## : ©hipsmall

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts,Customers Priority,Honest Operation, and Considerate Service",our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

## TrilithIC

BTS 7750 GP

## Data Sheet

## 1 Overview

### 1.1 Features

- Quad D-MOS switch driver
- Free configurable as bridge or quad-switch
- Optimized for DC motor management applications
- Low $R_{\mathrm{DS}}$ on $: 70 \mathrm{~m} \Omega$ high-side switch, $45 \mathrm{~m} \Omega$ lowside switch (typical values @ $25^{\circ} \mathrm{C}$ )
- Maximum peak current: typ. $12 \mathrm{~A} @ 25^{\circ} \mathrm{C}$
- Very low quiescent current: typ. $5 \mu \mathrm{~A} @ 25^{\circ} \mathrm{C}$
- Small outline, thermal optimized PowerPak
- Full short-circuit-protection
- Operates up to 40 V
- Status flag diagnosis
- Overtemperature shut down with hysteresis
- Internal clamp diodes
- Isolated sources for external current sensing
- Under-voltage detection with hysteresis
- PWM frequencies up to 1 kHz

| Type | Ordering Code | Package |
| :--- | :--- | :--- |
| BTS 7750 GP | Q67006-A9402 | P-TO263-15-1 |

### 1.2 Description

The BTS 7750 GP is part of the TrilithIC family containing three dies in one package: One double high-side switch and two low-side switches. The drains of these three vertical DMOS chips are mounted on separated leadframes. The sources are connected to individual pins, so the BTS 7750 GP can be used in H-bridge- as well as in any other configuration. Both the double high-side and the two low-side switches of the BTS 7750 GP are manufactured in SMART SIPMOS ${ }^{\circledR}$ technology which combines low $R_{\mathrm{DS} \text { on }}$ vertical DMOS power stages with CMOS control circuitry. The high-side switch is fully protected and contains the control and diagnosis circuitry. Also the low-side switches are fully protected, the equivalent standard product is the BTS 134 D .
In contrast to the BTS 7750 G , which consists of the same chips in an P-DSO-28 package, the P-TO263-15-1 PowerPack offers a much lower thermal resistance, which opens up applications with even higher currents in the automotive and industrial area.

BTS 7750 GP

### 1.3 Pin Configuration

Figure 1

### 1.4 Pin Definitions and Functions

| Pin No. | Symbol | Function |
| :--- | :--- | :--- |
| 1 | IL1 | Analog input of low-side switch 1 |
| 2 | NC | Not connected |
| $\mathbf{3}$ | SL1 | Source of low-side switch 1 |
| 4 | NC | Not connected |
| $\mathbf{5}$ | SH1 | Source of high-side switch 1 |
| 6 | GND | Ground of high-side switches |
| 7 | IH1 | Digital input of high-side switch 1 |
| $\mathbf{8}$ | DHVS | Drain of high-side switches and power supply voltage |
| 9 | ST | Status; open Drain output |
| 10 | SH2 | Digital input of high-side switch 2 |
| $\mathbf{1 1}$ | SC | Source of high-side switch 2 |
| 12 | IL2 | Analon input of low-side switch 2 |
| 13 | SL2 | Not connected |
| 14 | DL2 | Source of low-side switch 2 <br> Heain of low-side switch 2 |
| $\mathbf{1 5}$ | DHVS | Drain of high-side switches and power supply voltage <br> Heat-Slug 2 or Heat-Dissipator |
| $\mathbf{1 6}$ | DL1 | Drain of low-side switch 1 <br> Heat-Slug 1 or Heat-Dissipator |
| $\mathbf{1 7}$ |  |  |

Pins written in bold type need power wiring.

### 1.5 Functional Block Diagram

Figure 2
Block Diagram

### 1.6 Circuit Description

## Input Circuit

The control inputs $\mathrm{IH} 1,2$ consist of TTL/CMOS compatible Schmitt-Triggers with hysteresis. Buffer amplifiers are driven by these stages and convert the logic signal into the necessary form for driving the power output stages. The inputs are protected by ESD clamp-diodes.
The inputs IL1 and IL2 are connected to the internal gate-driving units of the N -channel vertical power-MOS-FETs.

