

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from Europe, America and south Asia, supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts, Customers Priority, Honest Operation, and Considerate Service", our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip, ALPS, ROHM, Xilinx, Pulse, ON, Everlight and Freescale. Main products comprise IC, Modules, Potentiometer, IC Socket, Relay, Connector. Our parts cover such applications as commercial, industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

## Introduction

This document describes the Flash Evaluation Board dedicated to the AT89C5130/31A and the AT8xC5122D USB microcontrollers. This board is designed to enable an easy evaluation of the Mass Storage USB class using demonstration firmware (refer to firmware Guide). It must be plugged to a CPU board (AT89C5130/31A or AT8xC5122 D evaluation board).

---

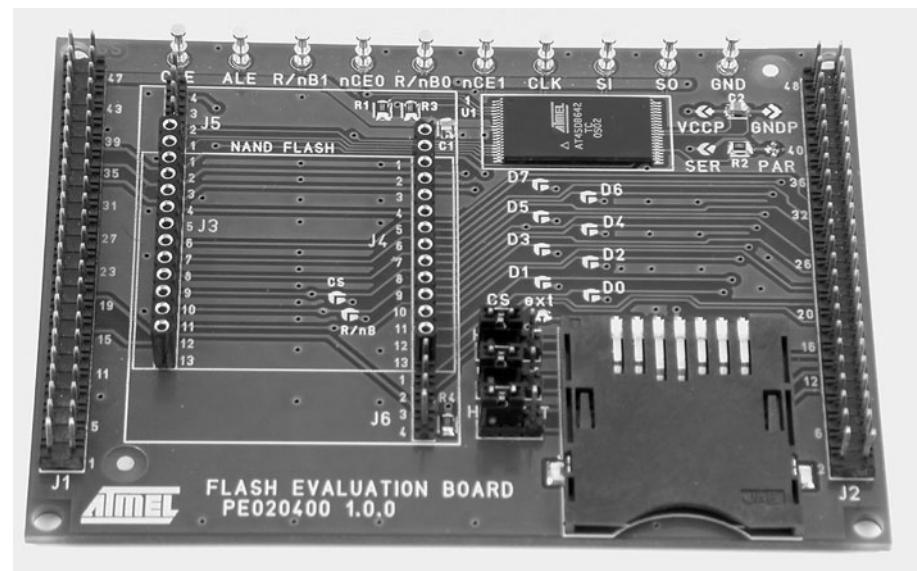

### 1.1

### Features

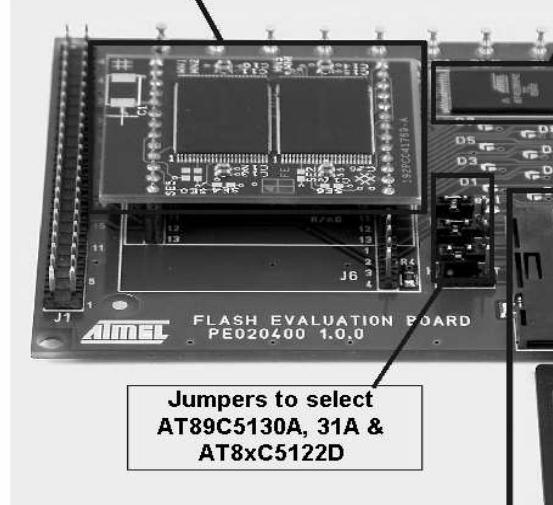

The Flash evaluation board provides the following features:

- Support the following microcontrollers :
  - AT89C5130A
  - AT89C5131A
  - AT8xC5122D
- No external power supply required
  - Power supplied by the USB line via the CPU board (AT89C5130/31A or AT8xC5122 D evaluation board)
- On board DataFlash memory (ATMEL AT45DB321B, 4MB)
- Support Nand Flash memory (MICRON MT29F2GO8AABWP, 256MB) - Add-on board
- Support Pluggable DataFlash Card (ATMEL AT45DCB004C, 4 MB)

### CPU board selection

As mentioned above, the Flash evaluation board can be used either with the AT89C5130/31A or AT8xC5122 D. The figure below show the jumpers state to enable each mode :

