

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

**3-PIN MICROPROCESSOR RESET CIRCUITS****AZ809/AZ810****General Description**

The AZ809/810 microprocessor supervisory circuits can be used to monitor the power supplies in microprocessor and digital systems. They provide a reset to the microprocessor in power-up, power-down and brown-out conditions. The function of the AZ809/810 is to monitor the V_{CC} supply voltage, and assert a reset signal whenever this voltage declines below the factory-programmed reset threshold. The reset signal remains asserted for 240ms after V_{CC} rises above the threshold. The AZ809 has an active-low RESET output, while the AZ810 has an active-high RESET output. Seven standard reset voltage options are available, suitable for monitoring 3.0V, 3.3V and 5.0V supply voltages. With a typical supply current of only 8 μ A when V_{CC} is 3.3V, the AZ809/810 are ideal for use in portable equipment.

These ICs are available in SOT-23 package.

Features

- Precise Monitoring of 3.0V, 3.3V and 5.0V Supply Voltages
- Improved Maxim MAX809/MAX810 Replacement
- 140ms Min. Reset Pulse Width
- Active-low Reset Output (AZ809)
- Active-high Reset Output (AZ810)
- No External Components
- Specified Over Full Temperature Range: -40 to 105°C

Applications

- Embedded Controllers
- Battery Operated Systems
- Intelligent Instruments
- Wireless Communication Systems
- PDAs and Handheld Equipment

Pin Description

Pin Number		Pin Name	Function
AZ809	AZ810		
1	1	GND	Ground pin
2		$\overline{\text{RESET}}$	$\overline{\text{RESET}}$ is asserted LOW if V_{CC} falls below the reset threshold and remains LOW for the 240ms typical reset timeout period (140ms minimum) after V_{CC} exceeds the threshold
	2	RESET	RESET is asserted HIGH if V_{CC} falls below the reset threshold
3	3	V_{CC}	Power supply input voltage (3.0V, 3.3V, 5.0V)

BCD Semiconductor's Pb-free products, as designated with "E1" suffix in the part number, are RoHS compliant. Products with "G1" suffix are available in green packages.

Absolute Maximum Ratings (Note 1)

Parameter	Symbol	Value	Unit
Supply Voltage	V_{CC}	-0.3 to 6	V
$\overline{\text{RESET}}$, RESET		-0.3 to $V_{CC}+0.3$	V
Input Current, V_{CC} Pin		20	mA
Output Current, $\overline{\text{RESET}}$, RESET Pin		20	mA
Rate of Rise, V_{CC}		100	V/ μ s
Continuous Power Dissipation		320	mW
Junction Temperature	T_J	125	°C
Storage Temperature	T_{STG}	-65 to 150	°C
Lead Temperature (Soldering, 10sec)	T_{LEAD}	300	°C

Note 1: Stresses greater than those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "Recommended Operating Conditions" is not implied. Exposure to "Absolute Maximum Ratings" for extended periods may affect device reliability.

Recommended Operating Conditions

Parameter	Symbol	Min	Max	Unit
Operating Junction Temperature Range	T_J	-40	105	°C

Operating Diagram

Note: The reset signal is asserted LOW for the AZ809 and HIGH for the AZ810 when the V_{CC} signal falls below the threshold trip voltage and remains asserted for 240ms typical after the V_{CC} has risen above the threshold.
