Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

KARAOKE echo IC

BU9253AS / BU9253FS / BU9255FS

The BU9253AS, BU9253FS and BU9255FS are single-chip ICs that contain all the components needed to configure a KARAOKE echo system: an A / D and D / A converter, SRAM, LPF, and mixer for mixing source signals. With these ICs, an echo function can be configured easily and with minimum external components.

●Applications

KARAOKE functions for portable stereo sets, mini component stereo sets, video CDs and DVDs, etc.

●Features

1) Echo mixing ratio is adjustable with a DC voltage.
2) A second order LPF can be configured with the internal amplifier and an attached capacitor and resistor.
3) Delay time of 131ms. (when f_{CLK} = 357kHz)
4) Internal mute function.
5) Single power supply (5V).

●Application example (for BU9253FS / BU9255FS)

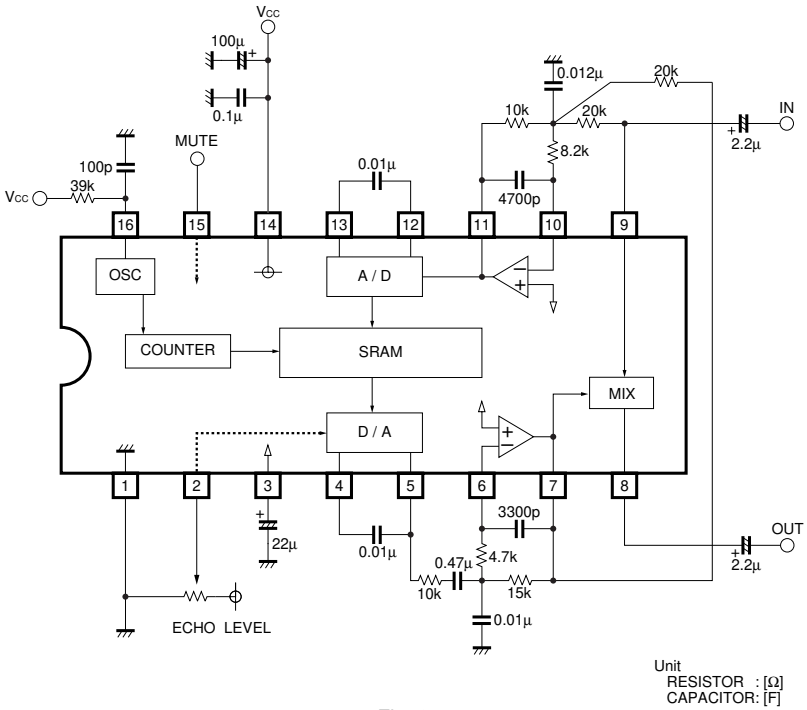

Fig. 2

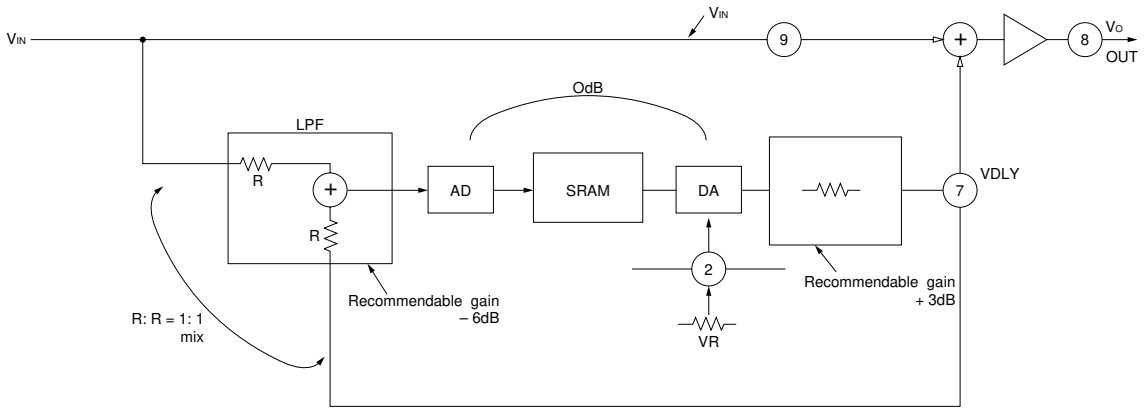
(1) Mute control functions

Pin 15 voltage (pin 17)	Mode
H	Unmuted (operating state)
M	Muted
L	Clock stop and muted

• When switching between the muted and unmuted state (pin 15 (pin 17) L→M→H), the pin 15 (pin 17) M time should be longer than one SRAM cycle. This is to assure stability by initializing the SRAM before mode switching.
Note: Figures in parentheses ( ) are for BU9253AS.

(2) Differences between BU9253AS / FS and BU9255FS
There is a difference regarding the signal stopping for muting. With BU9253AS / FS, the output from pin 8 (pin 9) is stopped during muting. With BU9255FS, the output from pin 5 is stopped during muting.

(3) Setting the echo loop gain



Echo loop ATT $V_{IN} \sim V_{DLY} \cdots A = \frac{V_{DLY}}{V_{IN}}$ (A < 1) ✻ With Pin NO. BU9253FS

Fig. 3

With V_{OMax} being the maximum amplitude of V_O at this time (when the phases, including that of the DLY circuit, are in alignment):

$$V_OMax. = (1 + A + A2 + \cdots)\, V_{IN} = \sum_{K=0}^{\infty} A^K \cdot V_{IN} = \frac{1}{1-A} V_{IN}$$

Thus, maximum allowable input is the value of V_{OMax} provided the specifications (1 = A). Assuming a feedback ratio (A) of 0.7 and a maximum V_{OUT} of 4.0 V_{P-P}, V_{IN} must be less than 1.2 V_{P-P}.
