Chipsmall

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts,Customers Priority,Honest Operation,and Considerate Service",our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

Sound Processors for BOOM BOX / Mini-component Stereo

Sound Processors
with Built-in 3-band Equalizers

BD3403FV, BD3861FS, BD3883FS   No.10086EAT01

● Description

The Sound Processor has a built-in 3 Band Equalizer and can be controlled with a 2-wire serial. It is suited for a sound quality design which incorporates various functions, ranging from source selectors, such as BOOM BOX, Mini-audio systems and Micro-audio systems to preamplifiers at the front stage of the power amp.

● Features

1) High S/N, achieved by implementing 2-stage configuration of Front Volume and Rear Volume.
2) Provides surround and rear volume with Soft-switch to reduce a shock sound during switching functions(BD3883FS).
3) Volume and tone implemented with the resistance ladder circuit
   (to achieve high performance with low noise and low distortion).
4) Uses the BiCMOS process that achieves low-consumption current, which contributes to an energy-saving design.
   Using the BiCMOS process, has the advantage in quality over the scaling down of the internal regulators and heat controls.
5) SSOP-A32 and SSOP-B40 are used for the packages. Input pins and output pins are organized and separately laid out so as to keep the signal flows in one direction which consequently, simplify pattern layout of the set board and decrease the board dimensions.

● Applications

BOOM BOX, mini-audio systems, and micro-audio systems.

● Product lineup

Parameter	BD3403FV	BD3861FS	BD3883FS
Operating Voltage Range	6.5 to 9.5V	6.5 to 9.5V	6.5 to 9.5V
Equalizer	3 band (BASS, MIDDLE, TREBLE)	3 band (BASS, MIDDLE, TREBLE)	3 band (BASS, MIDDLE, TREBLE)
Front Volume	0 to -30dB/2dB step	0 to -50dB/2dB step -50 to -70dB/4dB step, -∞dB	0 to -87dB/1dB step, -∞dB
Rear Volume	0 to -59dB/1dB step, -∞dB	0 to -59dB/1dB step, -∞dB	0, -10dB
Input Gain	0 to 26dB/2dB step	0 to 26dB/2dB step	0, 6, 12, 16, 20, 23, 26, 29dB
Microphone Input	○	○	–
Surround	○	–	○
Package	SSOP-B40	SSOP-A32	SSOP-A32

● Absolute maximum ratings (Ta=25℃)

Prameter	Symbol	Ratings		Unit
		BD3403FV	BD3861FS,BD3883FS	
Power Supply Voltage	Vcc	10	10	V
Power Dissipation	Pd	900[*1]	950[*2]	mW

● This IC is not designed to be radiation-resistant.

● Control signal specifications

1. Signal Timing Conditions
   ・Data is read on the rising edge of the clock.
   ・Latch is read on the falling edge of the clock.
   ・Latch signal must terminate with the LOW state.
   ・To avoid malfunctions, clock and data signals must terminate with the LOW state.

