

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

AVO250-48S28B

250 Watts

Eighth-brick Converter

Total Power: 250 Watts
Input Voltage: 36 to 75 Vdc
of Outputs: Single

Special Features

- Delivering up to 9A output current
- Ultra-high efficiency 93% typ. at full load
- Wide input range: 36V ~ 75V
- Excellent thermal performance
- No minimum load requirement
- Basic isolation
- High power density
- Low output noise
- Reflow soldering-able
- RoHS 6 compliant
- Remote control function
- Remote output sense
- Trim function: 64% ~ 116%
- Input under voltage lockout
- Output over current protection
- Output short circuit protection
- Output over voltage protection
- Over temperature protection
- Industry standard eighth-brick pin-out outline
- Baseplate

Safety

IEC/EN/UL/CSA 60950
CE Mark
UL/TUV
EN55022 Class A

Product Descriptions

The AVO250-48S28B is a single output DC/DC converter with standard eighth-brick form factor and pin configuration. It delivers up to 9A output current with 28V output.

Ultra-high 93% efficiency and excellent thermal performance makes it an ideal choice for using in telecommunication and datacom applications and can operate under an ambient temperature range of -40 °C ~ +85 °C, with full power available when the baseplate of the unit is kept below 100 °C.

Applications

This family of units has been specifically designed to support the rigors of the supply of power to RF Power Amplifiers in small-cell, low power applications in Telecommunication applications.

The small form-factor, baseplate construction are exceptionally well suited for such applications where small space and contact-cooling are essential attributes required of the DCDC converter. Add this to the wide output trim range of 18V to 32V means that this unit is extremely versatile in the applications that it can address.

Typically, this unit is used along side a member of the AVD (1/16th brick) family of DCDC converters to provide the lower voltage required to supply power to digital circuitry present in such RF Power-Amplifier applications.

Model Numbers

| Standard | Output Voltage | Structure | Remote ON/OFF logic | RoHS Status |

Absolute Maximum Ratings

Stress in excess of those listed in the “Absolute Maximum Ratings” may cause permanent damage to the power supply. These are stress ratings only and functional operation of the unit is not implied at these or any other conditions above those given in the operational sections of this TRN. Exposure to any absolute maximum rated condition for extended periods may adversely affect the power supply’s reliability.

Table 1. Absolute Maximum Ratings:

| Parameter | Model | Symbol | Min | Typ | Max | Unit |
|---|-------|-------------|------|-----|------|------|
| Input Voltage Operating -Continuous Non-operating -100mS | All | $V_{IN,DC}$ | - | - | 80 | Vdc |

Environmental Specifications

EMC Immunity

AVO200-48S05-6L power supply is designed to meet the following EMC immunity specifications:

Table 4. Environmental Specifications:

| Document | Criteria | Description |
|---------------------------|----------|---|
| EN55022, Class A Limits | A | Conducted and Radiated EMI Limits |
| IEC/EN 61000-4-2, Level 3 | B | Electromagnetic Compatibility (EMC) - Testing and measurement techniques - Electrostatic discharge immunity test. Enclosure Port |
| IEC/EN 61000-4-6, Level 2 | A | Electromagnetic Compatibility (EMC) - Testing and measurement techniques, Continuous Conducted Interference. DC input port |
| IEC/EN 61000-4-4, Level3 | B | Electromagnetic Compatibility (EMC) - Testing and measurement techniques, Electrical Fast Transient. DC input port. |
| IEC/EN 61000-4-5 | B | Electromagnetic Compatibility (EMC) - Testing and measurement techniques, Immunity to surges - 600V common mode and 600V differential mode for DC ports |
| EN61000-4-29 | B | Electromagnetic Compatibility (EMC) - Testing and measurement techniques, Voltage Dips and short interruptions and voltage variations. DC input port. |

Criterion A: Normal performance during and after test.

Criterion B: For EFT and surges, low-voltage protection or reset is not allowed. Temporary output voltage fluctuation ceases after the disturbances ceases, and from which the EUT recovers its normal performance automatically.

For dips and ESD, output voltage fluctuation or reset is allowed during the test, but recovers to its normal performance automatically after the disturbance ceases.

.Criterion C: Temporary loss of output, the correction of which requires operator intervention.

Criterion D: Loss of output which is not recoverable, owing to damage to hardware.

Safety Certifications

The AVO250-48S28B power supply is intended for inclusion in other equipment and the installer must ensure that it is in compliance with all the requirements of the end application. This product is only for inclusion by professional installers within other equipment and must not be operated as a stand alone product.

Table 5. Safety Certifications for AVO200-48S28-6L power supply system:

| Document | File # | Description |
|--------------|--------|----------------------------|
| UL/CSA 60950 | | US and Canada Requirements |
| EN60950 | | European Requirements |
| IEC60950 | | International Requirements |
| CE | | CE Marking |

Operating Temperature

The AVO250-48S28B power supply will start and operate within stated specifications at an ambient temperature from -40 °C to 85 °C under all load conditions. The storage temperature is -55 °C to 125 °C.

