

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

## Image Correction ICs

# Image Correction IC for Camera

**BU1571KN**

No.10060ECT01

**●Description**

BU1571KN is AIE : Adaptive Image Enhancer (image processing technology by ROHM's hardware).  
Provides unprecedented visibility under severe conditions, such as darkness or extreme backlighting.

**●Features**

- 1) UXGA size (1600×1200) for input of image data up to 7.5 fps, SXGA size (1280×1024) for input of image data up to 15 fps and VGA size (640×480) for input of image data up to 30 fps.
- 2) Input data format for YUV=4:2:2 8bit. Order of components may be adjusted by the register.
- 3) Operation modes are image enhance mode, through mode, and sleep mode.
- 4) Strength of image correction can be set to linear.
- 5) Register can be set up with a 2-line serial interface.

\*Extra document is prepared separately about each register setup. Please refer to the Development Scheme on page 6.

**●Application**

Security camera, Intercom with camera, Drive recorder, and Web camera etc.

**●Lineup matrix**

Parameter	Supply power source voltage	Camera Interface	Control Interface	Output Interface	Interrupt output	Package
BU1571KN	1.45-1.55(V <sub>DDCore</sub> ) 2.7-3.6(V <sub>DDIO</sub> )	Supported up to Max 2M pixels. (1600 × 1200)	I <sup>2</sup> C BUS	8bit YUV=4:2:2 Camera interface	-	VQFN36

**●Absolute maximum ratings (Ta=25°C)**

Parameter	Symbol	Ratings	Unit
Supply power source voltage 1	VDDIO	-0.3 ~ +4.2	V
Supply power source voltage 2	VDD	-0.3 ~ +2.1	V
Input voltage	VIN	-0.3 ~ VDDIO+0.3	V
Storage temperature range	Tstg	-40 ~ +125	°C
Power dissipation	PD	450	mW

\*In the case exceeding 25°C, 4.5mW should be reduced at the rating 1°C.

**●Recommended operating range**

Parameter	Symbol	Ratings	Unit
Supply power source voltage 1(IO)	VDDIO	2.70 ~ 3.60(Typ:3.3V)	V
Supply power source voltage 2(CORE)	VDD	1.45 ~ 1.55(Typ:1.50V)	V
Input voltage range	VIN-VDDIO	0 ~ VDDIO	V
Operating temperature range	Topr	-40 ~ +85	°C

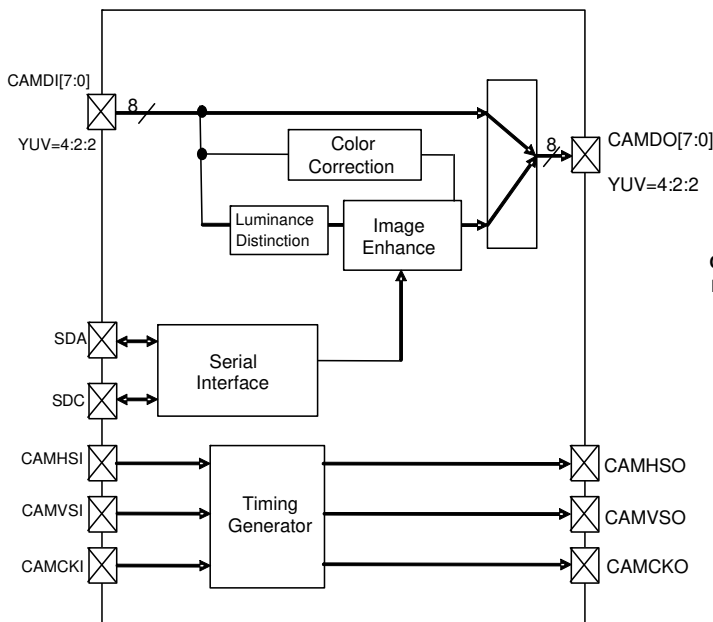

\*Please supply power source in order of VDD→VDDIO.

