

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

# CHY100 ChiPhy™ Family

## Charger Interface Physical Layer IC

### Product Highlights

- Fully supports Quick Charge 2.0 specification
  - Class A: 5 V, 9 V, and 12 V output voltage
  - Class B: 5 V, 9 V, 12 V, and 20 V output voltage
- USB battery charging specification revision 1.2 compatible
  - Automatic USB DCP shorting D+ to D- line
  - Default 5 V mode operation
- Supports TOPSwitch and TinySwitch
- Very low power consumption
  - Below 1 mW at 5 V output
- Fail safe operation
  - Adjacent pin-to-pin short-circuit fault
  - Open circuit pin fault

### Typical Applications

- Battery chargers for smart phones, tablets, netbooks, digital cameras, and bluetooth accessories
- USB power output ports

### Description

CHY100 is a low-cost USB high-voltage dedicated charging port (HVDCP) interface IC for the Quick Charge 2.0 specification. It incorporates all necessary functions to add Quick Charge 2.0 capability to Power Integrations' switcher ICs such as TOPSwitch or TinySwitch and other solutions employing traditional feedback schemes.

CHY100 supports the full output voltage range of either Class A or Class B. Optionally Class B can be inhibited for protecting the battery charger from accidental damage.

CHY100 automatically detects whether a connected Powered Device (PD) is Quick Charge 2.0 capable before enabling output voltage adjustment. If a PD not compliant to Quick Charge 2.0 is detected the CHY100 disables output voltage adjustment to ensure safe operation with legacy 5 V only USB PDs.

Figure 1. Typical Application Schematic.

SO-8 (D Package)

Figure 2. Package Option.