Thermal Considerations

The converter can both operate in two different modes.

Mode 1: The converter can operate in an enclosed environment without forced air convection. Cooling of the converter is achieved mainly by conduction from the baseplate to a heat sink. The converter can deliver full output power at 85 °C ambient temperature provided the baseplate temperature is kept the max values 100 °C. P1 in Figure 11 is the baseplate test point. Test data listed in Table 6.

Table 6. Thermal derating at different input voltage:

| Vin | Output Current (max) |
|-----|----------------------|
| 36V | 4.8A |
| 48V | 4.3A |
| 60V | 3.8A |
| 75V | 3.1A |

Mode 2: The converter is designed to operate in different thermal environments and sufficient cooling must be provided. Proper cooling of the DC/DC converter can be verified by measuring the temperature at the test point as shown in the Figure 11. The temperature at this point should not exceed the maximum values in the table 7.

Test point on baseplate

Test point on PCB

Figure 11 Temperature test points

Table 7. Temperature limit of the test points:

| Test point | Temperature limit |
|------------|-------------------|
| P1 | 113 °C |
| P2 | 118 °C |

The converter can operate with a smaller heatsink and sufficient airflow. Figure 13 shows the derating output current vs. ambient air temperature at different air velocity with a specified heatsink. Figure 14 shows the thermal image taken by a RF camera at a rated I/O condition.

Figure 12-1 Typical test condition, heatsink size (L*W*H): 57.9mm*22.86*12.7mm

Figure 12-2 Heatsink mechanical diagram

For a typical application, Figure 13 shows the derating of output current vs. ambient air temperature at different air velocity.

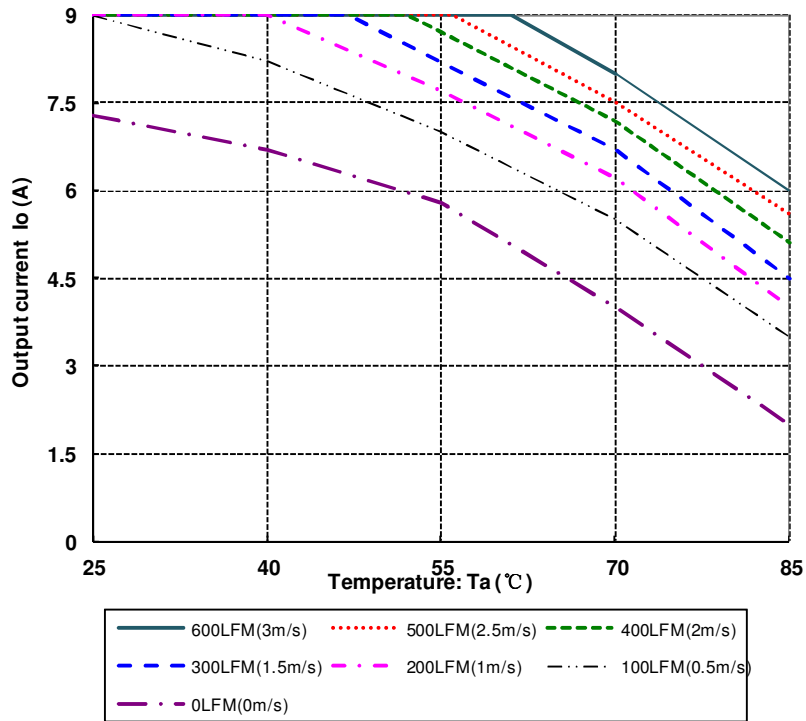

Figure 13 Output power derating, $48V_{in}$, air flowing across the converter from pin 3 to pin 1

Figure 14 Infrared thermal image, $48V_{in}$ @full load, 200LFM, $25^{\circ}C$

Qualification Testing

Table 8. Qualification Testing:

| Parameter | Unit (pcs) | Test condition |
|------------------|------------|--|
| Halt test | 4-5 | Ta,min-10 °C to Ta,max+10 °C , 5 °C step, Vin = min to max, 0 ~ 105% load |
| Vibration | 3 | Frequency range: 5Hz ~ 20Hz, 20Hz ~ 200Hz, A.S.D: 1.0m2/s3, -3db/oct, axes of vibration: X/Y/Z. Time: 30min/axes |
| Mechanical Shock | 3 | 30g, 6ms, 3axes, 6directions, 3time/direction |
| Thermal Shock | 3 | -40 °C to +100 °C , unit temperature 20 cycles |
| Thermal Cycling | 3 | -40 °C to 85 °C, temperature change rate: 1°C/min, cycles: 2cycles |
| Humidity | 3 | 40 °C, 95%RH, 48h |
| Solder Ability | 15 | IPC J-STD-002C-2007 |

Application Notes

Typical Application

Below is the typical application of the AVO250-48S28B power supply.

