

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

Address: A1208, Overseas Decoration Building, #122 Zhenhua RD., Futian, Shenzhen, China

Extended Software License

CPI2-ACI

CPI2-ACI - Application Control Interface License

The CPI2-ACI Application Control Interface License is a hardware-locked type of license that enables the following premium features of the ChipProg-02 software package:

- **Using the ChipProg Software Development Kit named "Application Control Interface" (ACI) to control the programmers from other applications.**

ACI enables full programmatic control of the device programming process: access to the device memory, loading files and projects, setting programming options, launching programming operations, etc. ACI may be used in both single-site and gang modes to control each programming site individually.

- **Controlling the programmers from the National Instruments LabVIEW shell.**

The ACI package includes usage examples in C/C++, C# and Visual Basic. You can try ACI without purchasing it, because ACI is available whenever programmer executable is started in Demo mode.

- **Controlling the programmers on-the-fly with special utility named OFControl.exe.**

OFControl.exe is a small, easy-to-use console application that automates and speeds up device programming. Use of this utility does not require programming skills. OFControl.exe accepts a set of command line options to control a programmer that has been already launched and is running, without restarting it. With OFControl.exe you can instruct the programmer to set device type, change programming options, load files and projects, launch device programming operations, etc. OFControl.exe may be launched multiple times on the same programmer, performing operations in a loop.

Note that the basic ChipProg-02 software package included in the CPI2-B1 kit provides command line and GUI controls only but it does not enable the premium options above.

Each purchased CPI2-ACI license unlocks a single CPI2-B1 hardware. Unlocking multiple CPI2-B1 programmers requires purchasing additional CPI2-ACI licenses. For example, for a 4-site programming cluster comprised of four CPI2-B1 programmers, one has to buy four CPI2-ACI licenses and activate each of them in a certain CPI2-B1 programmer.

A CPI2-ACI license can be purchased together with a programmer, or at a later time. To activate a license an activation request has to be sent to Phytion. We will return to a licensee an activation code to be entered in a certain field of ChipProg2 software License Manager. This will modify the CPI2-B1 programmer's firmware and tie the license to the programmer hardware.
