

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

DSI to HDMI adapter board for STM32 Development Tools

Introduction

The DSI to HDMI adapter board (order code B-LCDAD-HDMI1) provides DSI input port and HDMI output port. It can be used on STM32 evaluation boards or discovery boards, to demonstrate video solutions based on STM32 MCUs.

Thanks to the bridge chip ADV7533, the DSI to HDMI adapter board can support 2-, 3- or 4-lanes DSI video input data, S/PDIF, 2-channels I²S audio input data and HDMI v1.3 output port.

The B-LCDAD-HDMI1 adapter board has the following features:

- Up to four lanes of MIPI/DSI data, each running up to 800 Mbps (video mode only: Non-Burst mode with synchronization pulse)
- 2-channels I²S transmit stereo up to 192 kHz sampling rate
- S/PDIF carries stereo LPCM audio or compressed audio
- HDMI output connector:
 - Support of video resolutions with pixel clocks up to 80 MHz
 - Support of CEC signals, 5 V-tolerant I²C and HPD I/Os
 - Common-mode filters with ESD protection

1 Hardware Layout and configuration

DSI to HDMI adapter board is designed around the ADV7533. *Figure 2* illustrates the connections on DSI to HDMI adapter board and *Figure 3* will help to locate these features on the actual evaluation board.

Figure 2. Hardware Block Diagram

2 Video and audio input connector

A male high speed connector CN1 on bottom side is used to implement DSI to HDMI adapter board on mother board. The 4-lane DSI video signals, audio (I²S or S/PDIF) signals, CEC signals and control signals (I²C bus, reset and interrupt signals) are on this connector.

Table 1 shows the pinout of CN1.

2.1 Video input (MIPI DSI) signals

4-lane MIPI DSI signals are connected on DSI to HDMI adapter board as video input interface. This board supports 2-, 3- or 4-lane DSI video input data and each running up to 800 Mbps.

DSI interface is compatible with DPHY V.0.90 and DSI V.1.02 and Supports inputs of 16-bit RGB 4:4:4, 24-bit RGB 4:4:4 and 30-bit RGB 4:4:4.

2.2 Audio input (S/PDIF & I²S) signals

S/PDIF or I²S audio input interface is implemented on CN1. DSI to HDMI adapter board supports standard S/PDIF for stereo LPCM or compressed audio up to 192 kHz, or 2-channel uncompressed LPCM I²S audio up to 192 kHz.

2.3 Control signals

I²C bus on CN1 serves as the serial port data I/O slave for register access. The default address is 0x7A.

Reset signal from mother board is connected to Power Down (PD) pin on ADV7533. It is internal pulled up by ADV7533.

Interrupt output signal is for mother board and it is pull up on DSI to HDMI adapter board.

3 HDMI output connector

A standard HDMI output connector CN2 is implemented on DSI to HDMI adapter board. The output supports all video and graphics resolutions from 480i to 1080p at 30 Hz. Thanks to common-mode filter with ESD protection parts, HDMI output connector is complies with IEC 61000-4-2 level 4 standard.

On CN2, I²C master for EDID reading and HDCP operations reports HDMI events through interrupts and registers. Hot Plug Detect Signal (HPD) Indicates to the interface whether the receiver is connected.

[Table 2](#) shows the pinout of CN2.

Table 2. HDMI output connector CN2

Pin number	Description	Pin number	Description
1	TMDS D2+	11	GND
2	GND	12	TMDS Clock-
3	TMDS D2-	13	CEC
4	TMDS D1+	14	NC
5	GND	15	DDC_I2C_SCL
6	TMDS D1-	16	DDC_I2C_SDA
7	TMDS D0+	17	GND
8	GND	18	HDMI_5V_Source from power switch U5
9	TMDS D0-	19	HPD
10	TMDS Clock+	-	-

4 CEC

There are two sources of CEC signal on HDMI output connector on DSI to HDMI adapter board. One source (Default setting) is from ADV7533 and its clock is from X1 on the board. The other source is from CN1 and mother board. Some PCB reworks should be done when using the second source shown in [Table 3](#).

