

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

108 dB, 192 kHz 4-In, 8-Out TDM CODEC

FEATURES

- ◆ Four 24-bit A/D, Eight 24-bit D/A Converters
- ◆ ADC Dynamic Range
 - 105 dB Differential
 - 102 dB Single-Ended
- ◆ DAC Dynamic Range
 - 108 dB Differential
 - 105 dB Single-Ended
- ◆ ADC/DAC THD+N
 - -98 dB Differential
 - -95 dB Single-Ended
- ◆ Compatible with Industry-Standard Time Division Multiplexed (TDM) Serial Interface
- ◆ DAC Sampling Rates up to 192 kHz
- ◆ ADC Sampling Rates up to 96 kHz
- ◆ Programmable ADC High-Pass Filter for DC Offset Calibration
- ◆ Logarithmic Digital Volume Control
- ◆ Hardware Mode or Software I²C™ & SPI™
- ◆ Supports Logic Levels Between 5 V and 1.8 V

GENERAL DESCRIPTION

The CS42435 CODEC provides four multi-bit analog-to-digital and eight multi-bit digital-to-analog delta-sigma converters. The CODEC is capable of operation with either differential or single-ended inputs and outputs, in a 52-pin MQFP package.

Four fully differential, or single-ended, inputs are available on stereo ADC1 and ADC2. Digital volume control is provided for each ADC channel, with selectable overflow detection. An auxiliary serial input is available for an additional two channels of PCM data.

All eight DAC channels provide digital volume control and can operate with differential or single-ended outputs.

The CS42435 is available in a 52-pin MQFP package in Commercial (-40°C to +85°C) and Automotive (-40°C to +105°C) grades. The CDB42438 Customer Demonstration Board is also available for device evaluation and implementation suggestions. Please refer to [“Ordering Information” on page 57](#) for complete ordering information.

The CS42435 is ideal for audio systems requiring wide dynamic range, negligible distortion and low noise, such as A/V receivers, DVD receivers, and automotive audio systems.

WARNING: Operation at or beyond these limits may result in permanent damage to the device. Normal operation is not guaranteed at these extremes.

Notes:

1. Typical Analog input/output performance will slightly degrade at VA = 3.3 V.
2. The ADC_SDOOUT may not meet timing requirements in Double-Speed Mode.
3. Any pin except supplies. Transient currents of up to ±100 mA on the analog input pins will not cause SCR latch-up.
4. The maximum over/under voltage is limited by the input current.

Notes:

- Guaranteed by design. The DC current draw represents the allowed current draw from the AOUT pin due to typical leakage through the electrolytic DC-blocking capacitors.
- One LSB of triangular PDF dither is added to data.
- Guaranteed by design. See [Figure 3](#). R_L and C_L reflect the recommended minimum resistance and maximum capacitance required for the internal op-amp's stability and signal integrity. In this circuit topology, C_L will effectively move the dominant pole of the two-pole amp in the output stage. Increasing this value beyond the recommended 100 pF can cause the internal op-amp to become unstable. See ["External Filters" on page 48](#) for a recommended output filter.

Notes:

17. After powering up the CS42435, $\overline{\text{RST}}$ should be held low after the power supplies and clocks are settled.
18. See [Table 5 on page 41](#) for suggested MCLK frequencies.
19. VLS is limited to nominal 2.5 V to 5.0 V operation only.
20. ADC does not meet timing specification for Quad-Speed Mode.

| DC Current Source/Sink (Note 29) | | - | - | 10 | μA |
| FILT+ Nominal Voltage | | - | VA | - | V |

Notes:

25. Normal operation is defined as $\overline{RST} = HI$ with a 997 Hz, 0 dBFS input to the DAC and AUX port, and a 1 kHz, -1 dB analog input to the ADC port sampled at the highest F_s for each speed mode. DAC outputs are open, unless otherwise specified.
26. I_{DT} measured with no external loading on pin (SDA).
27. Valid with the recommended capacitor values on FILT+ and VQ. Increasing the capacitance will also increase the PSRR.
28. Power-Down Mode is defined as $\overline{RST} = LO$ with all clocks and data lines held static and no analog input.
29. Guaranteed by design. The DC current draw represents the allowed current draw from the VQ pin due to typical leakage through the electrolytic de-coupling capacitors.
