

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from Europe, America and south Asia, supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts, Customers Priority, Honest Operation, and Considerate Service", our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip, ALPS, ROHM, Xilinx, Pulse, ON, Everlight and Freescale. Main products comprise IC, Modules, Potentiometer, IC Socket, Relay, Connector. Our parts cover such applications as commercial, industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

# 8-bit shift register and latch driver

## BU2114 / BU2114F

The BU2114 and BU2114F are CMOS ICs with low power consumption, and are equipped with an 8-bit shift register latch. Data in the shift register can be latched asynchronously. The outputs (O1 to O8) are open drain outputs (because there is no protection diode, a maximum voltage above  $V_{DD}$ , of up to 7V, can be applied), and one output can drive 36 mA. A total output of up to 150 mA can be driven (when using static operation).

### ● Applications

These are designed for a wide range of applications in microcomputer peripheral circuits, such as in industrial equipment, office telephones, audio visual equipment, and expansion input and output boards.

### ● Features

- 1) The CMOS configuration enables low power consumption.
- 2) Open drain output.
- 3) Latch to 8-bit shift register provided, enabling drive of up to 150mA. ( $I_{SINK} = 36\text{mA}$ )
- 4) Cascade connections possible.

### ● Absolute maximum ratings (unless otherwise noted, $T_a = 25^\circ\text{C}$ )

Parameter	Symbol	Limits	Unit
Applied voltage	$V_{DD}$	$-0.3 \sim +7.0$	V
Input voltage	$V_{IN}$	$-0.3 \sim V_{DD}0.3$	V
Operating temperature	$T_{opr}$	$-25 \sim +75$	$^\circ\text{C}$
Storage temperature	$T_{stg}$	$-55 \sim +150$	$^\circ\text{C}$
Input protection diode current	$ID$	$\pm 20$	mA
Power dissipation	BU2114	1100*1	mW
	BU2114F	400*2	

\*1 Power dissipation is reduced by 8.8mW for each increase in  $T_a$  of  $1^\circ\text{C}$  over  $25^\circ\text{C}$ .

\*2 Power dissipation is reduced by 3.2mW for each increase in  $T_a$  of  $1^\circ\text{C}$  over  $25^\circ\text{C}$ .

### ● Recommended operating conditions (unless otherwise noted, $T_a = 25^\circ\text{C}$ )

Parameter	Symbol	Min.	Typ.	Max.	Unit	Conditions
Recommend voltage	$V_{DD}$	4.5	5.0	5.5	V	
Input voltage	$V_{IN}$	0	—	$V_{DD}$	V	SIN, CK, LATCH, EN, RST
Output voltage	$V_{OUT}$	0	—	$V_{DD}$	V	SOUT

○Not designed for radiation resistance.

Fig.1

## ● Pin descriptions

Pin No.	Symbol	I / O	Function
1	SIN	I	Serial data input pin
2	CK	I	Shift clock for shift register
3	LATCH	I	Setting this pin to "L" holds the latch output. While it is "H", latch output changes simultaneously when the shift register output changes.
4	SOUT	O	This is the output for the final-stage shift register.
5	EN	I	This is the Enable pin for O1 to O8. When this pin is "L", the latch output appears as is. When the output is "H", however, output QN is "L", and when the latch output is "L", Qn becomes High-Z
6	RST	I	Resets the shift register and latch.
7	GND	—	0V power supply
8	GND	—	0V power supply
9	GND	—	0V power supply
10	O8	O	Latch output for 8th stage of shift register
11	O7	O	Latch output for 7th stage of shift register
12	O6	O	Latch output for 6th stage of shift register
13	O5	O	Latch output for 5th stage of shift register
14	O4	O	Latch output for 4th stage of shift register
15	O3	O	Latch output for 3rd stage of shift register
16	O2	O	Latch output for 2nd stage of shift register
17	O1	O	Latch output for 1st stage of shift register
18	V <sub>DD</sub>	—	+ V <sub>DD</sub> power supply

Note 1) O1 to O8 are open drain output, and when the shift register output is "H", the output level goes "L".

- Electrical characteristics (unless otherwise noted,  $T_a = 25^\circ\text{C}$ ,  $V_{DD} = 5.0\text{V}$ )

Parameter	Symbol	Min.	Typ.	Max.	Unit	Conditions
Input low level voltage	$V_{IL}$	0	—	1.5	V	SIN, LATCH, EN
Input high level voltage	$V_{IH}$	3.5	—	5.0	V	SIN, LATCH, EN
Output low level current	$I_{SL}$	—	—	6	mA	$\text{SOUT } (VL = 0.4)$
Output high level current	$I_{SH}$	—	—	-6	mA	$\text{SOUT } (VL = V_{DD} - 0.4)$
Schmitt trigger "H" threshold value	$V_P$	2.31	—	3.28	V	CK, RST
Schmitt trigger "L" threshold value	$V_N$	1.5	—	2.58	V	CK, RST
Schmitt trigger hysteresis width	$V_H$	0.35	0.75	—	V	CK, RST
Output low level voltage	$V_{OL}$ $V_{OL}$	— —	— —	0.15 0.4	V V	$O_1 \sim O_8 I_D = 12\text{mA}$ $O_1 \sim O_8 I_D = 36\text{mA}$
Output leakage current	$I_L$	—	—	$\pm 10$	$\mu\text{A}$	—
Current dissipation	$I_{DD}$	—	1	100	$\mu\text{A}$	$V_{DD}$ or GND
Pull-up resistance	$R_{UP}$	35	50	68	$\text{k}\Omega$	—
Pull-down resistance	$R_{DN}$	35	50	68	$\text{k}\Omega$	—

- Timing characteristics (unless otherwise noted,  $T_a = 25^\circ\text{C}$ ,  $V_{DD} = 5.0\text{V}$ )

Parameter	Symbol	Conditions	Min.	Typ.	Max.	Unit
Clock frequency	f	Input duty 50%			5	MHz
Clock pulse width	t <sub>cw</sub>	—	100	—	—	ns
Latch pulse width	t <sub>rw</sub>	—	100	—	—	ns
Data setup time	t <sub>su</sub>	CK→SIN	100	—	—	ns
Data hold time	t <sub>h</sub>	CK→SIN	100	—	—	ns
Clock latch time	t <sub>dtl</sub>	—	100	—	—	ns

Fig.2 Timing conditions

- Switching characteristics (unless otherwise noted,  $T_a = 25^\circ\text{C}$ ,  $V_{DD} = 5.0\text{V}$ )

Parameter	Symbol	Conditions	Min.	Typ.	Max.	Unit
Output "L - H" propagation time Input CK to output SOUT	tsLH	$V_{IH} = 5\text{V}$ $V_{IL} = 0\text{V}$	—	—	100	ns
Output "H - L" propagation time Input CK to output SOUT	tsPLH		—	—	100	ns
Output "L - H" propagation time Input CK to output ON	tOLH		—	—	200	ns
Output "H - L" propagation time Input CK to output ON	tOHL		—	—	200	ns
Output "L - H" propagation time Input EN to output ON	tELH		—	—	100	ns
Output "H - L" propagation time Input EN to output ON	tEHL		—	—	100	ns

Note) Measured with pull-up resistance of  $1.0\text{k}\Omega$  and load of  $20\text{pF}$  applied to terminals O1 to O8.
