

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from Europe, America and south Asia, supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts, Customers Priority, Honest Operation, and Considerate Service", our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip, ALPS, ROHM, Xilinx, Pulse, ON, Everlight and Freescale. Main products comprise IC, Modules, Potentiometer, IC Socket, Relay, Connector. Our parts cover such applications as commercial, industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

Operational Amplifiers

Ground Sense Low Voltage Operation CMOS Operational Amplifiers

BU7461G BU7461SG BU7462xxx BU7462Sxxx BU7464F BU7464SF

General Description

BU7461G/BU7462xxx/BU7464F are input ground sense, output full swing CMOS operational amplifiers. BU7461SG/BU7462Sxxx/BU7464SF have an expanded operating temperature range. They have the features of low operating supply voltage, low supply current and low input bias current. These are suitable for portable equipment and sensor amplifiers.

Features

- Low Supply Current
- Low Operating Supply Voltage
- Wide Temperature Range
- Low Input Bias Current

Applications

- Sensor Amplifier
- Portable Equipment
- Consumer Equipment

Key Specifications

- Operating Supply Voltage: +1.7V to +5.5V
- Supply Current: 150 μ A/ch(Typ)
- Temperature Range:
 - BU7461G/BU7462xxx/BU7464F -40°C to +85°C
 - BU7461SG/BU7462Sxxx/BU7464SF -40°C to +105°C
- Input Offset Current: 1pA (Typ)
- Input Bias Current: 1pA (Typ)

Packages

| | W(Typ) x D(Typ) x H(Max) |
|--------------|--------------------------|
| SSOP5 | 2.90mm x 2.80mm x 1.25mm |
| SOP8 | 5.00mm x 6.20mm x 1.71mm |
| MSOP8 | 2.90mm x 4.00mm x 0.90mm |
| VSON008X2030 | 2.00mm x 3.00mm x 0.60mm |
| SOP14 | 8.70mm x 6.20mm x 1.71mm |

Absolute Maximum Ratings($T_A=25^\circ\text{C}$)

| Parameter | Symbol | Rating | | | Unit |
|--|------------|------------------------|---------------------------|---------------------------|---------------------------|
| | | BU7461G | BU7462xxx | BU7464F | |
| Supply Voltage | VDD-VSS | +7 | | | V |
| Power Dissipation | P_D | SSOP5 | 0.54 ^(Note1,6) | - | - |
| | | SOP8 | - | 0.55 ^(Note2,6) | - |
| | | MSOP8 | - | 0.47 ^(Note3,6) | - |
| | | VSON008X2030 | - | 0.41 ^(Note4,6) | - |
| | | SOP14 | - | - | 0.45 ^(Note5,6) |
| Differential Input Voltage ^(Note 7) | V_{ID} | VDD - VSS | | | V |
| Input Common-mode Voltage Range | V_{ICM} | (VSS-0.3) to (VDD+0.3) | | | V |
| Input Current ^(Note 8) | I_I | ± 10 | | | mA |
| Operating Supply Voltage | V_{opr} | +1.7V to +5.5V | | | V |
| Operating Temperature | T_{opr} | -40 to +85 | | | $^\circ\text{C}$ |
| Storage Temperature | T_{stg} | -55 to +125 | | | $^\circ\text{C}$ |
| Maximum Junction Temperature | T_{Jmax} | +125 | | | $^\circ\text{C}$ |

(Note 1) To use at temperature above $T_A=25^\circ\text{C}$ reduce 5.4mW/ $^\circ\text{C}$.(Note 2) To use at temperature above $T_A=25^\circ\text{C}$ reduce 5.5mW/ $^\circ\text{C}$.(Note 3) To use at temperature above $T_A=25^\circ\text{C}$ reduce 4.7mW/ $^\circ\text{C}$.(Note 4) To use at temperature above $T_A=25^\circ\text{C}$ reduce 4.1mW/ $^\circ\text{C}$.(Note 5) To use at temperature above $T_A=25^\circ\text{C}$ reduce 4.5mW/ $^\circ\text{C}$.

(Note 6) Mounted on a FR4 glass epoxy PCB 70mm×70mm×1.6mm (Copper foil area less than 3%).

(Note 7) The voltage difference between inverting input and non-inverting input is the differential input voltage.

Then input terminal voltage is set to more than VSS.

(Note 8) An excessive input current will flow when input voltages of more than VDD+0.6V or less than VSS-0.6V are applied.

The input current can be set to less than the rated current by adding a limiting resistor.

