

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

BGA5M1BN6

18dB High Gain Low Noise Amplifier for LTE Midband

Features

- Operating frequencies: 1805 - 2200 MHz
- Insertion power gain: 19.3 dB
- Insertion Loss in bypass mode: 4.7 dB
- Low noise figure: 0.65 dB
- Low current consumption: 9.5 mA
- Multi-state control: Bypass- and high gain-Mode
- Ultra small TSNP-6-10 leadless package
- RF output internally matched to 50 Ohm
- Low external component count

Application

The LTE data rate can be significantly improved by using the Low Noise Amplifier. The integrated bypass function increases the overall system dynamic range and leads to more flexibility in the RF front-end.

In high gain mode the LNA offers best Noise Figure to ensure high data rates even on the LTE cell edge. Closer to the basestation the bypass mode can be activated reducing current consumption.

Product Validation

Qualified for industrial applications according to the relevant tests of JEDEC47/20/22

Features

Description

The BGA5M1BN6 is a front-end low noise amplifier for LTE which covers a wide frequency range from 1805 MHz to 2200 MHz. The LNA provides 19.3 dB gain and 0.65 dB noise figure at a current consumption of 9.5 mA in the application configuration described in [Chapter 4](#). In bypass mode the LNA provides an insertion loss of 4.7 dB. The BGA5M1BN6 is based upon Infineon Technologies' B9HF Silicon Germanium technology. It operates from 1.5 V to 3.6 V supply voltage. The device features a single-line two-state control (Bypass- and High gain-Mode). OFF-state can be enabled by powering down VCC.

Attention: *Stresses above the max. values listed here may cause permanent damage to the device. Maximum ratings are absolute ratings; exceeding only one of these values may cause irreversible damage to the integrated circuit. Exposure to conditions at or below absolute maximum rating but above the specified maximum operation conditions may affect device reliability and life time. Functionality of the device might not be given under these conditions.*