1byte=8bit

Fig.1
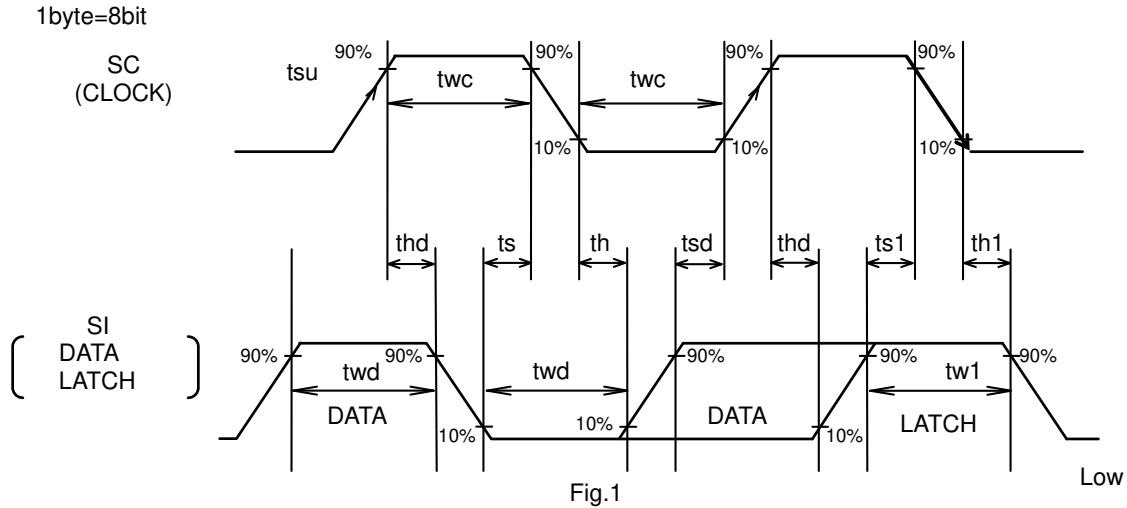

Parameter	Symbol	Limits			Unit
		Min.	Typ.	Max.	
Minimum Clock Width	twc	2.0	-	-	µs
Minimum Data Width	twd	2.0	-	-	µs
Minimum Latch Width	tw1	2.0	-	-	µs
Data Set-up Time (DATA→CLK)	Tsd	1.0	-	-	µs
Data Hold Time (CLK→DATA)	Thd	1.0	-	-	µs
Latch Set-up Time (CLK→LATCH)	ts1	1.0	-	-	µs
Latch Hold Time (DATA→LATCH)	th1	1.0	-	-	µs
Latch Low Set-up Time	ts	1.0	-	-	µs
Latch Low Hold Time	th	1.0	-	-	µs

2. Voltage Conditions for Control Signals (BD3403FV, BD3861FS)

Parameter	Condition	Limits			Unit

●Notes for use

1) Numbers and data in entries are representative design values and are not guaranteed values of the items.

2) Although ROHM is confident that the example application circuit reflects the best possible recommendations, be sure to verify circuit characteristics for your particular application. Modification of constants for other externally connected circuits may cause variations in both static and transient characteristics for external components as well as this Rohm IC. Allow for sufficient margins when determining circuit constants.

3) Absolute maximum ratings
Use of the IC in excess of absolute maximum ratings, such as the applied voltage or operating temperature range (Topr), may result in IC damage. Assumptions should not be made regarding the state of the IC (short mode or open mode) when such damage is suffered. A physical safety measure, such as a fuse, should be implemented when using the IC at times where the absolute maximum ratings may be exceeded.

4) GND potential
Ensure a minimum GND pin potential in all operating conditions. Make sure that no pins are at a voltage below the GND at any time, regardless of whether it is a transient signal or not.

5) Thermal design
Perform thermal design, in which there are adequate margins, by taking into account the permissible dissipation (Pd) in actual states of use.

6) Short circuit between terminals and erroneous mounting
Pay attention to the assembly direction of the ICs. Wrong mounting direction or shorts between terminals, GND, or other components on the circuits, can damage the IC.

7) Operation in strong electromagnetic field
Using the ICs in a strong electromagnetic field can cause operation malfunction.

8) 2-wire serial control
Because SC and SI terminals are designed for inputting high-frequency digital signals, wiring and layout patterns should be routed as not to cause interference with the analog-signal-related lines.

9) E Input external resistance (BD3883FS)
To avoid a sudden noise into E Input, external resistance (4.7kΩ) should be connected as close as possible to the IC terminal.

10) Function switching
Action to absorb shock sounds is taken when switching between the Volume, Treble, Middle and Bass functions.

11) Power-ON Reset (BD3883FS)
A built-in circuit for performing initialization inside the IC at Power-ON is provided. Specifically, the initial states are set as described in the table below. In the case of the setting design, however, to be on the safe side, it is recommended that data shall be sent to all the addresses as initial data at power-ON and, until this sending operation is completed, MUTE shall be applied. To avoid malfunctions, serial data signals must be set to the Low state at power-ON/OFF.