## Output Stages

The output stages consist of an low $R_{\text {DS on }}$ Power-MOS H-bridge. In H-bridge configuration, the D-MOS body diodes can be used for freewheeling when commutating inductive loads. If the high-side switches are used as single switches, positive and negative voltage spikes which occur when driving inductive loads are limited by integrated power clamp diodes.

## Short Circuit Protection

The outputs are protected against

- output short circuit to ground
- output short circuit to the supply voltage, and
- overload (load short circuit).

An internal OP-Amp controls the Drain-Source-Voltage by comparing the DS-VoltageDrop with an internal reference voltage. Above this trippoint the OP-Amp reduces the output current depending on the junction temperature and the drop voltage.
In the case of overloaded high-side switches the status output is set to low.
The fully protected low-side switches have no status output.

## Overtemperature Protection

The high-side and the low-side switches also incorporate an overtemperature protection circuit with hysteresis which switches off the output transistors. In the case of the highside switches, the status output is set to low.

## Undervoltage-Lockout (UVLO)

When $V_{S}$ reaches the switch-on voltage $V_{\text {UvoN }}$ the IC becomes active with a hysteresis. The High-Side output transistors are switched off if the supply voltage $V_{\mathrm{S}}$ drops below the switch off value $V_{\text {uvoff }}$.

## Status Flag

The status flag output is an open drain output with Zener-diode which requires a pull-up resistor, c.f. the application circuit on page 14. Various errors as listed in the table "Diagnosis" are detected by switching the open drain output ST to low. A open load detection is not available. Freewheeling condition does not cause an error.

## 2 Truthtable and Diagnosis (valid only for the High-Side-Switches)

| Flag | IH1 | IH2 | SH1 | SH2 | ST | Remarks |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Inputs |  | Outputs |  |  |  |
| Normal operation; identical with functional truth table | $\begin{aligned} & 0 \\ & 0 \\ & 1 \\ & 1 \end{aligned}$ | $\begin{aligned} & 0 \\ & 1 \\ & 0 \\ & 1 \end{aligned}$ | $\begin{aligned} & \mathrm{L} \\ & \mathrm{~L} \\ & \mathrm{H} \\ & \mathrm{H} \end{aligned}$ | $\begin{aligned} & \mathrm{L} \\ & \mathrm{H} \\ & \mathrm{~L} \\ & \mathrm{H} \end{aligned}$ | $\begin{array}{\|l} \hline 1 \\ 1 \\ 1 \\ 1 \end{array}$ | stand-by mode switch2 active switch1 active both switches active |
| Overtemperature high-side switch1 | $\begin{aligned} & 0 \\ & 1 \end{aligned}$ | $\begin{aligned} & \mathrm{X} \\ & \mathrm{X} \end{aligned}$ | $\begin{aligned} & \mathrm{L} \\ & \mathrm{~L} \end{aligned}$ | $\begin{aligned} & \mathrm{x} \\ & \mathrm{x} \end{aligned}$ | $\begin{aligned} & 1 \\ & 0 \end{aligned}$ | detected |
| Overtemperature high-side switch2 | $\begin{aligned} & \mathrm{X} \\ & \mathrm{X} \end{aligned}$ | $\begin{aligned} & 0 \\ & 1 \end{aligned}$ | $\begin{aligned} & \mathrm{X} \\ & \mathrm{X} \end{aligned}$ | $\begin{aligned} & \mathrm{L} \\ & \mathrm{~L} \end{aligned}$ | $\begin{aligned} & 1 \\ & 0 \end{aligned}$ | detected |
| Overtemperature both high-side switches | $\begin{gathered} 0 \\ x \\ 1 \end{gathered}$ | $\begin{array}{\|l\|} \hline 0 \\ 1 \\ x \\ \hline \end{array}$ | $\begin{aligned} & \mathrm{L} \\ & \mathrm{~L} \\ & \mathrm{~L} \end{aligned}$ | $\begin{aligned} & \hline \mathrm{L} \\ & \mathrm{~L} \\ & \mathrm{~L} \end{aligned}$ | $\begin{aligned} & 1 \\ & 0 \\ & 0 \end{aligned}$ | detected detected |
| Undervoltage | X | X | L | L | 1 | not detected |