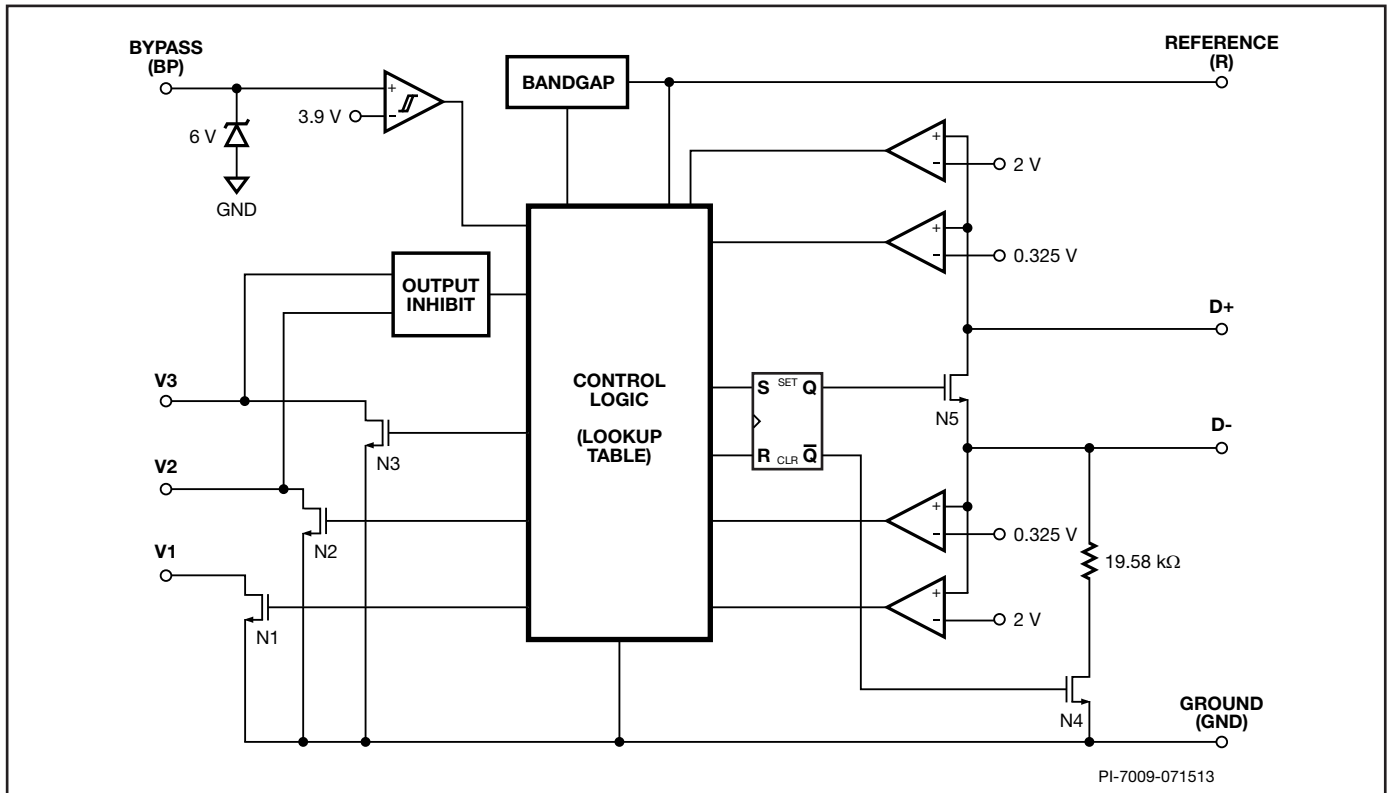

Figure 3. Functional Block Diagram.

## Pin Functional Description

### GROUND (GND) Pin

Ground.

### V1 Pin

Open Drain input of output voltage adjustment switch. Active for 9 V, 12 V, and 20 V output setting.

### V2 Pin

Open Drain input of output voltage adjustment switch. Active for 12 V, and 20 V output setting.

### V3 Pin

Open Drain input of output voltage adjustment switch. Active for 20 V output setting.

### BYPASS (BP) Pin

Connection point for an external bypass capacitor for the internally generated supply voltage.

### REFERENCE (R) Pin

Connected to internal band-gap reference. Provides reference current through connected resistor.

### DATA LINE D+ Pin

USB D+ data line input.

### DATA LINE D- Pin

USB D- data line input.

Figure 4. Pin Configuration.

## Functional Description

CHY100 is a low-cost USB high-voltage dedicated charging port (HVDCP) interface IC for the Quick Charge 2.0 specification. It incorporates all necessary functions to add Quick Charge 2.0 capability to Power Integrations' integrated switcher ICs such as TOPSwitch or TinySwitch.

CHY100 also supports other solutions with traditional feedback schemes like optocoupler and secondary reference regulator TL431 as depicted in Figure 5.

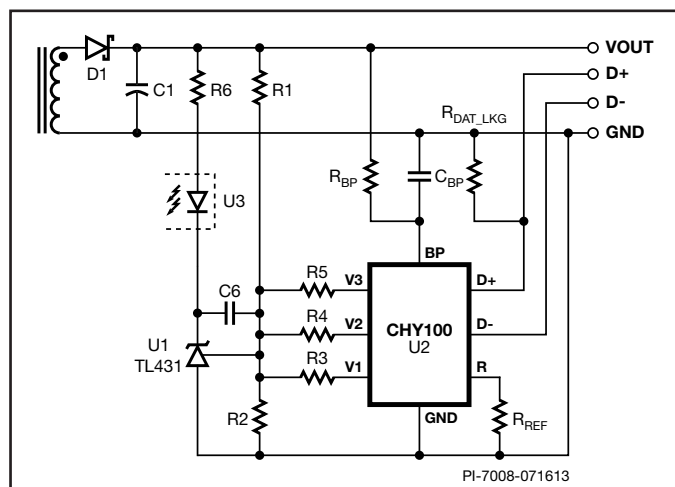

Figure 5. CHY100 with Traditional Output Regulation (CV Only).

CHY100 supports the full output voltage range of Quick Charge 2.0 Class A (5 V, 9 V, or 12 V) or Class B (5 V, 9 V, 12 V, or 20 V). It automatically detects either Quick Charge 2.0 capable powered devices (PD) or legacy PDs compliant with the USB Battery Charging Specification revision 1.2 and only enables output voltage adjustment accordingly.

