

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

## General Purpose, Form A, Solid State Relay (Photo MOSFET)

### (250V/0.2A/10Ω)

## Data Sheet

### Description

The ASSR-32XX Series consists of an AlGaAs infrared light-emitting diode (LED) input stage optically coupled to a high-voltage output detector circuit. The detector consists of a high-speed photovoltaic diode array and driver circuitry to switch on/off two discrete high voltage MOSFETs. The relay turns on (contact closes) with a minimum input current of 3mA through the input LED. The relay turns off (contact opens) with an input voltage of 0.8V or less.

The single channel configurations, ASSR-3210 and ASSR-3211, are equivalent to 1 Form A Electromechanical Relays (EMR), and the dual channel configuration, ASSR-3220, is equivalent to 2 Form A EMR. They are available in 4-pin SO, 6-pin DIP, 8-pin DIP and Gull Wing Surface Mount for DIP packages. Their electrical and switching characteristics are specified over the temperature range of -40°C to +85°C. They are used for general purpose switching of signals and low power AC/DC loads.

ASSR-3211 enables AC/DC and DC-only output connections. For DC-only connection, the output current,  $I_o$ , increases to 0.4A and the on-resistance,  $R_{(ON)}$  reduces to 2.5Ω.

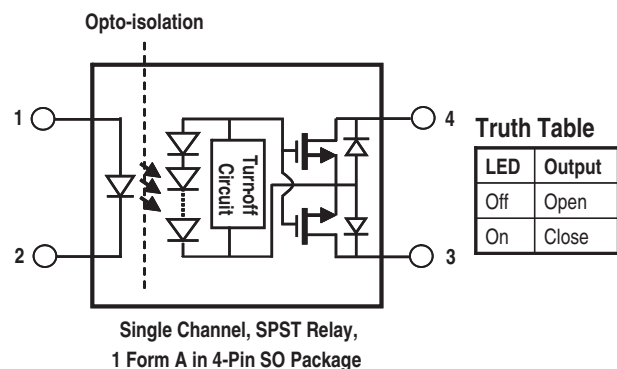

### Applications

- Telecommunication Switching
- Data Communications
- Industrial Controls
- Medical
- Security
- EMR / Reed Relay Replacement

### Features

- Compact Solid-State Bi-directional Signal Switch
- Single and Dual Channel Normally-off Single-Pole-Single-Throw (SPST) Relay
- 250V Output Withstand Voltage
- 0.2A or 0.4A Current Rating (See Schematic for ASSR-3211 Connections A & B)
- Low Input Current: CMOS Compatibility
- Low On-Resistance: 2Ω Typical for DC-only, 8Ω Typical for AC/DC
- Very High Output Off-state Impedance: 10 Teraohms Typical
- High Speed Switching: 0.25ms (Ton), 0.02ms (Toff) Typical
- High Transient Immunity: >1kV/μs
- High Input-to-Output Insulation Voltage (Safety and Regulatory Approvals)
  - 3750 Vrms for 1 min per UL1577
  - CSA Component Acceptance

**CAUTION:** It is advised that normal static precautions be taken in handling and assembly of this component to prevent damage and/or degradation which may be induced by ESD.

## Ordering Information

ASSR-xxxx is UL Recognized with 3750 Vrms for 1 minute per UL1577 and is approved under CSA Component Acceptance Notice #5.

Part number	Option	Package	Surface Mount	Gull Wing	Tape & Reel	Quantity
	RoHS Compliant					
ASSR-3210	-003E	SO-4	X			100 units per tube
	-503E		X		X	1500 units per reel
ASSR-3211	-001E	300mil DIP-6				50 units per tube
	-301E		X	X		50 units per tube

ASSR-3220	-002E	300 mil DIP-8				50 units per tube
	-302E		X	X		50 units per tube
	-502E		X	X	X	1000 units per reel

To order, choose a part number from the part number column and combine with the desired option from the option column to form an order entry.

Example 1:

ASSR-3211-501E to order product of 300mil DIP-6 Gull Wing Surface Mount package in Tape and Reel packaging and RoHS Compliant.

