

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from, Europe, America and south Asia, supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts, Customers Priority, Honest Operation, and Considerate Service", our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip, ALPS, ROHM, Xilinx, Pulse, ON, Everlight and Freescale. Main products comprise IC, Modules, Potentiometer, IC Socket, Relay, Connector. Our parts cover such applications as commercial, industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

Features

- Industry-standard Architecture
 - Emulates Many 24-pin PALs®
 - Low-cost Easy-to-use Software Tools
- High-speed Electrically-erasable Programmable Logic Devices
 - 7.5 ns Maximum Pin-to-pin Delay
- Several Power Saving Options

Device	I _{CC} , Standby	I _{CC} , Active
ATF20V8B	50 mA	55 mA
ATF20V8BQ	35 mA	40 mA
ATF20V8BQL	5 mA	20 mA

- CMOS and TTL Compatible Inputs and Outputs
- Input and I/O Pull-up Resistors
- Advanced Flash Technology
 - Reprogrammable
 - 100% Tested
- High-reliability CMOS Process
 - 20 Year Data Retention
 - 100 Erase/Write Cycles
 - 2,000V ESD Protection
 - 200 mA Latchup Immunity
- Commercial and Industrial Temperature Ranges
- Dual-in-line and Surface Mount Packages in Standard Pinouts
- PCI-Compliant
- Green Package Options (Pb/Halide-free/RoHS Complant) Available

Highperformance EE PLD

ATF20V8BQ ATF20V8BQL

Rev. 0407J-07/06

Description

The ATF20V8B is a high-performance CMOS (electrically-erasable) programmable logic device (PLD) that utilizes Atmel's proven electrically-erasable Flash memory technology. Speeds down to 7.5 ns and power dissipation as low as 10 mA are offered. All speed ranges are specified over the full 5V \pm 10% range for industrial temperature ranges, and 5V \pm 5% for commercial temperature ranges.

Several low-power options allow selection of the best solution for various types of power-limited applications. Each of

these options significantly reduces total system power and enhances system reliability.

The ATF20V8Bs incorporate a superset of the generic architectures, which allows direct replacement of the 20R8 family and most 24-pin combinatorial PLDs. Eight outputs are each allocated eight product terms. Three different modes of operation, configured automatically with software, allow highly complex logic functions to be realized.

Absolute Maximum Ratings*

Temperature Under Bias55°C to +125°C
Storage Temperature65°C to +150°C
Voltage on Any Pin with Respect to Ground2.0V to +7.0V ⁽¹⁾
Voltage on Input Pins with Respect to Ground During Programming2.0V to +14.0V ⁽¹⁾
Programming Voltage with Respect to Ground2.0V to +14.0V ⁽¹⁾

*NOTICE:

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

Note:

Minimum voltage is -0.6V DC which may undershoot to -2.0V for pulses of less than 20 ns.Maximum output pin voltage is V_{CC} + 0.75V DC which may overshoot to 7.0V for pulses of less than 20 ns.

DC and AC Operating Conditions

	Commercial	Industrial
Operating Temperature (Ambient)	0°C - 70°C	-40°C - 85°C

Note: 1. See ordering information for valid part numbers and speed grades.

- 2. Shaded -25 parts are obsolete with a last-time buy date of August 19, 1999.
- 3. Shaded -7 and -15 parts are obsolete with a last-time buy date of September 30, 2006.

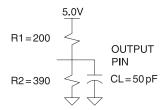

Input Test Waveforms and Measurement Levels

 $t_{\rm R}, t_{\rm F} < 5 \text{ ns} (10\% \text{ to } 90\%)$

Output Test Loads

Commercial

Pin Capacitance

 $f = 1 \text{ MHz}, T = 25^{\circ}C^{(1)}$

	Тур	Max	Units	Conditions
C _{IN}	5	8	pF	$V_{IN} = 0V$
C _{OUT}	6	8	pF	$V_{OUT} = 0V$

Note: 1. Typical values for nominal supply voltage. This parameter is only sampled and is not 100% tested.

