2 Product Brief

The BFP720ESD is a Silicon Germanium Carbon (SiGe:C) NPN Heterojunction wideband Bipolar RF Transistor (HBT) in a plastic dual emitter standard package with visible leads. The device is fitted with internal protection circuits, which enhance robustness against ESD and high RF input power strongly. The device combines robustness with very high RF gain and lowest noise figure at low operation current for use in a wide range of wireless applications.

The BFP720ESD is especially well-suited for portable battery-powered applications in which reduced power consumption is a key requirement. Device design supports collector voltages up to 4.2 V.

Note:

1. $G_{ms} = IS_{21} / S_{12}I$ for $k < 1$; $G_{ma} = IS_{21} / S_{12}I(k - (k^2 - 1)^{1/2})$ for $k > 1$
2. In order to get the NF_{min} values stated in this chapter the test fixture losses have been subtracted from all measured results.
3. OIP_3 value depends on termination of all intermodulation frequency components. Termination used for this measurement is 50Ω from 0.2 MHz to 12 GHz.
