

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

Address: A1208, Overseas Decoration Building, #122 Zhenhua RD., Futian, Shenzhen, China

## Chibitronics Effects stickers and stencil

- CBI011

Effects Stickers generate an effect to control your LEDs (or other output!). This pack contains four pre-programmed and craft-friendly effects: blink, fade, twinkle and heartbeat

Circuit Stickers are electronic stickers that you can use to build glowing, sensing, and interactive projects without any complicated equipment or programming skills. All you need is your imagination.

Building circuits with them is fun and easy -- just stick them onto a surface like you would with a normal sticker, and build up a circuit by sticking several stickers together and adding a battery. They're an approachable way to learn and create electronics through craft, whether you're just starting out with circuits or creating complex interactive artworks.

- light, paper-thin and flexible circuit boards cut into small, fun shapes
- anisotropic conductive adhesive on the back sticks to most surfaces
- can be used with virtually any conductive materials as "wiring"-- such as conductive threads and paints or even wires and aluminium foil from your kitchen.

Chibitronics even have a great learning portal with tutorials and additional resources

Comes with a craft stencil for planning complicated circuits using accurate pad shapes for effects and lights