Inputs:
0 = Logic LOW
1 = Logic HIGH
X = don't care

Outputs:
Z = Output in tristate condition
L = Output in sink condition
$\mathrm{H}=$ Output in source condition
X $=$ Voltage level undefined

Status:
1 = No error
0 = Error

## 3 Electrical Characteristics

### 3.1 Absolute Maximum Ratings

$-40^{\circ} \mathrm{C}<T_{\mathrm{j}}<150^{\circ} \mathrm{C}$

| Parameter | Symbol | Limit Values |  | Unit | Remarks |
| :--- | :--- | :--- | :--- | :--- | :--- |
|  |  | min. | max. |  |  |

High-Side-Switches (Pins DHVS, IH1,2 and SH1,2)

| Supply voltage | $V_{\mathrm{S}}$ | -0.3 | 42 | V | - |
| :--- | :--- | :--- | :--- | :--- | :--- |
| Supply voltage for full short <br> circuit protection | $V_{\mathrm{S}(\mathrm{SCP})}$ |  | 28 | V |  |
| HS-drain current | $I_{\mathrm{S}}$ | -10 | $*$ | A | $T_{\mathrm{C}}=125^{\circ} \mathrm{C} ; \mathrm{DC}$ |
| HS-input current | $I_{\mathrm{IH}}$ | -5 | 5 | mA | Pin IH 1 and IH 2 |
| HS-input voltage | $V_{\mathrm{IH}}$ | -10 | 16 | V | Pin IH 1 and IH 2 |

Note: * internally limited

## Status Output ST

| Status pull up voltage | $V_{\text {ST }}$ | -0.3 | 5.4 | V |  |
| :--- | :--- | :--- | :--- | :--- | :--- |
| Status Output current | $I_{\text {ST }}$ | -5 | 5 | mA | Pin ST |

## Low-Side-Switches (Pins DL1,2, IL1,2 and SL1,2)

| Drain-Source-Clamp voltage | $V_{\mathrm{DSL}}$ | 42 | - | V | $V_{\mathrm{IL}}=0 \mathrm{~V} ; I_{\mathrm{D}} \leq 1 \mathrm{~mA}$ |
| :--- | :--- | :--- | :--- | :--- | :--- |
| Supply voltage for short <br> circuit protection | $V_{\mathrm{DSL}(\mathrm{SCP})}$ |  | 36 | V | $V_{\mathrm{IL}}=5 \mathrm{~V}$ |
|  |  |  | 20 | V | $V_{\mathrm{IL}}=10 \mathrm{~V}$ |
| LS-drain current | $I_{\mathrm{DL}}$ | -12 | ${ }^{*}$ | A | $T_{\mathrm{C}}=125^{\circ} \mathrm{C} ; \mathrm{DC}$ |
| LS-input voltage | $V_{\mathrm{IL}}$ | -0.3 | 10 | V | - |

Note: * internally limited

## Temperatures

| Junction temperature | $T_{\mathrm{j}}$ | -40 | 150 | ${ }^{\circ} \mathrm{C}$ | - |
| :--- | :--- | :--- | :--- | :--- | :--- |
| Storage temperature | $T_{\text {stg }}$ | -55 | 150 | ${ }^{\circ} \mathrm{C}$ | - |

3.1 Absolute Maximum Ratings (cont'd)
$-40^{\circ} \mathrm{C}<T_{\mathrm{j}}<150^{\circ} \mathrm{C}$

| Parameter | Symbol | Limit Values |  | Unit | Remarks |
| :--- | :--- | :--- | :--- | :--- | :--- |
|  |  | min. | max. |  |  |