Power-up Reset

The registers in the ATF20V8Bs are designed to reset during power-up. At a point delayed slightly from V_{CC} crossing V_{RST} , all registers will be reset to the low state. As a result, the registered output state will always be high on power-up. This feature is critical for state machine initialization. However, due to the asynchronous nature of reset and the uncertainty of how V_{CC} actually rises in the system, the following conditions are required:

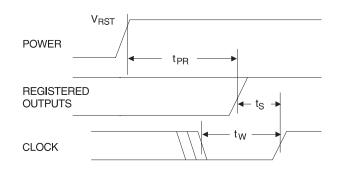

- 1. The V_{CC} rise must be monotonic,
- 2. After reset occurs, all input and feedback setup times must be met before driving the clock pin high, and
- 3. The clock must remain stable during t_{PR}.

Preload of Registered Outputs

The ATF16V8B's registers are provided with circuitry to allow loading of each register with either a high or a low. This feature will simplify testing since any state can be forced into the registers to control test sequencing. A JEDEC file with preload is generated when a source file with vectors is compiled. Once downloaded, the JEDEC file preload sequence will be done automatically by most of the approved programmers after the programming.

Electronic Signature Word

There are 64 bits of programmable memory that are always available to the user, even if the device is secured. These bits can be used for user-specific data.

Parameter	Description	Тур	Max	Units
t _{PR}	Power-up Reset Time	600	1,000	ns
V _{RST}	Power-up Reset Voltage	3.8	4.5	٧

Security Fuse Usage

A single fuse is provided to prevent unauthorized copying of the ATF20V8B fuse patterns. Once programmed, fuse verify and preload are inhibited. However, the 64-bit User Signature remains accessible.

The security fuse should be programmed last, as its effect is immediate.

Programming/Erasing

Programming/erasing is performed using standard PLD programmers. For further information, see the Configurable Logic Databook, section titled, "CMOS PLD Programming Hardware and Software Support."

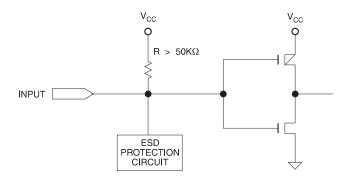

Input and I/O Pull-ups

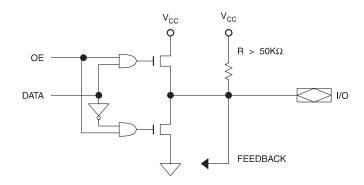

All ATF20V8B family members have internal input and I/O pull-up resistors. Therefore, whenever inputs or I/Os are not being driven externally, they will float to $V_{\rm CC}$. This ensures that all logic array inputs are at known states.

These are relatively weak active pull-ups that can easily be overdriven by TTL-compatible drivers (see input and I/O diagrams below).

Input Diagram

I/O Diagram

Functional Logic Diagram Description

The Logic Option and Functional Diagrams describe the ATF20V8B architecture. Eight configurable macrocells can be configured as a registered output, combinatorial I/O, combinatorial output, or dedicated input.

The ATF20V8B can be configured in one of three different modes. Each mode makes the ATF20V8B look like a different device. Most PLD compilers can choose the right mode automatically. The user can also force the selection by supplying the compiler with a mode selection. The determining factors would be the usage of register versus combinatorial outputs and dedicated outputs versus outputs with output enable control.

The ATF20V8B universal architecture can be programmed to emulate many 24-pin PAL devices. These architectural

subsets can be found in each of the configuration modes described in the following pages. The user can download the listed subset device JEDEC programming file to the PLD programmer, and the ATF20V8B can be configured to act like the chosen device. Check with your programmer manufacturer for this capability.

