## CPI2-MUX

### *CPI2-MUX – Channel Multiplexing License*

The CPI2-MUX Channel Multiplexing License locks to motherboards of CPI2-Gxxxx gang device programmers and enables multiplexing of any CPI2-GM1 module plugged into the motherboard, on which the license was activated. With channel multiplexing enabled, CPI-GM1 can program two target devices (one after another) without the need to mechanically manipulate the programming fixture.

A CPI2-MUX license can be purchased together with a CPI2-Gxxxx gang programmer or at a later time. To activate a license an activation request has to be sent to Phyton. We will return to a licensee an activation code to be entered in a certain field of ChipProg2 software License Manager. This will modify the programmer's firmware and tie the license to the motherboard with a certain serial number.