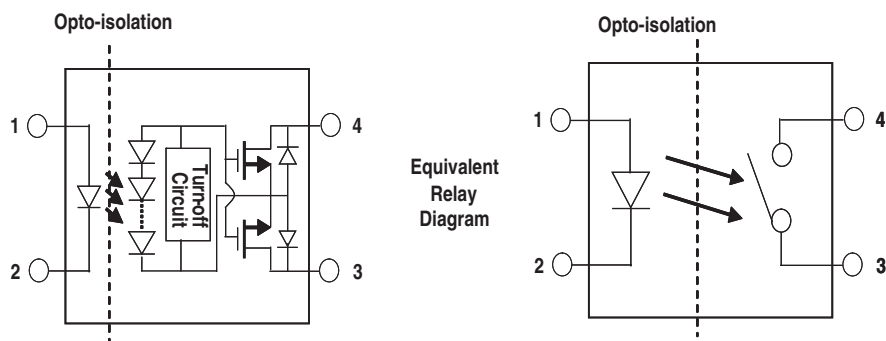

Example 2:

ASSR-3220-002E to order product of 300mil DIP-8 package in tube packaging and RoHS Compliant.

Option datasheets are available. Contact your Avago sales representative or authorized distributor for information.

Notes:

- For derating, refer to Figure 1 and 2.
- The voltage across the output terminals of the relay should not exceed this rated withstand voltage. Over-voltage protection circuits should be added in some applications to protect against over-voltage transients."
- Threshold to switch device is  $I_F \geq 0.5\text{mA}$ , however, for qualified device performance over temperature range, it is recommended to operate at  $I_F = 5\text{mA}$ . Refer to application information in next section of this datasheet.
- Device is considered as a two terminal device:
  - ASSR-3210 - pin 1, 2 shorted and pin 3, 4 shorted.
  - ASSR-3211 - pin 1, 2, 3 shorted and pin 4, 5, 6 shorted.
  - ASSR-3220 - pin 1, 2, 3, 4 shorted and pin 5, 6, 7, 8 shorted.
- The Input-Output Momentary Withstand Voltage is a dielectric voltage rating that should not be interpreted as an input-output continuous voltage rating. For the continuous voltage rating refer to the IEC/EN/DIN EN 60747-5-2 Insulation Characteristics Table (if applicable), your equipment level safety specification, or Avago Technologies Application Note 1074, "Optocoupler Input-Output Endurance Voltage."
- During the pulsed  $R_{(ON)}$  measurement ( $I_O$  duration  $\leq 30\text{ms}$ ), ambient ( $T_A$ ) and case temperature ( $T_C$ ) are equal.

## Applications Information

### On-Resistance and Derating Curves

The Output On-Resistance,  $R_{(ON)}$ , specified in this data sheet, is the resistance measured across the output contact when a pulsed current signal ( $I_O = 0.2\text{A}$ ) is applied to the output pins. The use of a pulsed signal ( $\leq 30\text{ms}$ ) implies that each junction temperature is equal to the ambient and case temperatures. The steady-state resistance,  $R_{ss}$ , on the other hand, is the value of the resistance measured across the output contact when a DC current signal is applied to the output pins for a duration sufficient to reach thermal equilibrium.  $R_{ss}$  includes the effects of the temperature rise in the device.

Derating curves are shown in Figures 1 and 2, specifying the maximum output current allowable for a given am-

bient temperature. The maximum allowable output current and power dissipation are related by the expression  $R_{ss} = P_o(\text{max}) / (I_o(\text{max}))^2$  from which  $R_{ss}$  can be calculated. Staying within the safe area assures that the steady state MOSFET junction temperature remains less than  $125^{\circ}\text{C}$ .

### Turn On Time and Turn Off Time Variation

The ASSR-32XX Series exhibits a very fast turn on and turn off time. Both the turn on and turn off time can be adjusted by choosing proper forward current as depicted in Figures 9 and 11. The changes of the turn on and turn off time with ambient temperature are also shown in Figures 10 and 12.
