

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

## High-precision detection of fluid and air pressure

### Allows high-precision fluid pressure management

The analog voltage output of the sensor head can achieve a high-precision sensing of  $\pm 1\%$  F.S. (at a normal temperature of 23 °C 73.4 °F).

### Oil-less single-layer diaphragm

Oil is not encapsulated in the diaphragm of the pressure sensing portion. No need to worry that oil will leak into the medium when the sensor head is damaged.

### Compact stainless body

Compact size of HEX. 22 × 59 mm 0.866 × 2.323 in (excluding the screws). The body is also stainless so it can be used in various environments.

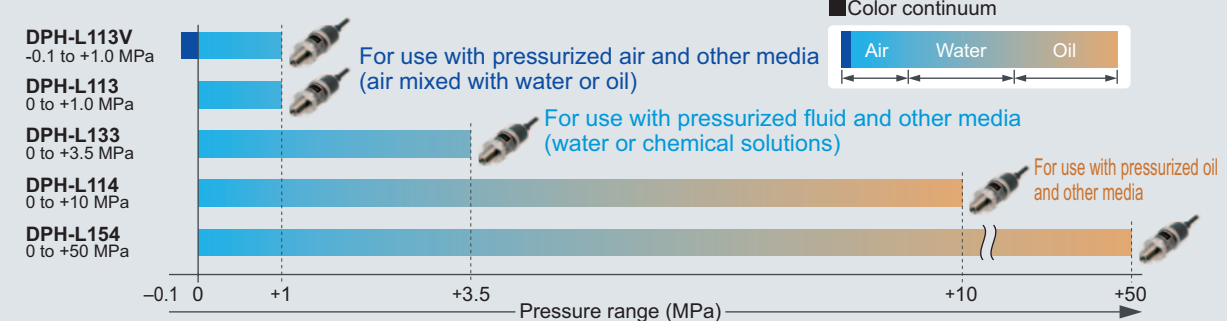

### Strong against pressure surges from throttle loading

Controls pressure surges and reduces sensor failure.

## APPLICATIONS

Transport of glass sheets after washing  
(Air pressure with waterdrops)

Management of plastic filling machine pressure  
(Fluid pressure)

Management of press pressure  
(Oil pressure)

The dual display means that the “current value” and the “threshold value”, it makes direct setting of threshold value

Equipped with a 30 mm 1.181 in square compact-sized dual display. Because the current value and the threshold value can be checked at the same time, the threshold value can be set and checked smoothly without having to switch screen modes. ON / OFF operations are still carried out while the threshold values are being set, so setting to the same sensitivity as dial control-type sensors is possible. And naturally a key lock function is also equipped.

### 3-color display (Red, Green, Orange)

The main display changes color in line with changes in the status of output ON / OFF operation, and it also changes color while setting is in progress. The sensor status can therefore be understood easily, and operating errors can be reduced.

### Equipped with new functions optimal for fluid pressure

Equipped with functions optimal for fluid pressure management while inheriting the operability of the DP-100 series.

- Peak / Bottom hold 2 (output-linked)  
When output turns on (or off), the controller's digital display (current value) is reset and peak / bottom hold operation starts. For example, this functionality could be used to verify the peak pressure for an industrial press each time a workpiece is loaded.
- Current value hold  
The controller's digital display (current value) is held while external input is on. By activating external input the moment you wish to capture the pressure value, you can pause and verify the display.

## MOUNTING

### Tight installation to panels is possible

An exclusive mounting bracket MS-DP1-2 that is suitable for 1 to 6 mm 0.039 to 0.236 in panel thickness is available.

## I/O CIRCUIT AND WIRING DIAGRAMS

### DPC-L101

NPN output type

#### I/O circuit diagram

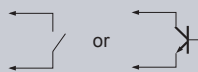

- Notes: 1) Set the output load resistance during analog current output to 250 Ω (max.).  
2) Note that a voltage of 5 V or higher is generated during analog current output.

Symbols ... D<sub>1</sub> to D<sub>3</sub>: Reverse supply polarity protection diode  
Z<sub>D1</sub>, Z<sub>D2</sub>: Surge absorption zener diode  
Tr<sub>1</sub>, Tr<sub>2</sub>: NPN output transistor

\*1

Non-voltage contact or NPN open-collector transistor

High (5 to 30 V DC, or open): Invalid  
Low (0.4 V DC or less): Valid

#### For independent use of sensor head

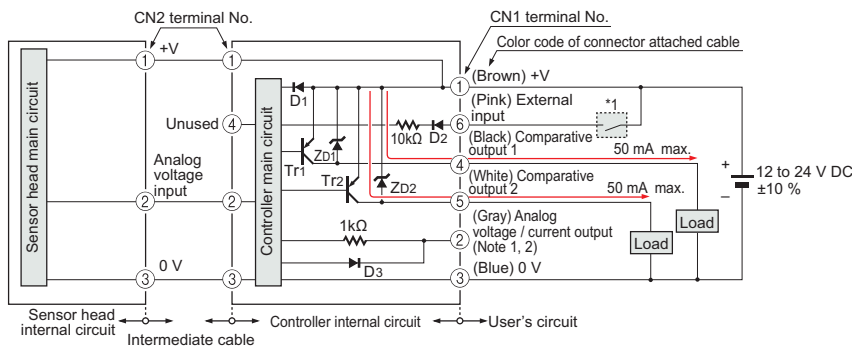

- Notes: 1) When the sensor head is used independently, devices connected to the analog output must have an input impedance set at 10 kΩ or more and load capacity 1,000 pF or less.  
2) No short-circuit protection circuit is provided for analog voltage output. Do not connect directly to a power supply.  
3) The pressure port and internal circuitry are connected by a capacitor. Do not apply voltage in excess of the specifications' dielectric strength between the pressure port and wiring.  
4) The transparent tube attached to the cable is not used and should be cut off at the base.

### DPC-L101-P

PNP output type

#### I/O circuit diagram

## PRECAUTIONS FOR PROPER USE

Refer to p.1472 for general precautions.

- Never use this product as a sensing device for personnel protection.
- In case of using sensing devices for personnel protection, use products which meet laws and standards, such as OSHA, ANSI or IEC etc., for personnel protection applicable in each region or country.
- The **DPH-L100** series is designed for use with air and non-corrosive gas. It cannot be used with liquid or corrosive and inflammable gases.

### Part description

### Others

- Never remove the throttle.
- Use within the rated pressure range.
- Do not apply pressure exceeding the pressure withstandability value. The diaphragm will get damaged and correct operation shall not be maintained.
- Do not use during the initial transient time (controller: 0.5 sec. approx, sensor head: 50 ms approx.) after the power supply is switched on.
- Avoid dust, dirt, and steam.
- Take care that the sensor does not come in direct contact with water, oil, grease, or organic solvents, such as, thinner, etc.
- Do not insert wires, etc., into the pressure port. The diaphragm will get damaged and correct operation shall not be maintained.
- Do not operate the keys with pointed or sharp objects.

### Wiring

- Make sure that the power supply is off while wiring.
- Verify that the supply voltage variation is within the rating.
- If power is supplied from a commercial switching regulator, ensure that the frame ground (F.G.) terminal of the power supply is connected to an actual ground.
- In case noise generating equipment (switching regulator, inverter motor, etc.) is used in the vicinity of this sensor, connect the frame ground (F.G.) terminal of the equipment to an actual ground.
- Do not run the wires together with high-voltage lines or power lines or put them in the same raceway. This can cause malfunction due to induction.
- Incorrect wiring will cause problems with operation.