●Electric characteristics

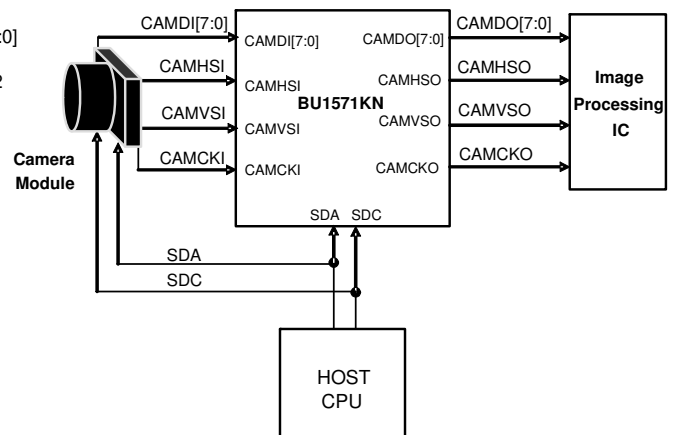

(Unless otherwise specified, VDD=1.50V, VDDIO=3.3V, GND=0.0V, Ta=25°C, f<sub>IN</sub>=52.0MHz)

Parameter	Symbol	Limits			Unit	Condition
		MIN.	TYP.	MAX.		
Input frequency	f <sub>IN</sub>	10.0	-	52.0	MHz	CAMCKI(DUTY45% ~ 55%)
Operating consumption current	IDD1	-	15	-	mA	At enhance mode setting
Static consumption current	IDDst	-	-	30	μA	At sleep mode setting, input terminal=GND setting
Input "H" current 1	I <sub>IH1</sub>	-10	-	10	μA	V <sub>IH</sub> =VDDIO
Input "H" current 2	I <sub>IH2</sub>	35	70	140	μA	Pull-Down terminal, V <sub>IH</sub> =VDDIO
Input "L" current 1	I <sub>IL1</sub>	-10	-	10	μA	V <sub>IL</sub> =GND
Input "L" current 2	I <sub>IL2</sub>	-10	-	10	μA	Pull-Down terminal, V <sub>IL</sub> =GND
Input "H" voltage 1	V <sub>IH1</sub>	VDDIO ×0.8	-	VDDIO +0.3	V	Normal input (including input mode of I/O terminal)
Input "L" voltage 1	V <sub>IL1</sub>	-0.3	-	VDDIO ×0.2	V	Normal input (including input mode of I/O terminal)
Input "H" voltage 2	V <sub>IH2</sub>	VDDIO ×0.85	-	VDDIO +0.3	V	Hysteresis input (RESETB, CAMCKI, SDA, SDC)
Input "L" voltage 2	V <sub>IL2</sub>	-0.3	-	VDDIO ×0.15	V	Hysteresis input (RESETB, CAMCKI, SDA, SDC)
Hysteresis voltage width	V <sub>hys</sub>	-	0.5	-	V	Hysteresis input (RESETB, CAMCKI, SDA, SDC)
Output "H" voltage	V <sub>OH</sub>	VDDIO -0.4	-	VDDIO	V	I <sub>OH</sub> =-1.0mA(DC) (including input mode of I/O terminal)
Output "L" voltage	V <sub>OL</sub>	0.0	-	0.4	V	I <sub>OL</sub> =1.0mA(DC) (including input mode of I/O terminal)

●Block Diagram

●Recommended Application Circuit

\*Extra document is prepared separately about system evaluation. Please refer to the Development Scheme on page 6.