Table 3. CEC source connection

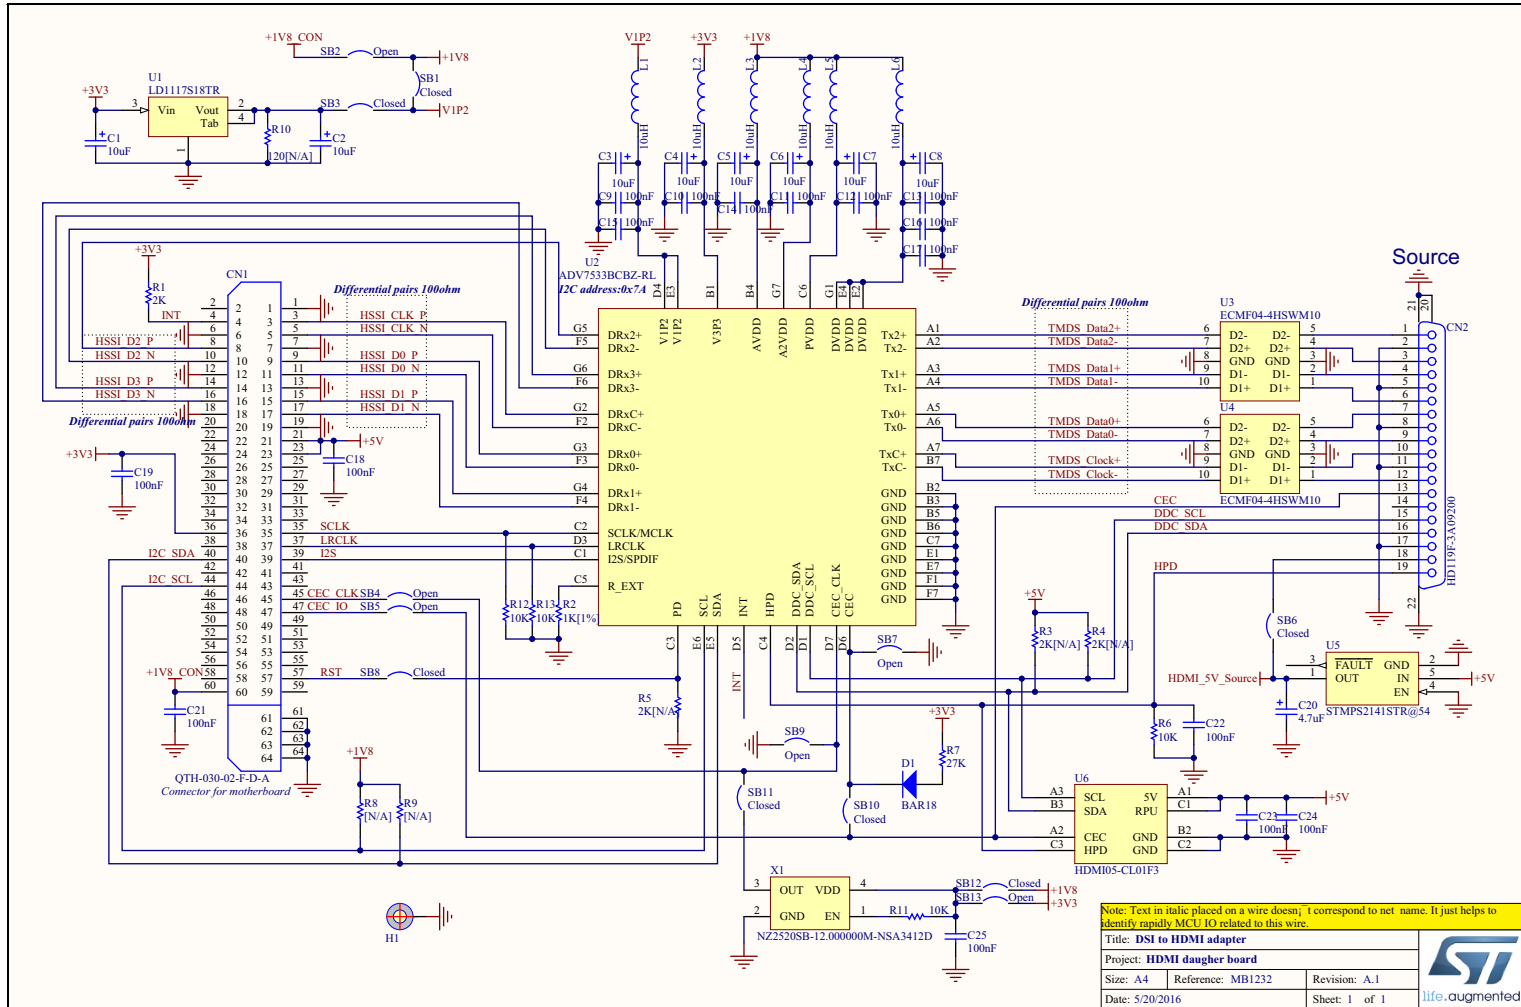

CEC source	Mount	Remove
ADV7533 (Default)	SB10	SB5
CN1 (Mother board)	SB5	SB10
