Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

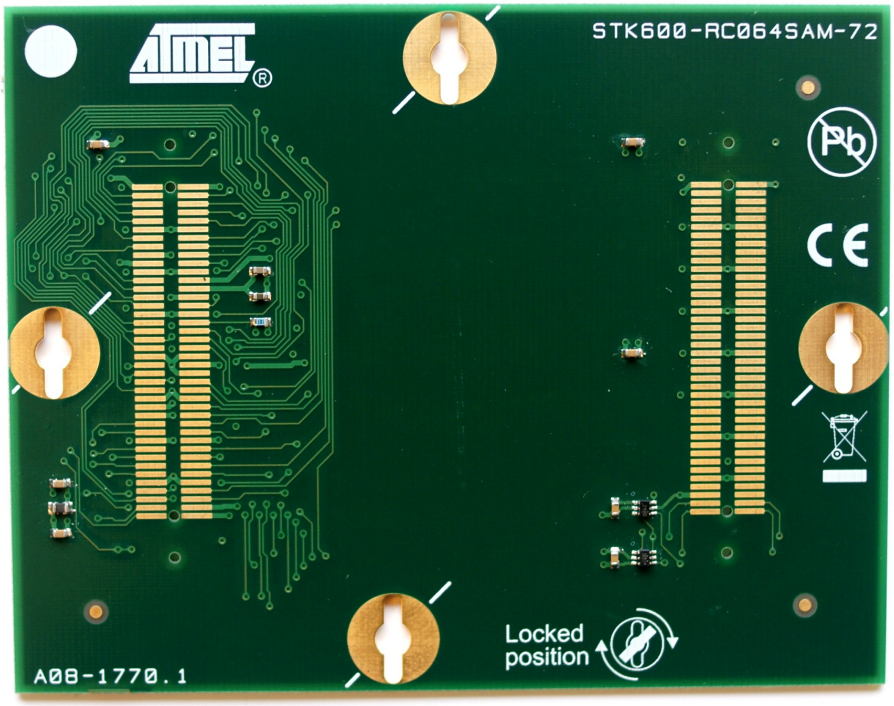
USER GUIDE

STK600-RC064SAM-72



Description

The Atmel® STK®600-RC064SAM-72 (STK600-RC72) is a routing card to support the 64-pin version of the Atmel SAM D20 ARM® Cortex™-M0+ based microcontroller on STK600. The STK600 does not support programming of the SAM D20. However, it does work as a breakout board for IO-pins and programming interface, as well as being able to power the device and provide clock signals.

