imall

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from, Europe, America and south Asia, supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts, Customers Priority, Honest Operation, and Considerate Service", our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip, ALPS, ROHM, Xilinx, Pulse, ON, Everlight and Freescale. Main products comprise IC, Modules, Potentiometer, IC Socket, Relay, Connector. Our parts cover such applications as commercial, industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

PLL frequency synthesizer for tuners **BU2624AF**

The BU2624AF is a PLL frequency synthesizer IC designed for use in car stereos, high-fidelity audio systems, and CD radio cassettes.

Featuring low current dissipation, low superfluous radiation, two frequency measurement counter systems, and two phase comparison outputs, this chip is ideal for high-performance multi-band systems.

Applications

Car stereos, high-fidelity audio systems, radio cassettes, receivers, and other frequency generating devices

Features

- 1) Built-in high-speed prescaler can divide 130MHzVCO.
- Low current dissipation (during operation: 6.0mA, PLL OFF: 300µA Typ.)
- Seven standard frequencies: 50kHz, 25kHz, 12.5kHz, 10kHz, 9kHz, 5kHz, and 1kHz.
- 4) Two counters for intermediate frequency detection

- 5) Unlock detection circuit
- 6) Five output ports (open drain)
- 7) SD input port
- 8) Two charge pump outputs
- 9) Serial data input (CE, CK, DA)
- 10) Control of phase comparison output

Block diagram

Pin descriptions

Pin No.	Symbol	Pin name	Function	1/0
1	XOUT	- Crystal oscillation	For generation of standard frequency and internal clock.	OUT
2	XIN	Crystal Oscillation	Connected to 7.2 MHz crystal resonator.	IN
3	CE	- Chip enable	When CE is H, DA (which is generated when CK starts)	
4	СК	Clock signal	goes to the internal shift register, and is latched according to the timing of CE shutdown. Also, output	IN
5	DA	Serial data	data is generated from the CD terminal when CK starts up.	
6	CD	Count data	Frequency data and unlock data are output.	
7	P0			
8	P1		On the line the basis of investigation	Nch open drain
9	P3	 Output port 	Controlled on the basis of input data.	
10	P4			
11	PD2	Phase comparison output	Operates in the same ways as PD1	3-state
12	SD	Input port	Output to the CD.	Schmidt input
13	IF2	IF2 input	Intermediate frequency input	
14	IF1	IF1 input	Selected on the basis of input data.	IN
15	P2	Output port	Controlled on the basis of input data.	Nch open drain
16	AMIN	AM input	Local input for AM	IN
17	FMIN	FM input	Local input for FM	IN
18	VDD	Power supply	Power supply, with 4.0V to 6.0V applied voltage.	
19	PD1	Phase comparison output	High level when value obtained by dividing local output is higher than standard frequency. Low level when	3-state
20	Vss	GROUND	value is lower. High impedance when value is same.	

•Electrical characteristics (unless otherwise noted, Ta = 25° C, V_{DD} = 5.0V)

\times	×	×	×	0	1	1	1	1	0	0	1 1	1	0	0

- (2) CT: Frequency measurement beginning data 1: Begins measurement.0: Resets internal counter, IF1 and IF2 go to pul down.
- (3) Output port control data: P0, P1, P2, P3, P4
- (4) PL PH: Control of charge pump output

PH = 0,	PL = 0	PLL operation
PH = 0,	PL = 1	PD1 PD2 LO level
PH = 1,	PL = 0	PD1 PD2 HI level
PH = 1,	PL = 1	PD1 PD2 LO level

(5)	R₀,	R₁,	R2,	standard	frequency data	
-----	-----	-----	-----	----------	----------------	--

	Data		
Ro	R1	R ₂	Standard frequency
0	0	0	25kHz
0	0	1	12.5kHz
0	1	0	50kHz
0	1	1	10kHz
1	0	0	5kHz
1	0	1	9kHz
1	1	0	1kHz
1	1	1	* PLL OFF

* FMIN = pulldown, AMIN = pulldown, PD = high impedance

(6) S: switch between FMIN and AMIN 0: FMIN 1: AMIN

(7) PS: If this bit is set to ON while AMIN is selected, swallow counter division is possible.

(8) IFS: Selection between IF1 and IF2 during IF count 0: IF1 1: IF2

(9) GT: Frequency measurement time and unlock detection ON/OFF

СТ	GT	Frequency measurement	Unlock detection	Data output
0	0	OFF	OFF	NG
0	1	OFF	ON	
1	0	ON Gate time = 8 ms	ON	ОК
1	1	ON Gate time = 16 ms	ON	

(10) TS: Test data (0) is input

Frequency counter

(1) Structure

(2) How the frequency counter operates

When control data CT equals 1, the 20-bit counter and the amp go into operation. When CT equals 0, amp input goes to pulldown and the counter is reset.

Measuring time (gate pulse) is selected (8 ms/16 ms) on the basis of control data GT.

When control data CT equals 0, the counter is reset.

(3) Explanation of output data

D0: LSB D19: MSB

Unlock detection

When control data GT equals 1, or CT equals 1, the unlock detection circuit goes into operation for 8ms.

When CT equals 1, the unlock detection circuits stops operating before the frequency counter gate pulse is emitted.

When CT equals 0, or GT equals 0, the unlock detection circuit is reset.

Explanation of the output data

U0	U1	U2	U3					
0	0	0	0			ERR	<	1.1μs
1	0	0	0	1.1μs	<	ERR	<	2.2μs
1	1	0	0	2.2 µ s	<	ERR	<	3.3μs
1	1	1	0	3.3 µs	<	ERR	<	4.4μs
1	1	1	1	4.4 μs	<	ERR		

Frequency counter and unlock detection

(1) When CT = 1: Frequency count and unlock detection are carried out.

(2) When CT = 0 and GT = 1: Only unlock detection is carried out.

Explanation of CD terminal

When frequency measurement or unlock detection is fin-

ished, the CD terminal goes to LO to indicate that the

count and unlock detection have finished.

It also synchronizes with CK to output counter data.

When the next data is input, it goes to HI.