Unused product terms are automatically disabled by the compiler to decrease power consumption. A security fuse, when programmed, protects the content of the ATF20V8B. Eight bytes (64 fuses) of User Signature are accessible to the user for purposes such as storing project name, part number, revision, or date. The User Signature is accessible regardless of the state of the security fuse.

Compiler Mode Selection

	Registered	Complex	Simple	Auto Select
ABEL, Atmel-ABEL	P20V8R	P20V8C	P20V8	P20V8
CUPL	G20V8MS	G20V8MA	G20V8	G20V8A
LOG/iC	GAL20V8_R ⁽¹⁾	GAL20V8_C7 ⁽¹⁾	GAL20V8_C8 ⁽¹⁾	GAL20V8
OrCAD-PLD	"Registered"	"Complex"	"Simple"	GAL20V8
PLDesigner	P20V8	P20V8	P20V8	P20V8
Tango-PLD	G20V8	G20V8	G20V8	G20V8

Note: 1. Only applicable for version 3.4 or lower.

ATF20V8B Registered Mode

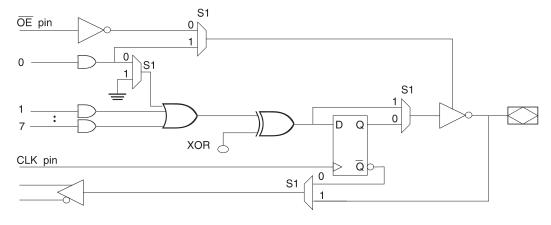

PAL Device Emulation/PAL Replacement. The registered mode is used if one or more registers are required. Each macrocell can be configured as either a registered or combinatorial output or I/O, or as an input. For a registered output or I/O, the output is enabled by the $\overline{\text{OE}}$ pin, and the register is clocked by the CLK pin. Eight product terms are allocated to the sum term. For a combinatorial output or I/O, the output enable is controlled by a product term, and seven product terms are allocated to the sum term. When

the macrocell is configured as an input, the output enable is permanently disabled.

Any register usage will make the compiler select this mode. The following registered devices can be emulated using this mode:

20R8 20RP820R6 20RP620R4 20RP4

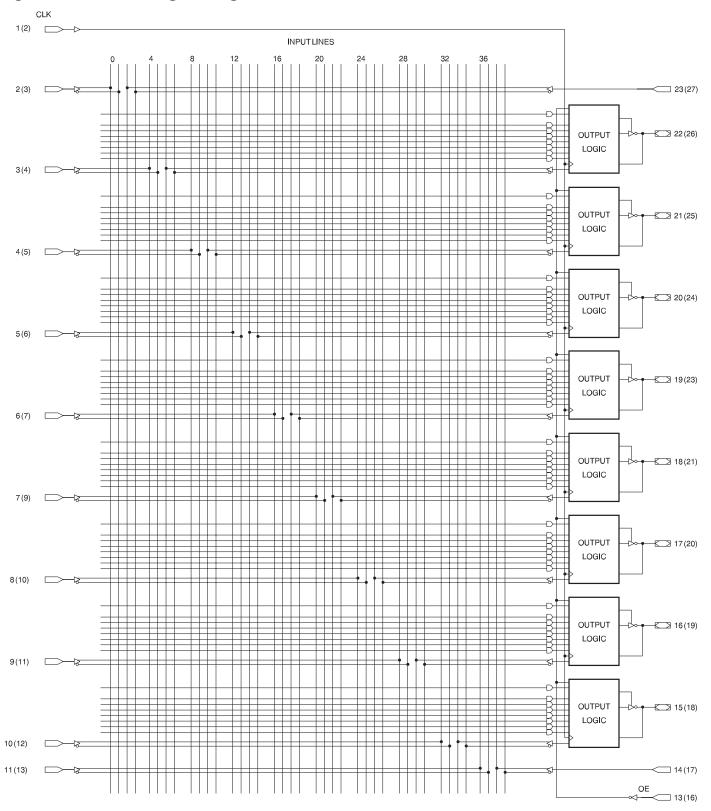

Registered Mode Operation

Registered Mode Logic Diagram

ATF20V8B Complex Mode

PAL Device Emulation/PAL Replacement. In the complex Mode, combinatorial output and I/O functions are possible. Pins 1 and 11 are regular inputs to the array. Pins 13 through 18 have pin feedback paths back to the AND-array, which makes full I/O capability possible. Pins 12 and 19 (outermost macrocells) are outputs only. They do not have input capability. In this mode, each macrocell has seven product terms going to the sum term and one product term enabling the output.

