# imall

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from, Europe, America and south Asia, supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts, Customers Priority, Honest Operation, and Considerate Service", our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip, ALPS, ROHM, Xilinx, Pulse, ON, Everlight and Freescale. Main products comprise IC, Modules, Potentiometer, IC Socket, Relay, Connector. Our parts cover such applications as commercial, industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

# IoT Development Kit (IDK) Quick Start Guide

# Getting Started with the IoT Development Kit from ON Semiconductor

# Available Shields

- IDK Baseboard
- Ambient Light Sensor (ALS) Shield
- Touch Shield, PIR Shield, Stepper Motor Shield
- LED Ballast Shield, Wi-Fi<sup>®</sup> Module
- BLDC Shield, PoE Shield, CAN Shield

# Accessories

- Mini-USB Cable
- Cable Assembly

# **Tools Needed**

- IDE Installer
- PC: Windows<sup>®</sup> PC with minimum 1 USB port, JRE/JDK version 8u101 or later installed. OS: Windows 7, 8 or 10.

# Introduction

The IDK baseboard can be connected with different shields depending on the required IoT application. The IDK baseboard allows the user to create many types of IoT nodes and/or gateways depending on which shields are used with the baseboard. The IDK baseboard is configured by connecting the baseboard with the PC and USB cable and using accompanying PC software.

### Software Installation

Programing/configuring the IDK requires the ON Semiconductor IDE software. The IDE should be installed on the PC before connecting the hardware to the PC. The Software Suite can be downloaded from <u>www.onsemi.com</u>.

Steps for installation of the IDE are mentioned on page 5 of this Quick Start guide.

### Hardware Setup

After the IDE software is installed, hardware can be connected as shown in Figure 1. A single 12 V, 2 A power supply adapter powers the evaluation board (e.g. CUI INC, model SMI24–12....12 V/2 A or any other supporting  $V_{OUT} = 10-35$  V). Jumper settings required for the correct operation of the baseboard and the shields are listed in subsequent sections in this document. The shield boards plug directly into the IDK baseboard. The PC connects to the IDK baseboard through a USB cable.

The shields are classified into two broad categories – PMOD & Arduino – based on the interface where the shields are connected to the baseboard. In addition, Arduino-type shields include "Powered" and "Non-Input Power" shields.

# **APPLICATIONS INFORMATION**

Baseboard Rev2.0

# Powering Up the IDK

The IDK baseboard can be powered up in stand-alone USB Mode.

Powered shields require additional power supply for its operation. No-Input power shields (e.g. PMOD-type shields) draw power from the baseboard itself.

PMOD type shields: ALS, PIR & Touch (does not require additional power supply).

Arduino powered shields: Stepper Motor & LED Ballast shields are supplied from external power source.

### **IDK Powering Modes**

The IDK can be powered in 4 different ways:

- 1. USB: The IDK baseboard can be powered through USB Mode. Jumper setting: None.
  - **CAUTION:** In USB Mode, powered shields like Stepper motor, LED Ballast, etc. need to be connected to an external 12 V supply using the cable assembly provided with the IDK.
- 2. External 12 V DC power adapter supplied with the IDK: Wall power adapter can be connected to the DC jack J11. Jumper settings: J16:ON. J12: OFF & J15: OFF.
- 3. External 12 V DC through J11 Connector: 12 V can be provided from an external DC power supply through J11 Pin no.2 (+Ve) & J11 Pin No. 3 (-Ve). Jumper settings: J12: ON. J15: OFF & J16: OFF.
- 4. External 9–32 V DC through J11 Connector: 12 V can be provided from an external DC power supply through J11 Pin No.2 (+Ve) & J11 Pin No. 3 (–Ve). Jumper settings: J12: OFF, J15: ON & J16: OFF.

# Jumper Settings

The default jumper settings are highlighted below for the IDK boards.

- J32: Pins 2–3 to be shunted for Expander IO1\_6 th pin as Wi-Fi Mod Chip select
- J31: Pins 1–2 to be shunted for HR pulse from HRM shield to DIO16
- J31: Pins 2–3 to be shunted for DIO16 to Arduino connector.
- J35, J36: Pins 1–2 to be shunted for expander IO pins to Arduino connectors
- J35, J36: Pins 2–3 to be shunted for expander IO Pins to LEDs

# **IDK Installation**

Double click on the installer downloaded from ON Semiconductor.

For 32 bit machines, install IDK Installer x86.exe. For 64 bit machines, install IDK Installer x86 64.exe

Figure 17. IDK Installation (1/5)

Read the license, check the box and click Next.

Figure 18. IDK Installation (2/5)

Choose the destination directory to install the IDK. *It is* recommended to have IDK installed under C:\OnSemiconductor or D:\OnSemiconductor.

If a previous workspace is being retained, then make sure that metadata folder inside Workspace directory is deleted.