Figure 15 Typical application

C1 C7: SMD ceramic-100V-1000nF-X7R-1210.

C2: SMD ceramic-100V-100nF-±10%-X7R-1206.

C3: 220µF/100V electrolytic capacitor; P/N: UPM1A221MED or equivalent caps.

C6: 680µF/50V electrolytic capacitor; P/N: UPM1A221MED+ UPM1A471MHD or equivalent caps.

C4 C5: SMD ceramic-0.1U/1000V/X7R- 2220.

L1: 809uH-±25%-9.7A-R5K-28*26*12.7mm.

Fuse: External fast blow fuse with a rating of 15A. The recommended fuse model is 0314015.P from LITTLEFUSE.

Remote ON/OFF

Either positive or negative remote ON/OFF logic is available in AVO250-48S28B. The logic is CMOS and TTL compatible. The voltage between pin Remote ON/OFF and pin Vin- must not exceed the range listed in table 1 to ensure proper operation. The external Remote ON/OFF circuit is highly recommended as shown in figure 16.

Isolated remote ON/OFF circuit

Non-isolated remote ON/OFF circuit

Figure 16 External Remote ON/OFF circuit

Trim Characteristics

Connecting an external resistor between Trim pin and Vo- pin will decrease the output voltage. While connecting it between Trim and Vo+ will increase the output voltage. The following equations determine the external resistance to obtain the trimmed output voltage.

$$R_{adj_down} = \left(\frac{100\%}{\Delta\%} - 2 \right) k\Omega$$

$$R_{adj_up} = \left(\frac{V_o(100\% + \Delta\%)}{1.225 \times \Delta\%} - \frac{100\% + 2 \times \Delta\%}{\Delta\%} \right) k\Omega$$

Δ : Output error rate against nominal output voltage.

$$\Delta = \left| \frac{100 \times (V_{nom} - V_o)}{V_{nom}} \right|$$

V_{nom} : Nominal output voltage.

For example, to get 32.5V output, the trimming resistor is

$$\Delta = \frac{100 \times (V_{nom} - V_o)}{V_{nom}} = \frac{100 \times (32.5 - 28)}{28} = 16.07$$

$$R_{adj_up} = \frac{32.5(100 + 16.07)}{1.225 \times 16.07} - \frac{100\% + 2 \times 16.07\%}{16.07\%} = 189.6(K\Omega)$$

For 1% adjustment resistor, the trimmed output voltage is guaranteed within $\pm 2\%$.

When trimming up, the output current should be decreased accordingly so as not to exceed the maximum output power.

Figure 17 Trim up

Figure 18 Trim down

For AVO250-48S28B, if the sense compensate function is not necessary, connect S+ to Vo+ and S- to Vo- directly.

Input Ripple & Output Ripple & Noise Test Configuration

Figure 19 Input ripple & inrush current, output ripple & noise test configuration

Vdc: DC power supply

L1: 12uH

Cin: 220μF/100V typical

C1: 220μF/100V electrolytic capacitor, High frequency and low ESR

C2 C3: SMDceramic-100V-1000nF-X7R-1210

C4: 1000μF/50V electrolytic capacitor, High frequency and low ESR

Note: It is recommended to use a coaxial cable with series 50Ω resistor and 0.68μF ceramic capacitor or a ground ring of probe to test output ripple & noise.

Soldering

The product AVO250-48S28B and AVO250-48S28PB-6L are intended for standard manual, reflow or wave soldering.

When reflow soldering is used, the temperature on pins is specified to maximum 260 °C for maximum 10s.

When wave soldering is used, the temperature on pins is specified to maximum 260 °C for maximum 7s.

When manual soldering is used, the iron temperature should be maintained at 300 °C ~ 380 °C and applied to the converter pins for less than 10s. Longer exposure can cause internal damage to the converter.

Cleaning of solder joint can be performed with cleaning solvent IPA or simulative.

Hazardous Substances Announcement (RoHS of China)

| Parts | Hazardous Substances | | | | | |
|-------------------|----------------------|----|----|------------------|-----|------|
| | Pb | Hg | Cd | Cr ⁶⁺ | PBB | PBDE |
| AVO250-48S28B-6 | x | x | x | x | x | x |
| AVO250-48S28PB-6L | x | x | x | x | x | x |

x: Means the content of the hazardous substances in all the average quality materials of the part is within the limits specified in SJ/T-11363-2006

√: Means the content of the hazardous substances in at least one of the average quality materials of the part is outside the limits specified in SJ/T11363-2006

Artesyn Embedded Technologies has been committed to the design and manufacturing of environment-friendly products. It will reduce and eventually eliminate the hazardous substances in the products through unremitting efforts in research. However, limited by the current technical level, the following parts still contain hazardous substances due to the lack of reliable substitute or mature solution:

1. Solders (including high-temperature solder in parts) contain plumbum.
2. Glass of electric parts contains plumbum.
3. Copper alloy of pins contains plumbum