## ● Terminal functions

PIN No.	PIN Name	In/Out	Active Level	Init	Function explanation	I/O type
1	CAMVSI	In	*	-	Vertical Timing Input (pull-down at sleep mode)	B*1
2	N.C.					
3	CAMHSI	In	*	-	Horizontal Timing Input (pull-down at sleep mode)	B*1
4	CAMDI0	In	DATA	-	Data Input Bit 0 (pull-down at sleep mode)	B*1
5	CAMDI1	In	DATA	-	Data Input Bit 1 (pull-down at sleep mode)	B*1
6	CAMDI2	In	DATA	-	Data Input Bit 2 (pull-down at sleep mode)	B*1
7	CAMDI3	In	DATA	-	Data Input Bit 3 (pull-down at sleep mode)	B*1
8	CAMDI4	In	DATA	-	Data Input Bit 4 (pull-down at sleep mode)	B*1
9	CAMDI5	In	DATA	-	Data Input Bit 5 (pull-down at sleep mode)	B*1
10	CAMDI6	In	DATA	-	Data Input Bit 6 (pull-down at sleep mode)	B*1
11	CAMDI7	In	DATA	-	Data Input Bit 7 (pull-down at sleep mode)	B*1
12	VDDIO	-	PWR	-	DIGITAL IO Power Source	-
13	CAMCKI	In	CLK	-	Clock Input (pull-down at sleep mode)	D*1
14	GND	-	GND	-	Common GROUND	-
15	VDD	-	PWR	-	CORE Power Source	-
16	SDA	In/Out	DATA	In	In/Output Serial Data	E
17	SDC	In/Out	CLK	In	In/Output Serial Clock	E
18	TESTOUT	Out	High	-	TEST Out Pin ( Keep Open )	-
19	CAMVSO	Out	-	-	Vertical Timing Signal Output	C
20	N.C.					
21	CAMHSO	Out	-	-	Horizontal Timing Signal Output	C
22	CAMDO0	Out	DATA	-	Data Output: Bit 0	C
23	CAMDO1	Out	DATA	-	Data Output: Bit 1	C
24	CAMDO2	Out	DATA	-	Data Output: Bit 2	C
25	CAMDO3	Out	DATA	-	Data Output: Bit 3	C
26	CAMDO4	Out	DATA	-	Data Output: Bit 4	C
27	CAMDO5	Out	DATA	-	Data Output: Bit 5	C
28	CAMDO6	Out	DATA	-	Data Output: Bit 6	C
29	CAMDO7	Out	DATA	-	Data Output: Bit 7	C
30	TEST1	In	Low	-	Test Mode Terminal 1 (Connect to GND)	B
31	TEST2	In	Low	-	Test Mode Terminal 2 (Connect to GND)	B
32	RESETB	In	Low	-	System Reset Signal	A
33	VDDIO	-	PWR	-	DIGITAL IO Power Source	-
34	CAMCKO	Out	CLK	-	Clock Output	C
35	GND	-	GND	-	Common GROUND	-
36	VDD	-	PWR	-	CORE Power Source	-

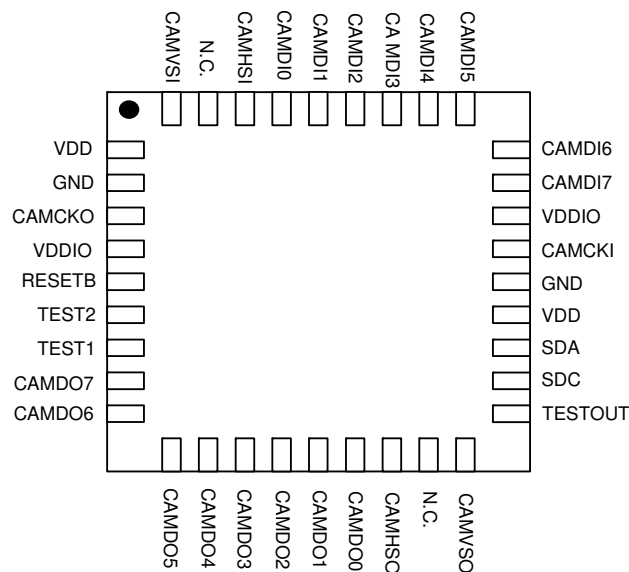

\*\*\*\* in the Active Level column indicates that it may be changed during set-up of the register. Init indicates pin status when released from reset.

\*1: Pull-down is ON during reset (initial status).

●Equivalent Circuit Structures of input / output pins

Type	The equivalent circuit structure	Type	The equivalent circuit structure
<b>A</b>	<p>Input terminal with Schmitt</p>	<b>B</b>	<p>Input terminal with PULL-DOWN</p>
<b>C</b>	<p>Output terminal</p>	<b>D</b>	<p>Hysteresis input terminal with PULL-DOWN</p>
<b>E</b>	<p>Hysteresis input / output terminal</p>		

●Terminal Layout (Bottom View)

