in order to “spread” the bandwidth of a synthesized clock, and more importantly, decreases the peak amplitudes of its harmonics. This results in significantly lower system EMI compared to the typical narrow band signal produced by oscillators and most frequency generators. Lowering EMI by increasing a signal’s bandwidth is called ‘spread spectrum clock generation.’

### Features

- Generates a 4x EMI Optimized Clock Signal at the Output
- Integrated Loop Filter Components
- Operates with a 2.5/3.3 V Supply
- CMOS Design
- Input Frequency Range:
  - ◆ 12 MHz to 30 MHz for 2.5 V
  - ◆ 12 MHz to 30 MHz for 3.3 V
- Frequency Deviation: -1.5% (Typ) @ 66 MHz Output Frequency
- Available in TSOP-6 Package
- This Device is Pb-Free and is RoHS Compliant

### Applications

The ASM3P2274A is targeted towards all portable devices like MP3 players, MFP, LCD Panel Module and digital still cameras.

Pin#	Pin Name	Type	Description
1	PD	I	Power-Down Control Pin. Pull Low to Enable Power-Down Mode. Connect to VDD if Not Used
2	XOUT	O	Crystal Connection. If Using an External Reference, this Pin Must be Left Unconnected
3	XIN/CLKIN	I	Crystal Connection or External Reference Frequency Input. This Pin has Dual Functions. It can be Connected either to an External Crystal or an External Reference Clock
4	VDD	P	Power Supply for the Entire Chip
5	ModOUT	O	Spread Spectrum Clock Output (4x Output)
6	VSS	P	Ground Connection