**Figure 2-1.** AT8xC5130/31AD Jumpers state

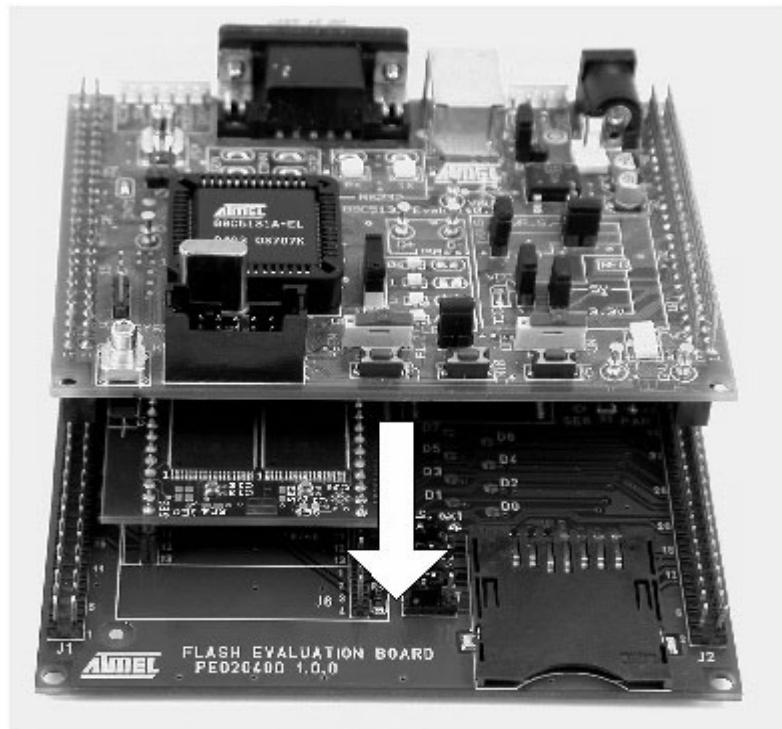

**Figure 2-2.** Jumpers state

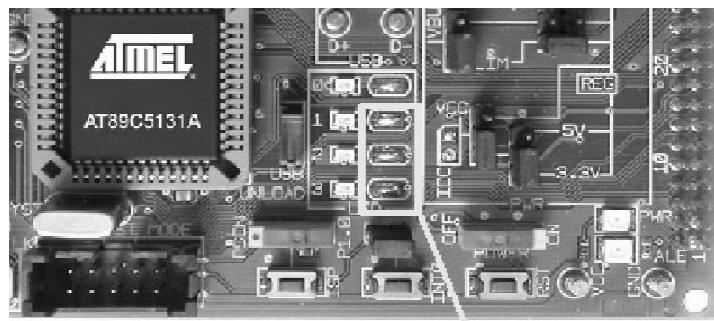

The figures below show how to plug the Flash evaluation board to AT89C5130/31A or AT8xC5122 D evaluation board (AT89STK05 or AT89STK03) :