●Timing Chart

- 1. Two-line serial interface
  - 1.1 Two-line serial interface timing

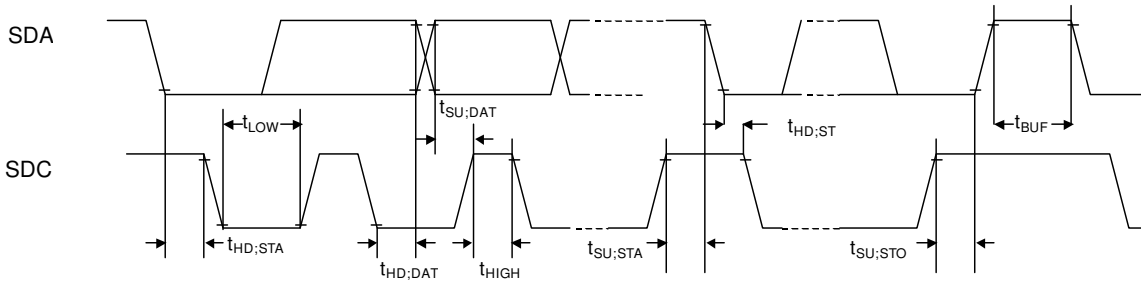

Table 1 I<sup>2</sup>C Interface timing

Symbol	Parameter	MIN.	TYP.	MAX.	Unit
$f_{SCL}$	SDC Clock Frequency	0	-	400	kHz
$t_{HD;STA}$	Hold-time(repetition) 『START』 conditions (The first clock pulse is generated after this period.)	0.6	-	-	$\mu$ s
$t_{LOW}$	The "L" period of SDC clock	1.3	-	-	$\mu$ s
$t_{HIGH}$	The "H" period of SDC clock	0.6	-	-	$\mu$ s
$t_{SU;STA}$	Setup time of repetitive 『START』 conditions	0.6	-	-	$\mu$ s
$t_{HD;DAT}$	Hold time of SDA	0	-	-	$\mu$ s
$t_{SU;DAT}$	Setup time of SDA	100	-	-	ns
$t_{SU;STO}$	Setup time of the 『STOP』 conditions	0.6	-	-	$\mu$ s
$t_{BUF}$	BUS free time between 『STOP』 conditions and the 『START』 conditions	1.3	-	-	$\mu$ s

- 2. Camera module interface
  - 2.1. Camera module interface timing

The input timing of camera image signal on camera I/F is shown in Table 2.

Table 2. BU1571KN timing (Camera data input)

Symbol	Explanation	MIN.	TYP.	MAX.	UNIT
$t_{CMS}$	CAMCKI Rise / Fall Camera set-up Time	4	-	-	ns
$t_{CMH}$	CAMCKI Rise / Fall Camera Hold Time	4	-	-	ns

The input timing of camera image signal on camera I/F is shown in Table 2.1-2.

Table 2. Camera data output timing

Symbol	Explanation	MIN.	TYP.	MAX.	UNIT
$t_{PCLK}$	Clock Cycle	19.2	-	-	ns
$d_{PCLK}$	Clock Duty	45	50	55	%
$t_{PDV}$	Decision of CAMDO from CAMCKO	-	-	5	ns
$t_{PHL}$ , $t_{PHH}$	Decision of CAMVSO or CAMHSO from CAMCKO	-	-	5	ns

**●Development Scheme**

This technical note is aimed at trying the connectivity in the hardware between customer's system and our AIE Adaptive Image Enhancer series.

We prepare various data and tools for every development STEP as follows other than this technical note, please contact the sales staff in your duty also including the support system.

**(1) Demonstration STEP**

**(You can try the standard image processing functions by the standard Demonstration kit at once.)**

You can confirm on TV screen what carried out AIE processing of a camera image and the DVD video image.

- Standard Demonstration board kit
  - ◎Demonstration board(TV-IN→BU1571KN→TV-OUT board)
  - ◎Demonstration board operation manual
  - ◎Demonstration software
- If the software for the trial board is installed in your Windows PC(Windows 2000/XP), more detailed setting is possible.
- ◎USB cable

**(2) Confirmation STEP**

**(We will respond to customer's camera module.)**

- Specifications
  - We will provide specifications for AIE Adaptive Image Enhancer according to customer's requirements.
- Function explanation
  - We will deliver you the function explanation describing detailed functions, register settings, external interfaces, timing, and so forth of AIE Adaptive Image Enhancer according to your requests.
- Application note
  - We will deliver you the detailed explanation data on application development of AIE Adaptive Image Enhancer according to your requests.

