imall

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from, Europe, America and south Asia, supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts, Customers Priority, Honest Operation, and Considerate Service", our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip, ALPS, ROHM, Xilinx, Pulse, ON, Everlight and Freescale. Main products comprise IC, Modules, Potentiometer, IC Socket, Relay, Connector. Our parts cover such applications as commercial, industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

Measuring Methods

1) Resonant frequency / Resonant impedance

The piezo electric diaphragm should be clamped at a node point (as shown in the following figure) to be free from any mechanical stress. Measure its resonant frequency and resonant impedance by using a vector impedance analyzer or equivalent.

When the input frequency is swept within 2 KHz to 8 KHz, the resonant frequency is defined as the frequency where the impedance shows minimum value. This impedance should be the resonant impedance.

2) Static capacitance

The electrostatic capacitance should be measured at 120 Hz by using an L.C.R. meter (ex. HP4194A(H.P.)) or equivalent. The part should be clamped in the same way as the measurement or resonant frequency / resonant impedance mentioned above.

Mechanical Characteristics

| Item | Test Condition | Evaluation Standard |
|-------------------------|---|-----------------------------------|
| Solderability | Stripped wires of lead wires are immersed in | 90% min. of the stripped wires |

| | solder bath of 270 \pm 5°C for 3 \pm 0.5 seconds. | the edge of the terminal) |
| Lead Wire Pull Strength | The horizontal force of 3.0N (0.306kg) should | No damage or cutting off. |
| | be applied to the double lead wire for 30 sec. | |
| Vibration | The diaphragm should be measured after | The value of the resonant |
| | applying a vibration amplitude of 1.5 mm with | frequency should be ±10% of the |
| | 10 to 55 Hz band of vibration frequency to each | initial measurements. |
| | of the 3 perpendicular directions for 2 hours. | Electrostatic capacitance should |
| | | be ±20% compared with the initial |
| | | measurement. The SPL should |
| | | be within ±10dB compared |
| | | with the initial measurement. |