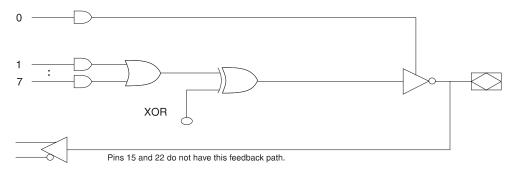

Combinatorial applications with an OE requirement will make the compiler select this mode. The following devices can be emulated using this mode:

20L8

20H8

20P8

Complex Mode Operation

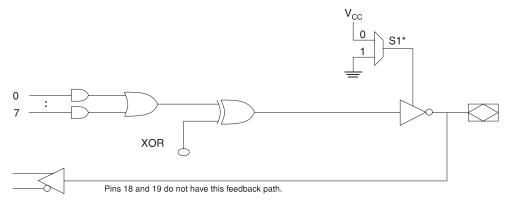

ATF20V8B Simple Mode

PAL Device Emulation/PAL Replacement. In the Simple Mode, 8 product terms are allocated to the sum term. Pins 15 and 16 (center macrocells) are permanently configured as combinatorial outputs. Other macrocells can be either inputs or combinatorial outputs with pin feedback to the AND-array. Pins 1 and 11 are regular inputs.

The compiler selects this mode when all outputs are combinatorial without OE control. The following simple PALs can be emulated using this mode:

14L8 14H8 14P8 16L6 18H6 16P6 18L4 18H4 18P4 20L2 20H2 20P2

Simple Mode Option

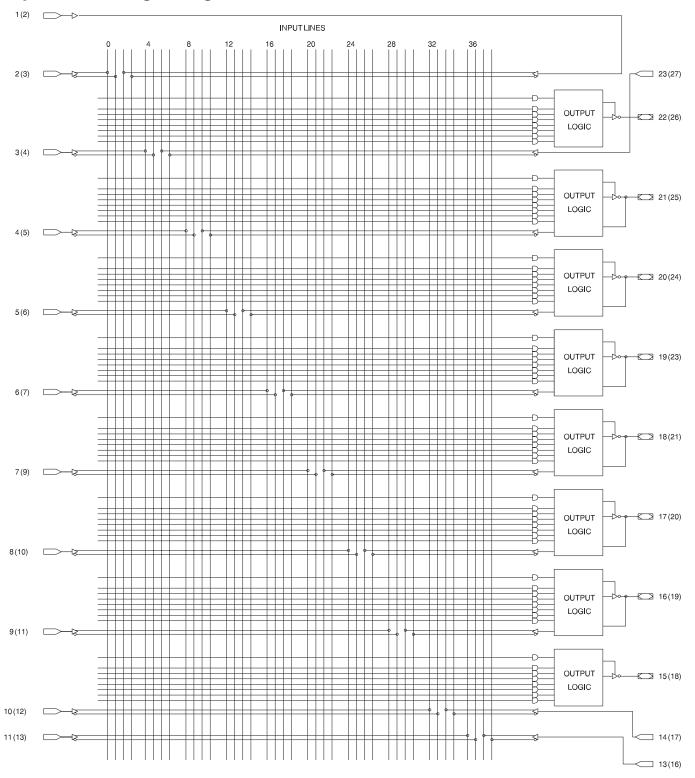

^{* -} Pins 18 and 19 are always enabled.
