## : ©hipsmall

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts,Customers Priority,Honest Operation, and Considerate Service",our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

## Bridgelux SMD 2835 0.5W 3V

Product Data Sheet DS56

## Introduction

The Bridgelux SMD 2835 mid power LED is hot-color targeted which ensures that the LEDs fall within their specified color bin at the typical application conditions of $85^{\circ} \mathrm{C}$. With its broad lumen coverage and wide range of CCT options, the SMD 2835 provides unparalleled design-in flexibility for indoor and outdoor lighting applications. The SMD 2835 is ideal as a drop in replacement for emitters with an industry standard $2.8 \mathrm{~mm} \times 3.5 \mathrm{~mm}$ footprint.

## Features

- Industry-standard 2835 footprint
- 9 bin color control enables tight color control
- Hot-color targeting ensures that color is within the ANSI bin at the typical application conditions of $85^{\circ} \mathrm{C}$
- Enables 3- and 5-step MacAdam ellipse custom binning kits
- RoHS compliant and Pb free
- Multiple CCT configurations for a wide range of lighting applications

## Benefits

- Lower operating and manufacturing cost
- Ease of design and rapid go-to-market
- Uniform consistent white light
- Reliable and constant white point
- Environmentally friendly, complies with standards
- Design flexibility

## Product Feature Map

Bridgelux SMD LED products come in industry standard package sizes and follow ANSI binning standards. These LEDs are optimized for cost and performance, helping to ensure highly competitive system lumen per dollar performance while addressing the stringent efficacy and reliability standards required for modern lighting applications.

## Product Nomenclature

The part number designation for Bridgelux SMD 2835 is explained as follows:

## Product Test Conditions

Bridgelux SMD 2835 LEDs are tested and binned with a 10 ms pulse of 150 mA at $T_{j}$ (junction temperature) $=T_{\text {sp }}$ (solder point temperature) $=25^{\circ} \mathrm{C}$. Forward voltage and luminous flux are binned at a $T_{j}=T_{\text {sp }}=25^{\circ} \mathrm{C}$. while color is hot targeted at a $\mathrm{T}_{\text {sp }}$ of $85^{\circ} \mathrm{C}$.

## Product Selection Guide

## Notes for Table 1 \& 2:

1. The last 6 characters (including hyphens '-') refer to flux bins, forward voltage bins, and color bin options, respectively. "00-0-00" denotes the full distribution of flux, forward voltage, and 7 SDCM color.
Example: BXEN-30E-11M-3A-00-0-0 refers to the full distribution of flux, forward voltage, and color within a 3000K 7-step ANSI standard chromaticity region with a minimum of 80 CRI , 1×1 die configuration, mid power, 3.3 V typical forward voltage.
2. Product CCT is hot targeted at $\mathrm{T}_{\text {Sp }}=85^{\circ} \mathrm{C}$. Nominal CCT as defined by ANSI C78.377-2011.
3. Listed CRIs are minimum values and include test tolerance.
4. Products tested under pulsed condition (10ms pulse width) at nominal drive current where $\mathrm{T}_{\mathrm{j}}=\mathrm{T}_{\mathrm{sp}}=25^{\circ} \mathrm{C}$.
5. Bridgelux maintains a $\pm 7.5 \%$ tolerance on luminous flux measurements, $\pm 0.1 \mathrm{~V}$ tolerance on forward voltage measurements, and $\pm 2$ tolerance on CRI measurements for the SMD 2835.
6. Refer to Table 6 and Table 7 for Bridgelux SMD 2835 Luminous Flux Binning and Forward Voltage Binning information.
7. Typical stabilized DC performance values are provided as reference only and are not a guarantee of performance.
8. Typical performance is estimated based on operation under DC (direct current) with LED emitter mounted onto a heat sink with thermal interface material and the solder point temperature maintained at $85^{\circ} \mathrm{C}$. Based on Bridgelux test setup, values may vary depending on the thermal design of the luminaire and/or the exposed environment to which the product is subjected.