**(3) System check STEP**

**(You can check the application operation as a system by the kit of system check tools and your camera module.)**

You can check the interface with your camera module and the application operation on the system check board using the tools for user's only.

- System check tools kit
  - ◎Board for system evaluation
  - ◎Manual for system evaluation
  - ◎Macro command file for reference

\*You can check the detailed functions of the application operation by your PC using the macro command file.

**(4) Integrated check STEP with user's system**

**(You can check the application operation as a system on your system check board using the integrated check software.)**

You can check the application operation on the sample LSI-equipped system check board by your camera module using the integrated check software.

- On line Support ; We will answer your questions about the software development.

**●Notes for use****(1)Absolute Maximum Ratings**

An excess in the absolute maximum ratings, such as supply voltage, temperature range of operating conditions, etc., can break down devices, thus making impossible to identify breaking mode such as a short circuit or an open circuit. If any special mode exceeding the absolute maximum ratings is assumed, consideration should be given to take physical safety measures including the use of fuses, etc.

**(2)Operating conditions**

These conditions represent a range within which characteristics can be provided approximately as expected. The electrical characteristics are guaranteed under the conditions of each parameter.

**(3)Reverse connection of power supply connector**

The reverse connection of power supply connector can break down ICs. Take protective measures against the breakdown due to the reverse connection, such as mounting an external diode between the power supply and the IC's power supply terminal.

**(4)Power supply line**

Design PCB pattern to provide low impedance for the wiring between the power supply and the GND lines.

In this regard, for the digital block power supply and the analog block power supply, even though these power supplies has the same level of potential, separate the power supply pattern for the digital block from that for the analog block, thus suppressing the diffraction of digital noises to the analog block power supply resulting from impedance common to the wiring patterns. For the GND line, give consideration to design the patterns in a similar manner.

Furthermore, for all power supply terminals to ICs, mount a capacitor between the power supply and the GND terminal. At the same time, in order to use an electrolytic capacitor, thoroughly check to be sure the characteristics of the capacitor to be used present no problem including the occurrence of capacity dropout at a low temperature, thus determining the constant.

**(5)GND voltage**

Make setting of the potential of the GND terminal so that it will be maintained at the minimum in any operating state. Furthermore, check to be sure no terminals are at a potential lower than the GND voltage including an actual electric transient.

**(6)Short circuit between terminals and erroneous mounting**

In order to mount ICs on a set PCB, pay thorough attention to the direction and offset of the ICs. Erroneous mounting can break down the ICs. Furthermore, if a short circuit occurs due to foreign matters entering between terminals or between the terminal and the power supply or the GND terminal, the ICs can break down.

**(7)Operation in strong electromagnetic field**

Be noted that using ICs in the strong electromagnetic field can malfunction them.

**(8)Inspection with set PCB**

On the inspection with the set PCB, if a capacitor is connected to a low-impedance IC terminal, the IC can suffer stress. Therefore, be sure to discharge from the set PCB by each process. Furthermore, in order to mount or dismount the set PCB to/from the jig for the inspection process, be sure to turn OFF the power supply and then mount the set PCB to the jig. After the completion of the inspection, be sure to turn OFF the power supply and then dismount it from the jig. In addition, for protection against static electricity, establish a ground for the assembly process and pay thorough attention to the transportation and the storage of the set PCB.

**(9)Input terminals**

In terms of the construction of IC, parasitic elements are inevitably formed in relation to potential. The operation of the parasitic element can cause interference with circuit operation, thus resulting in a malfunction and then breakdown of the input terminal. Therefore, pay thorough attention not to handle the input terminals, such as to apply to the input terminals a voltage lower than the GND respectively, so that any parasitic element will operate. Furthermore, do not apply a voltage to the input terminals when no power supply voltage is applied to the IC. In addition, even if the power supply voltage is applied, apply to the input terminals a voltage lower than the power supply voltage or within the guaranteed value of electrical characteristics.