Function	Initial State
Input Selector	MUTE
Input Gain	0 dB
RECOUT	OFF
Volume	$-\infty$dB
Surround	OFF
Treble	0 dB
Middle	0 dB
Bass	0 dB
Rear Volume	0dB

12) Step switching noise (BD3883FS)
For Surround and Rear Volume, an external capacitor C is attached to the CAP pin to control the switching step noise. In the application circuit, a constant value, as an example, is shown by the CAP pin.
The time constant for charge/discharge of the capacitor C (varying between VBE to 5VBE (2.65V)) controls the slow switching operation.
The switching time constant T is calculated as the follows:
$$T=2.55\times10^5\times C$$
VBE has temperature characteristics and may affect the value of the time constant T.

13) Input Selector and Input Gain
    When changing Input Selector or Input Gain, the Soft-switching is not applied. Therefore, it is recommended to implement the MUTE function.

    ⊙MUTE setting example

                                                              L=ON
                                                              H=OFF

    MUTE

                                         SERIAL DATA
    SERIAL DATA

         40～60ms

    INPUT SOURCE
    SWITCHING
                              Fig.17

14) Constraints of serial control (BD3883FS)
    On Soft-switching of the RECOUT, Surround, and Rear Volume functions, data must not be sent serially to the functions before the switching operation is completed.

              If the function for Soft-switch should serially send the data (Data(4)) on the same Select Address, the time interval between the send operations must be set to 500 -600msec.

    Direction

         Data(4)   Data(4)

                              T
   Fig.18

15) Function setting while muting Volume (BD3883FS)
    While muting Volume, to avoid increasing residual noise, set Bass, Middle and Treble to 0dB, Surround to OFF, and Rear Volume to -10dB.

No copying or reproduction of this document, in part or in whole, is permitted without the consent of ROHM Co.,Ltd.

The content specified herein is subject to change for improvement without notice.

The content specified herein is for the purpose of introducing ROHM's products (hereinafter "Products"). If you wish to use any such Product, please be sure to refer to the specifications, which can be obtained from ROHM upon request.

Examples of application circuits, circuit constants and any other information contained herein illustrate the standard usage and operations of the Products. The peripheral conditions must be taken into account when designing circuits for mass production.

Great care was taken in ensuring the accuracy of the information specified in this document. However, should you incur any damage arising from any inaccuracy or misprint of such information, ROHM shall bear no responsibility for such damage.

The technical information specified herein is intended only to show the typical functions of and examples of application circuits for the Products. ROHM does not grant you, explicitly or implicitly, any license to use or exercise intellectual property or other rights held by ROHM and other parties. ROHM shall bear no responsibility whatsoever for any dispute arising from the use of such technical information.

The Products specified in this document are intended to be used with general-use electronic equipment or devices (such as audio visual equipment, office-automation equipment, communication devices, electronic appliances and amusement devices).

The Products specified in this document are not designed to be radiation tolerant.

While ROHM always makes efforts to enhance the quality and reliability of its Products, a Product may fail or malfunction for a variety of reasons.

Please be sure to implement in your equipment using the Products safety measures to guard against the possibility of physical injury, fire or any other damage caused in the event of the failure of any Product, such as derating, redundancy, fire control and fail-safe designs. ROHM shall bear no responsibility whatsoever for your use of any Product outside of the prescribed scope or not in accordance with the instruction manual.

The Products are not designed or manufactured to be used with any equipment, device or system which requires an extremely high level of reliability the failure or malfunction of which may result in a direct threat to human life or create a risk of human injury (such as a medical instrument, transportation equipment, aerospace machinery, nuclear-reactor controller, fuel-controller or other safety device). ROHM shall bear no responsibility in any way for use of any of the Products for the above special purposes. If a Product is intended to be used for any such special purpose, please contact a ROHM sales representative before purchasing.

If you intend to export or ship overseas any Product or technology specified herein that may be controlled under the Foreign Exchange and the Foreign Trade Law, you will be required to obtain a license or permit under the Law.

Thank you for your accessing to ROHM product informations.
