

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

Silicon Germanium GPS Low Noise Amplifier

Features

- High gain: 18 dB
- Low Noise Figure: 0.9 dB
- Power off function
- Operating frequency 1575 MHz
- Supply voltage: 2.4 V to 3.2 V
- Tiny PG-TSLP-7-1 leadless package
- B7HF Silicon Germanium technology
- RF output internally matched to 50 Ω
- Low external component count
- 1 kV HBM ESD protection (including AI-pin)
- Moisture sensitivity level: MSL 1

TSLP-7-1

Application

- 1575 MHz GPS

Description

The BGA615L7 is a front-end low noise amplifier for Global Positioning System (GPS) applications. The LNA provides 18 dB gain, 0.9 dB noise figure and high linearity performance, allowing it to be used as a first-stage LNA. Current consumption is as low as 5.6 mA. The BGA615L7 is based upon Infineon Technologies' B7HF Silicon Germanium technology. It operates over a 2.4 V to 3.2 V supply range.

Figure 5 Detailed View of Application Board

Please note that RF-ground is connected via pin 3 only. In order to achieve the same performance as given in this data sheet, it is necessary to provide good RF-grounding on this pin. Furthermore, the LF trap consisting of inductor L1 and capacitor C1 should be placed as close as possible to pin 3.