**(10)Ground wiring pattern**

If small-signal GND and large-current GND are provided, It will be recommended to separate the large-current GND pattern from the small-signal GND pattern and establish a single ground at the reference point of the set PCB so that resistance to the wiring pattern and voltage fluctuations due to a large current will cause no fluctuations in voltages of the small-signal GND. Pay attention not to cause fluctuations in the GND wiring pattern of external parts as well.

**(11)External capacitor**

In order to use a ceramic capacitor as the external capacitor, determine the constant with consideration given to a degradation in the nominal capacitance due to DC bias and changes in the capacitance due to temperature, etc.

# Notice

## Precaution on using ROHM Products

- Our Products are designed and manufactured for application in ordinary electronic equipments (such as AV equipment, OA equipment, telecommunication equipment, home electronic appliances, amusement equipment, etc.). If you intend to use our Products in devices requiring extremely high reliability (such as medical equipment <sup>(Note 1)</sup>, transport equipment, traffic equipment, aircraft/spacecraft, nuclear power controllers, fuel controllers, car equipment including car accessories, safety devices, etc.) and whose malfunction or failure may cause loss of human life, bodily injury or serious damage to property ("Specific Applications"), please consult with the ROHM sales representative in advance. Unless otherwise agreed in writing by ROHM in advance, ROHM shall not be in any way responsible or liable for any damages, expenses or losses incurred by you or third parties arising from the use of any ROHM's Products for Specific Applications.

(Note1) Medical Equipment Classification of the Specific Applications

JAPAN	USA	EU	CHINA
CLASS III	CLASS III	CLASS II b	CLASS III
CLASS IV		CLASS III	

- ROHM designs and manufactures its Products subject to strict quality control system. However, semiconductor products can fail or malfunction at a certain rate. Please be sure to implement, at your own responsibilities, adequate safety measures including but not limited to fail-safe design against the physical injury, damage to any property, which a failure or malfunction of our Products may cause. The following are examples of safety measures:
  - Installation of protection circuits or other protective devices to improve system safety
  - Installation of redundant circuits to reduce the impact of single or multiple circuit failure
- Our Products are designed and manufactured for use under standard conditions and not under any special or extraordinary environments or conditions, as exemplified below. Accordingly, ROHM shall not be in any way responsible or liable for any damages, expenses or losses arising from the use of any ROHM's Products under any special or extraordinary environments or conditions. If you intend to use our Products under any special or extraordinary environments or conditions (as exemplified below), your independent verification and confirmation of product performance, reliability, etc. prior to use, must be necessary:
  - Use of our Products in any types of liquid, including water, oils, chemicals, and organic solvents
  - Use of our Products outdoors or in places where the Products are exposed to direct sunlight or dust
  - Use of our Products in places where the Products are exposed to sea wind or corrosive gases, including Cl<sub>2</sub>, H<sub>2</sub>S, NH<sub>3</sub>, SO<sub>2</sub>, and NO<sub>2</sub>
  - Use of our Products in places where the Products are exposed to static electricity or electromagnetic waves
  - Use of our Products in proximity to heat-producing components, plastic cords, or other flammable items
  - Sealing or coating our Products with resin or other coating materials
  - Use of our Products without cleaning residue of flux (even if you use no-clean type fluxes, cleaning residue of flux is recommended); or Washing our Products by using water or water-soluble cleaning agents for cleaning residue after soldering
  - Use of the Products in places subject to dew condensation
- The Products are not subject to radiation-proof design.
- Please verify and confirm characteristics of the final or mounted products in using the Products.
- In particular, if a transient load (a large amount of load applied in a short period of time, such as pulse. is applied, confirmation of performance characteristics after on-board mounting is strongly recommended. Avoid applying power exceeding normal rated power; exceeding the power rating under steady-state loading condition may negatively affect product performance and reliability.
- De-rate Power Dissipation (Pd) depending on Ambient temperature (Ta). When used in sealed area, confirm the actual ambient temperature.
- Confirm that operation temperature is within the specified range described in the product specification.
- ROHM shall not be in any way responsible or liable for failure induced under deviant condition from what is defined in this document.

