TDK

Mid-high Voltage Ceramic Capacitors(Disk with Lead) Low Dissipation at High Frequency CK45-RR Series

Conformity to RoHS Directive

FEATURES

- High voltage ceramic capacitors series, low dissipation factor and higher reliability has been achieved through the use of TDK original dielectric and copper for electrode material due to nice matching of the ceramic dielectrics material for low dissipation factor, and copper for electrode.
- These RR type ceramic capacitors are mainly used as withstand voltage protection for power transistors and diodes of switching power sources, for controlling noise, and for absorbing high-frequency pulses such as from color TV horizontal output circuits. The high density and high operating frequency of switching power sources create high equipment temperatures.
- Low dissipation factor, and decreased self-heating temperature in the high frequency, and high voltage application.
- These products shall conform to RoHS Directive due to lead(Pb) free of lead wire and internal solder material.