Table of Contents

Description 1

1. Getting Started 3
   - 1.1. Card Stack 3
   - 1.2. Board Settings 3
   - 1.3. Connections 3

2. Document Revision History 5

1. Getting Started

1.1 Card Stack

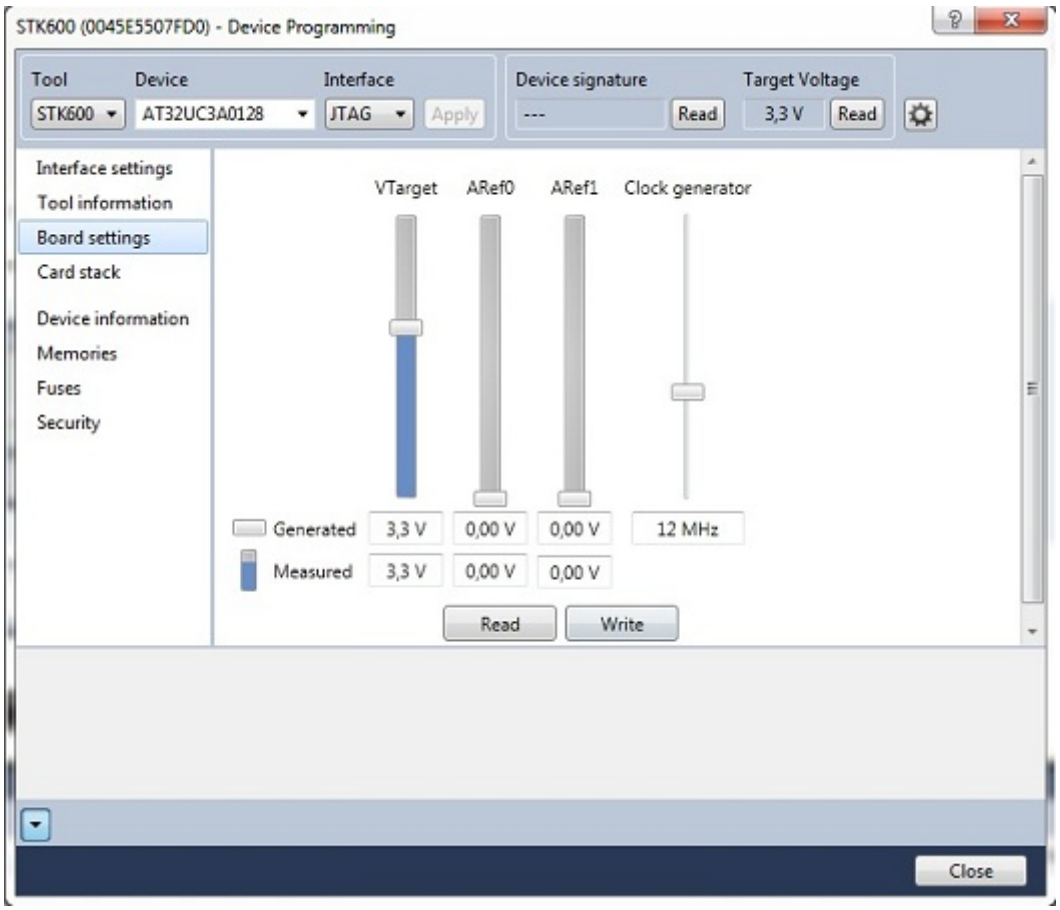
The STK600-RC064SAM-72 must be used together with an STK600. In addition a socket board is required. Depending on the package type of the device, either of STK600-TQFP64-2 and STK600-QFN64 can be used. See the STK600 User Guide for instructions on assembling the card stack.

Once the card stack is assembled, the STK600 can be powered. The status LED should be steady green. If it is blinking orange, it might be necessary to let Atmel Studio update the card stack information on the STK600. This is done automatically when connecting to STK600 in the programming dialog.

1.2 Board Settings

The programming dialog of Atmel Studio is used to set the voltages and clock frequency. Since programming of the SAM D20 is not supported by STK600, it will not show in the device list. Therefore, when connecting to STK600 in the programming dialog, it is necessary to select a different device than SAM D20. Any device and interface (e.g. AT32UC3A0128 and JTAG) from the lists will work for setting the voltage and clock. After connecting, go to board settings to access the voltage and clock settings. Move the sliders and click "Write" to change the values. Note that all voltages are limited to 3.6V.

Figure 1-1. Board settings



1.3 Connections

The SWD interface of the SAM D20 is routed to the 10-pin JTAG connector and the 6-pin ISP connector of the STK600. The pinout is shown in the figure below, in addition to the pinout for the SAM-ICE™.

Figure 1-2. Tool Pinout

1 VTREF	2 NC
3 NC	4 Gnd
5 NC	6 Gnd
7 SWDIO	8 Gnd
9 SWCLK	10 Gnd
11 NC	12 Gnd
13 SWO	14 Gnd
15 RESET	16 Gnd
17 NC	18 Gnd
19 NC	20 Gnd

SAM-ICE

1 SWDIO	2 VCC
3 SWCLK	4 NC
5 RESET	6 Gnd

STK600 ISP

1 SWCLK	2 Gnd
3 NC	4 VCC
5 SWDIO	6 RESET
7 NC	8 NC
9 NC	10 Gnd

STK600 JTAG

It is necessary to use single wires to connect the SAM-ICE to the STK600 headers. The picture below is a reference for making the connections.