Caution: Operating the IC over the absolute maximum ratings may damage the IC. In addition, it is impossible to predict all destructive situations such as short-circuit modes, open circuit modes, etc. Therefore, it is important to consider circuit protection measures, like adding a fuse, in case the IC is operated in a special mode exceeding the absolute maximum ratings.

Description of Electrical Characteristics

Described here are the terms of electric characteristics used in this technical note. Items and symbols used are also shown. Note that item name and symbol and their meaning may differ from those on another manufacturer's document or general document.

1. Absolute maximum ratings

Absolute maximum rating item indicates the condition which must not be exceeded. Application of voltage in excess of absolute maximum rating or use out of absolute maximum rated temperature environment may cause deterioration of characteristics.

- (1) Supply Voltage (VDD/VSS)
Indicates the maximum voltage that can be applied between the VDD terminal and VSS terminal without deterioration or destruction of characteristics of internal circuit.
- (2) Differential Input Voltage (V_{ID})
Indicates the maximum voltage that can be applied between non-inverting terminal and inverting terminal without deterioration and destruction of characteristics of IC.
- (3) Input Common-mode Voltage Range (V_{ICM})
Indicates the maximum voltage that can be applied to the non-inverting and inverting terminals without deterioration or destruction of electrical characteristics. Input common-mode voltage range of the maximum ratings does not assure normal operation of IC. For normal operation, use the IC within the input common-mode voltage range characteristics.
- (4) Power Dissipation (P_D)
Indicates the power that can be consumed by the IC when mounted on a specific board at the ambient temperature 25°C (normal temperature). As for package product, P_D is determined by the temperature that can be permitted by the IC in the package (maximum junction temperature) and the thermal resistance of the package.

2. Electrical characteristics

- (1) Input Offset Voltage (V_{IO})
Indicates the voltage difference between non-inverting terminal and inverting terminals. It can be translated into the input voltage difference required for setting the output voltage at 0V.
- (2) Input Offset Current (I_{IO})
Indicates the difference of input bias current between the non-inverting and inverting terminals.
- (3) Input Bias Current (I_B)
Indicates the current that flows into or out of the input terminal. It is defined by the average of input bias currents at the non-inverting and inverting terminals.
- (4) Supply Current (I_{DD})
Indicates the current that flows within the IC under specified no-load conditions.
- (5) Maximum Output Voltage(High) / Maximum Output Voltage(Low) (V_{OH}/V_{OL})
Indicates the voltage range of the output under specified load condition. It is typically divided into maximum output voltage High and low. Maximum output voltage high indicates the upper limit of output voltage. Maximum output voltage low indicates the lower limit.
- (6) Large Signal Voltage Gain (A_V)
Indicates the amplifying rate (gain) of output voltage against the voltage difference between non-inverting terminal and inverting terminal. It is normally the amplifying rate (gain) with reference to DC voltage.
 $A_V = (\text{Output voltage}) / (\text{Differential Input voltage})$
- (7) Input Common-mode Voltage Range (V_{ICM})
Indicates the input voltage range where IC operates normally.
- (8) Common-mode Rejection Ratio (CMRR)
Indicates the ratio of fluctuation of input offset voltage when the input common mode voltage is changed. It is normally the fluctuation of DC.
 $\text{CMRR} = (\text{Change of Input common-mode voltage}) / (\text{Input offset fluctuation})$
- (9) Power Supply Rejection Ratio (PSRR)
Indicates the ratio of fluctuation of input offset voltage when supply voltage is changed.
It is normally the fluctuation of DC.
 $\text{PSRR} = (\text{Change of power supply voltage}) / (\text{Input offset fluctuation})$
- (10) Output Source Current/ Output Sink Current (I_{SOURCE} / I_{SINK})
The maximum current that can be output from the IC under specific output conditions. The output source current indicates the current flowing out from the IC, and the output sink current indicates the current flowing into the IC.
- (11) Slew Rate (SR)
Indicates the ratio of the change in output voltage with time when a step input signal is applied.
- (12) Gain Bandwidth (GBW)
Indicates a frequency where the voltage gain of operational amplifier is 1.
- (13) Phase Margin (θ)
Indicates the margin of phase from 180 degree phase lag at unity gain frequency.
- (14) Total Harmonic Distortion + Noise (THD+N)
Indicates the fluctuation of input offset voltage or that of output voltage with reference to the change of output voltage of driven channel.
- (15) Channel Separation (CS)
Indicates the fluctuation in the output voltage of the driven channel with reference to the change of output voltage of the channel which is not driven.