Thermal Resistances (one HS-LS-Path active)

| LS-junction case | $R_{\mathrm{thj} \mathrm{L}}$ | - | 1.7 | $\mathrm{~K} / \mathrm{W}$ |  |
| :--- | :--- | :--- | :--- | :--- | :--- |
| HS-junction case | $R_{\mathrm{thj} \mathrm{C}}$ | - | 1.7 | $\mathrm{~K} / \mathrm{W}$ |  |
| Junction ambient <br> $R_{\mathrm{thja}}=\mathrm{T}_{\mathrm{j}(\mathrm{HS})} /\left(\mathrm{P}_{(\mathrm{HS})}+\mathrm{P}_{(\mathrm{LS})}\right)$ | $R_{\mathrm{thja}}$ | - | 26 | $\mathrm{~K} / \mathrm{W}$ | device soldered to <br> reference PCB with <br> $6 \mathrm{~cm}^{2}$ cooling area |

ESD Protection (Human Body Model acc. MIL STD 883D, method 3015.7 and EOS/ ESD assn. standard S5.1-1993)

| Input LS-Switch | $V_{\text {ESD }}$ | - | 2 | kV |  |
| :--- | :--- | :--- | :--- | :--- | :--- |
| Input HS-Switch | $V_{\mathrm{ESD}}$ | - | 1 | kV |  |
| Status HS-Switch | $V_{\text {ESD }}$ | - | 2 | kV |  |
| Output LS and HS-Switch | $V_{\text {ESD }}$ | - | 8 | kV | all other pins connected <br> to Ground |

Note: Maximum ratings are absolute ratings; exceeding any one of these values may cause irreversible damage to the integrated circuit.

### 3.2 Operating Range

$$
-40^{\circ} \mathrm{C}<T_{\mathrm{j}}<150^{\circ} \mathrm{C}
$$

| Parameter | Symbol | Limit Values |  | Unit | Remarks |
| :--- | :--- | :--- | :--- | :--- | :--- |
|  |  | min. | max. |  |  |
| Supply voltage | $V_{\mathrm{S}}$ | $V_{\text {UVOFF }}$ | 42 | V | After $V_{\mathrm{S}}$ rising <br> above $V_{\text {UVON }}$ |
| Input voltages | $V_{\text {IH }}$ | -0.3 | 15 | V | - |
| Input voltages | $V_{\mathrm{IL}}$ | -0.3 | 10 | V | - |
| Output current | $I_{\mathrm{ST}}$ | 0 | 2 | mA | - |
| Junction temperature | $T_{\mathrm{j}}$ | -40 | 150 | ${ }^{\circ} \mathrm{C}$ | - |

Note: In the operating range the functions given in the circuit description are fulfilled.

### 3.3 Electrical Characteristics

$I_{\mathrm{SH} 1}=I_{\mathrm{SH} 2}=I_{\mathrm{SL} 1}=I_{\mathrm{SL} 2}=0 \mathrm{~A} ;-40^{\circ} \mathrm{C}<T_{\mathrm{j}}<150^{\circ} \mathrm{C} ; 8 \mathrm{~V}<V_{\mathrm{S}}<18 \mathrm{~V}$

## Application Circuit

BTS 7750 GP
technologies

## 4 Package Outlines

## P-TO263-15-1

(Plastic Transistor Single Outline Package)

1) Typical All metal surfaces tin plated, except area of cut.

## Sorts of Packing

Package outlines for tubes, trays etc. are contained in our Data Book "Package Information".

## Attention please!

The information herein is given to describe certain components and shall not be considered as warranted characteristics.
Terms of delivery and rights to technical change reserved.
We hereby disclaim any and all warranties, including but not limited to warranties of non-infringement, regarding circuits, descriptions and charts stated herein.
Infineon Technologies is an approved CECC manufacturer.

## Information

For further information on technology, delivery terms and conditions and prices please contact your nearest Infineon Technologies Office in Germany or our Infineon Technologies Representatives worldwide (see address list).

## Warnings

Due to technical requirements components may contain dangerous substances. For information on the types in question please contact your nearest Infineon Technologies Office.
Infineon Technologies Components may only be used in life-support devices or systems with the express written approval of Infineon Technologies, if a failure of such components can reasonably be expected to cause the failure of that life-support device or system, or to affect the safety or effectiveness of that device or system. Life support devices or systems are intended to be implanted in the human body, or to support and/or maintain and sustain and/or protect human life. If they fail, it is reasonable to assume that the health of the user or other persons may be endangered.