**Figure 2-3.** Flash evaluation board plugged to AT89C5130/31A evaluation board (AT89STK05)

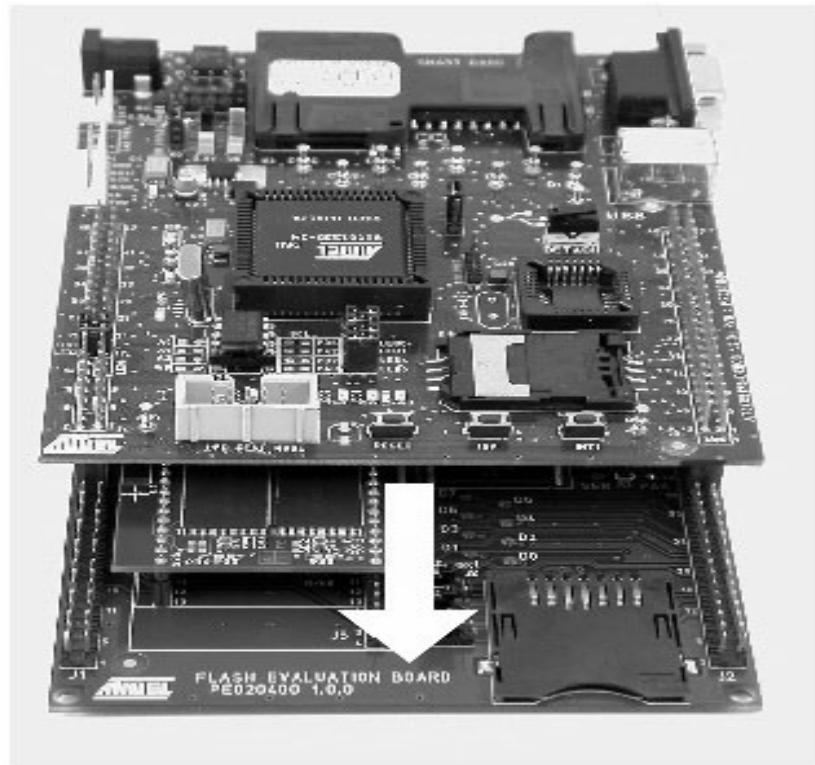

**Warning :** Before plugging the Flash Evaluation Board (AT89STK10) to the AT89C5130/31A evaluation board (AT89STK05), disconnect the three LEDs by removing the solder on solder straps. The figure below shows the location of these solder straps :

these solder straps

## 2.2 Power supply

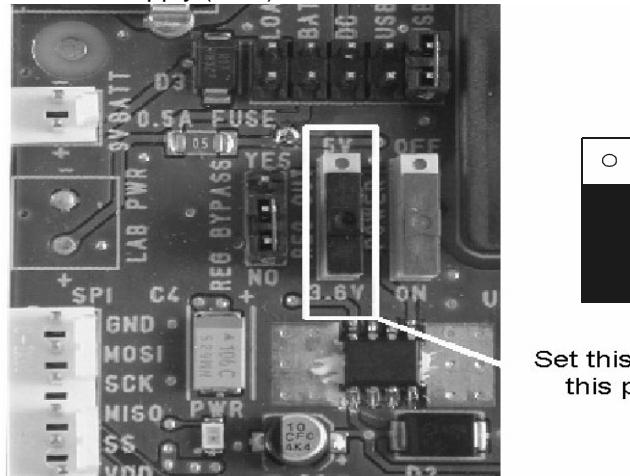

The Flash Evaluation Board power is supplied by the CPU board. The power supply must be set to 3.3V for the AT89C5131A Evaluation board and 3.6V for the AT8xC5122D Evaluation board. The figure 2.5 shows the different possible configurations of the AT89C5130/31A Evaluation board (AT89STK05) and the figure 2.6 shows how to select 3.6V on the AT8xC5122D Evaluation board in the 3.6V power supply configuration :

### Memory selection

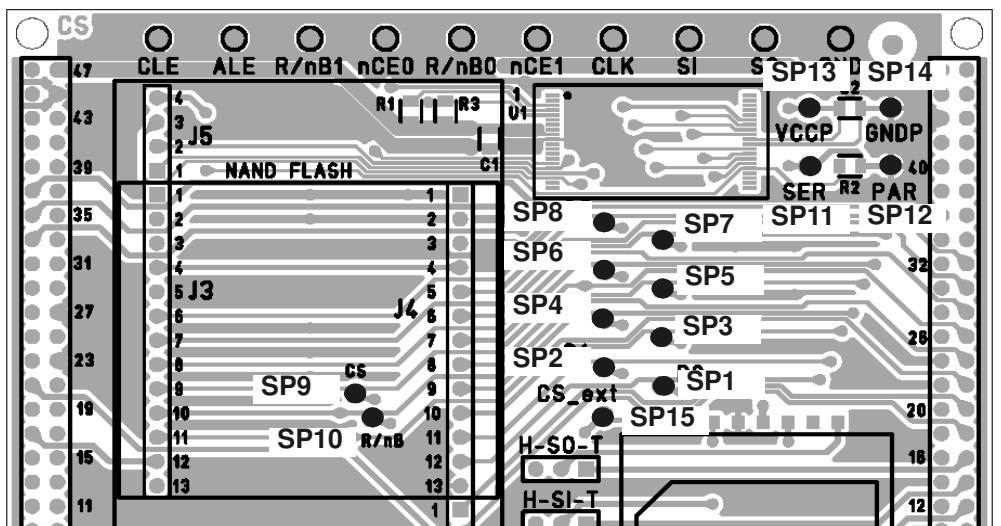

The Flash evaluation board supports three Flash memories (Pluggable Nand Flash, Pluggable DataFlash Card and On board DataFlash). Just one memory can be activated at the same time.

To configure the board with your specific usage, you have to put the solder straps in the right state.

**Figure 2-8.** Solder straps

**Figure 2-9.** Solder Straps location

The tables hereunder show the configuration related to each memory mode :