## Precaution for Mounting / Circuit board design

- When a highly active halogenous (chlorine, bromine, etc.) flux is used, the residue of flux may negatively affect product performance and reliability.
- In principle, the reflow soldering method must be used; if flow soldering method is preferred, please consult with the ROHM representative in advance.

For details, please refer to ROHM Mounting specification

**Precautions Regarding Application Examples and External Circuits**

1. If change is made to the constant of an external circuit, please allow a sufficient margin considering variations of the characteristics of the Products and external components, including transient characteristics, as well as static characteristics.
2. You agree that application notes, reference designs, and associated data and information contained in this document are presented only as guidance for Products use. Therefore, in case you use such information, you are solely responsible for it and you must exercise your own independent verification and judgment in the use of such information contained in this document. ROHM shall not be in any way responsible or liable for any damages, expenses or losses incurred by you or third parties arising from the use of such information.

**Precaution for Electrostatic**

This Product is electrostatic sensitive product, which may be damaged due to electrostatic discharge. Please take proper caution in your manufacturing process and storage so that voltage exceeding the Products maximum rating will not be applied to Products. Please take special care under dry condition (e.g. Grounding of human body / equipment / solder iron, isolation from charged objects, setting of ionizer, friction prevention and temperature / humidity control).

**Precaution for Storage / Transportation**

1. Product performance and soldered connections may deteriorate if the Products are stored in the places where:
  - [a] the Products are exposed to sea winds or corrosive gases, including Cl<sub>2</sub>, H<sub>2</sub>S, NH<sub>3</sub>, SO<sub>2</sub>, and NO<sub>2</sub>
  - [b] the temperature or humidity exceeds those recommended by ROHM
  - [c] the Products are exposed to direct sunshine or condensation
  - [d] the Products are exposed to high Electrostatic
2. Even under ROHM recommended storage condition, solderability of products out of recommended storage time period may be degraded. It is strongly recommended to confirm solderability before using Products of which storage time is exceeding the recommended storage time period.
3. Store / transport cartons in the correct direction, which is indicated on a carton with a symbol. Otherwise bent leads may occur due to excessive stress applied when dropping of a carton.
4. Use Products within the specified time after opening a humidity barrier bag. Baking is required before using Products of which storage time is exceeding the recommended storage time period.

**Precaution for Product Label**

QR code printed on ROHM Products label is for ROHM's internal use only.

**Precaution for Disposition**

When disposing Products please dispose them properly using an authorized industry waste company.

**Precaution for Foreign Exchange and Foreign Trade act**

Since our Products might fall under controlled goods prescribed by the applicable foreign exchange and foreign trade act, please consult with ROHM representative in case of export.

**Precaution Regarding Intellectual Property Rights**

1. All information and data including but not limited to application example contained in this document is for reference only. ROHM does not warrant that foregoing information or data will not infringe any intellectual property rights or any other rights of any third party regarding such information or data. ROHM shall not be in any way responsible or liable for infringement of any intellectual property rights or other damages arising from use of such information or data.:
2. No license, expressly or implied, is granted hereby under any intellectual property rights or other rights of ROHM or any third parties with respect to the information contained in this document.

**Other Precaution**

1. This document may not be reprinted or reproduced, in whole or in part, without prior written consent of ROHM.
2. The Products may not be disassembled, converted, modified, reproduced or otherwise changed without prior written consent of ROHM.
3. In no event shall you use in any way whatsoever the Products and the related technical information contained in the Products or this document for any military purposes, including but not limited to, the development of mass-destruction weapons.
4. The proper names of companies or products described in this document are trademarks or registered trademarks of ROHM, its affiliated companies or third parties.

### General Precaution

1. Before you use our Products, you are requested to carefully read this document and fully understand its contents. ROHM shall not be in any way responsible or liable for failure, malfunction or accident arising from the use of any ROHM's Products against warning, caution or note contained in this document.
2. All information contained in this document is current as of the issuing date and subject to change without any prior notice. Before purchasing or using ROHM's Products, please confirm the latest information with a ROHM sales representative.
3. The information contained in this document is provided on an "as is" basis and ROHM does not warrant that all information contained in this document is accurate and/or error-free. ROHM shall not be in any way responsible or liable for any damages, expenses or losses incurred by you or third parties resulting from inaccuracy or errors of or concerning such information.