### Shunt Regulator

The internal shunt regulator clamps the BYPASS pin at 6 V when current is provided through an external resistor ( $R_{BP}$  in Figure 5). This facilitates powering of CHY100 externally over the wide power supply output voltage range of 5 V to 20 V. Recommended values are  $R_{BP} = 4.53 \text{ k}\Omega$  and  $C_{BP} = 220 \text{ nF}$ .

### BYPASS Pin Undervoltage

The BYPASS pin undervoltage circuitry resets the CHY100 when the BYPASS pin voltage drops below 3.9 V. Once the BYPASS pin voltage drops below 3.9 V it must rise back to 4 V to enable correct operation.

### Reference Input

Resistor  $R_{REF}$  at the REFERENCE pin is connected to an internal band gap reference and provides an accurate reference current for internal timing circuits. The recommended value is  $R_{REF} = 127 \text{ k}\Omega$ .

### Quick Charge 2.0 Interface

At power-up CHY100 turns on switch N5 (see Figure 3) in 20 ms or less after the BYPASS pin voltage has reached 4 V. Switch N4 and output switches N1 to N3 remain off. This sets the default 5 V output voltage level. With D+ and D- short-circuited the normal handshake between the AC-DC adapter (DCP) and powered devices (PD) as described in the USB Battery Charging Specification 1.2 can commence. After switch N5 has been turned on CHY100 starts monitoring the voltage level at D+. If it continuously stays above  $V_{DAT(REF)}$  (typ. 0.325 V) and below  $V_{SEL(REF)}$  (typ. 2 V) for at least 1.25 seconds CHY100 will enter Quick Charge 2.0 operation mode. If the voltage at D+ drops any time below 0.325 V CHY100 resets the 1.25 seconds timer and stays in USB Battery Charging Specification 1.2 compatibility mode with a default output voltage of 5 V.

Once CHY100 has entered Quick Charge 2.0 operation mode switch N5 will be turned off. Additionally switch N4 is turned on connecting a 19.53 k $\Omega$  pull-down resistor to D-. As soon as the voltage at D- has dropped low (<0.325 V) for at least 1 ms CHY100 starts accepting requests for different AC-DC adapter output voltages by means of applied voltage levels at data lines D+ and D- through the powered device. Table 1 summarizes the output voltage lookup table, corresponding AC-DC adapter output voltages and status of switches N1 to N3.

D+	D-	Output	Switch Status
0.6 V	0.6 V	12 V	N1 = N2 = On, N3 = Off
3.3 V	0.6 V	9 V	N1 = On, N2 = N3 = Off
3.3 V	3.3 V	20 V	N1 = N2 = N3 = On
0.6 V	GND	5 V (default)	N1 = N2 = N3 = Off

Table 1. Output Voltage Lookup Table.

For Quick Charge 2.0 Class A support only, the V3 pin has to be connected to the BYPASS pin (directly or through a resistor up to 100 k $\Omega$ ). This will inhibit any requests for setting a 20 V output.

At USB cable disconnect the voltage level at D+ is pulled down by resistor  $R_{DAT(LKG)}$  (see Figure 5). Once it drops below 0.325 V CHY100 will turn on switch N5 (thereby short-circuiting D+ and D-) and turns off switches N1 to N4. This sets the default output voltage of 5 V. The recommended value for  $R_{DAT(LKG)} = 390 \text{ k}\Omega$ .

### Absolute Maximum Ratings

BYPASS Pin Voltage .....	-0.3 to 9 V	Operating Junction Temperature.....	-40 °C to +150 °C
REFERENCE Pin Voltage .....	-0.3 to 9 V	Operating Ambient Temperature .....	-40 °C to 105 °C
V1/V2/V3 Pin Voltage .....	-0.3 to 9 V	Storage Temperature .....	-65 °C to 150 °C

### Life Support Policy

POWER INTEGRATIONS PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT OF POWER INTEGRATIONS. As used herein:

1. A Life support device or system is one which, (i) is intended for surgical implant into the body, or (ii) supports or sustains life, and (iii) whose failure to perform, when properly used in accordance with instructions for use, can be reasonably expected to result in significant injury or death to the user.
2. A critical component is any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.