## Performance at Commonly Used Drive Currents

SMD 2835 LEDs are tested to the specifications shown using the nominal drive currents in Table 1. SMD 2835 may also be driven at other drive currents dependent on specific application design requirements. The performance at any drive current can be derived from the current vs. voltage characteristics shown in Figure 2 and the relative luminous flux vs. current characteristics shown in Figure 3. The performance at commonly used drive currents is summarized in Table 3.

## Precautions

## CAUTION: CHEMICAL EXPOSURE HAZARD

Exposure to some chemicals commonly used in luminaire manufacturing and assembly can cause damage to the LED emitter. Please consult Bridgelux Application Note AN51 for additional information.

## CAUTION: EYE SAFETY

Eye safety classification for the use of Bridgelux SMD LED emitter is in accordance with IEC specification EN62471: Photobiological Safety of Lamps and Lamp Systems. SMD LED emitters are classified as Risk Group 1 when operated at or below the maximum drive current. Please use appropriate precautions. It is important that employees working with LEDs are trained to use them safely.

## CAUTION: RISK OF BURN

Do not touch the SMD LED emitter during operation. Allow the emitter to cool for a sufficient period of time before handling. The SMD LED emitter may reach elevated temperatures such that could burn skin when touched.

## CAUTION

## CONTACT WITH LIGHT EMITTING SURFACE (LES)

Avoid any contact with the LES. Do not touch the LES of the emitter or apply stress to the LES (yellow phosphor resin area). Contact may cause damage to the emitter
Optics and reflectors must not be mounted in contact with the LES (yellow phosphor resin area).

## Disclaimers

## MINOR PRODUCT CHANGE POLICY

The rigorous qualification testing on products offered by Bridgelux provides performance assurance. Slight cosmetic changes that do not affect form, fit, or function may occur as Bridgelux continues product optimization.

## STANDARD TEST CONDITIONS <br> Unless otherwise stated, LED emitter testing is performed at the nominal drive current.

## About Bridgelux: We Build Light That Transforms

At Bridgelux, we help companies, industries and people experience the power and possibility of light. Since 2002, we've designed LED solutions that are high performing, energy efficient, cost effective and easy to integrate. Our focus is on light's impact on human behavior, delivering products that create better environments, experiences and returns-both experiential and financial. And our patented technology drives new platforms for commercial and industrial luminaires.

[^0]:    Notes for Table 5:

    1. Bridgelux recommends a maximum duty cycle of $10 \%$ and pulse width of 10 ms when operating LED SMD at maximum peak pulsed current specified. Maximum peak pulsed current indicate values where LED SMD can be driven without catastrophic failures.
    2. Light emitting diodes are not designed to be driven in reverse voltage and will not produce light under this condition. Maximum rating provided for reference only.
    3. The maximum drive current for LM80 test results is based on the nominal drive current listed.
[^1]:    Note for Figure 3

    1. Bridgelux does not recommend driving high power LEDs at low currents. Doing so may produce unpredictable results. Pulse width modulation (PWM) is recommended for dimming effects.

    2. Characteristics shown for neutral white based on 4000 K and 80 CRI .
    3. Characteristics shown for cool white based on 6500 K and 80 CRI .
    4. For other color SKUs, the shift in color will vary. Please contact your Bridgelux Sales Representative for more information.
[^3]:    Notes for Table 9:

    1. Measurements are performed after allowing the LEDs to return to room temperature
    2. $T_{\text {sld }}$ : reflow soldering temperature: $T_{a}$ : ambient temperature
[^4]:    Note for Figure 12:

    1. When using a pick and place machine, choose a nozzle that has a larger diameter than the LED's emitting surface. Using a Pick-and-Place nozzle with a smaller diameter than the size of the LEDs emitting surface will cause damage and may also cause the LED to not illuminate.
