

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from, Europe, America and south Asia, supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts, Customers Priority, Honest Operation, and Considerate Service", our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip, ALPS, ROHM, Xilinx, Pulse, ON, Everlight and Freescale. Main products comprise IC, Modules, Potentiometer, IC Socket, Relay, Connector. Our parts cover such applications as commercial, industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

#### **NPN Silicon Germanium RF Transistor**

- Highly linear low noise RF transistor
- Provides outstanding performance for a wide range of wireless applications
- Based on Infineon's reliable high volume
  SiGe:C technology
- Ideal for CDMA and WLAN applications
- Collector design provides high linearity of 14.5 dBm OP1dB for low voltage application
- Maximum stable gain

 $G_{\rm ms}$  = 21.5 dB at 1.8 GHz

 $G_{\text{ma}}$  = 11 dB at 6 GHz

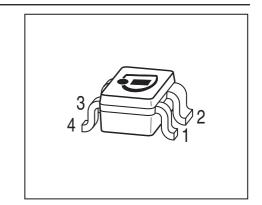

- Outstanding noise figure NF<sub>min</sub> = 0.7 dB at 1.8 GHz
  Outstanding noise figure NF<sub>min</sub> = 1.3 dB at 6 GHz
- Accurate SPICE GP model enables effective design in process
- Pb-free (RoHS compliant) package
- Qualified according AEC Q101

ESD (Electrostatic discharge) sensitive device, observe handling precaution!

#### **SPICE GP (Gummel-Poon)**

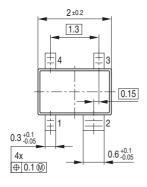

For the SPICE Gummel Poon (GP) model as well as for the S-parameters (including noise parameters) please refer to our internet website www.infineon.com/rf.models.

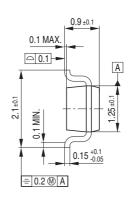

Please consult our website and download the latest versions before actually starting your design. You find the BFP620 SPICE GP model in the internet in MWO- and ADS-format, which you can import into these circuit simulation tools very quickly and conveniently. The model already contains the package parasitics and is ready to use for DC and high frequency simulations. The terminals of the model circuit correspond to the pin configuration of the device. The model parameters have been extracted and verified up to 10 GHz using typical devices. The BFP620 SPICE GP model reflects the typical DC- and RF-performance within the limitations which are given by the SPICE GP model itself. Besides the DC characteristics all S-parameters in magnitude and phase, as well as noise figure (including optimum source impedance, equivalent noise resistance and flicker noise) and intermodulation have been extracted.
