

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

24-Bit, 192 kHz Stereo Audio CODEC

D/A Features

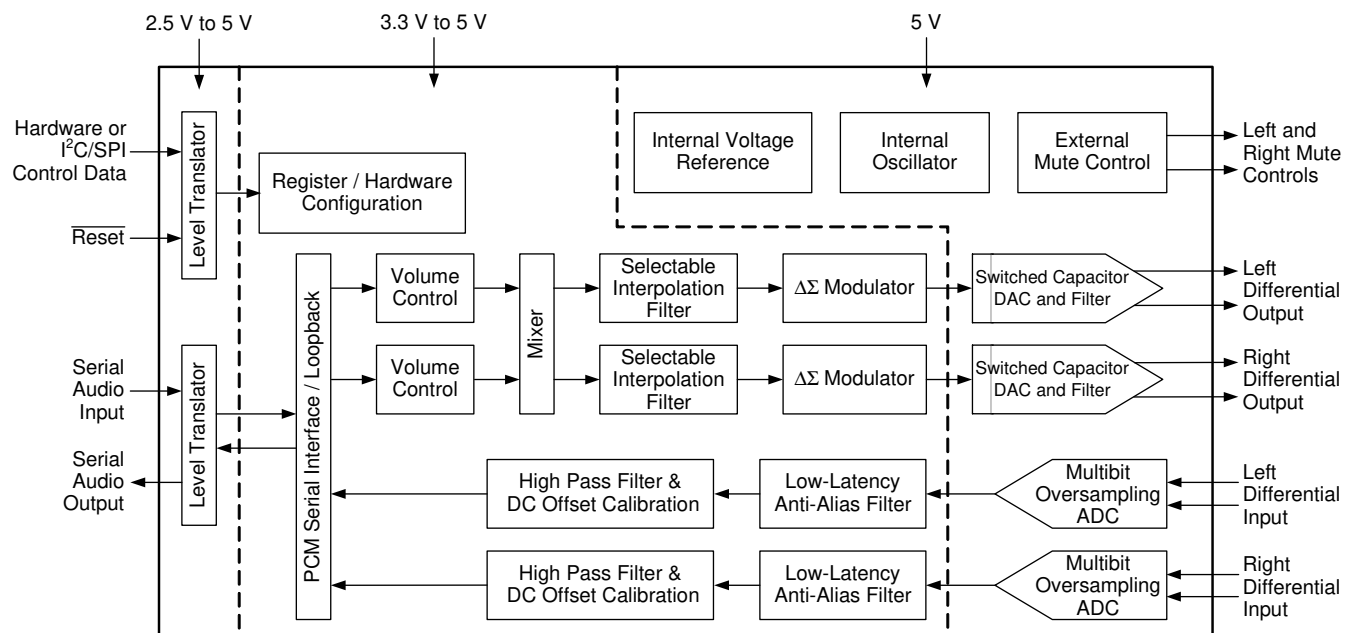

- High Performance
 - 114 dB Dynamic Range
 - -100 dB THD+N
- Up to 192 kHz Sampling Rates
- Differential Analog Architecture
- Volume Control with Soft Ramp
 - 1 dB Step Size
 - Zero Crossing Click-free Transitions
- Selectable Digital Filters
 - Fast and Slow Roll Off
- ATAPI Mixing Functions
- Selectable Serial Audio Interface Formats
 - Left Justified up to 24-bit
 - I²S up to 24-bit
 - Right Justified 16-, 18-, 20-, and 24-Bit
- Control Output for External Muting
- Selectable 50/15 μs De-emphasis

A/D Features

- High Performance
 - 114 dB Dynamic Range
 - -100 dB THD+N
- Up to 192 kHz Sampling Rates
- Differential Analog Architecture
- Multi-bit Delta Sigma Conversion
- High-pass Filter or DC Offset Calibration
- Low-Latency Digital Anti-alias Filtering
- Automatic Dithering of 16-bit Data
- Selectable Serial Audio Interface Formats
 - Left Justified up to 24-bit
 - I²S up to 24-bit

System Features

- Direct Interface with 5V to 2.5V Logic Levels
- Internal Digital Loopback
- On-chip Oscillator
- Stand-Alone or Control Port Functionality

Stand-Alone Mode Feature Set

- System Features
 - Serial Audio Port Master or Slave Operation
 - Internal Oscillator for Master Clock
- D/A Features
 - Auto-mute on Static Samples
 - 44.1 kHz 50/15 μ s De-emphasis Available
 - Selectable Serial Audio Interface Formats
 - ♦ Left Justified up to 24-bit
 - ♦ I²S up to 24-bit
- A/D Features
 - Automatic Dithering for 16-bit Data
 - High-pass Filter
 - Selectable Serial Audio Interface Formats
 - ♦ Left Justified up to 24-bit
 - ♦ I²S up to 24-bit

Software Mode Feature Set

- System Features
 - Serial Audio Port Master or Slave Operation
 - Internal Oscillator for Master Clock
 - Internal Digital Loopback Available
- D/A Features
 - Selectable Auto-mute
 - Selectable Interpolation Filters
 - Selectable 32-, 44.1-, and 48-kHz De-emphasis Filters
 - Configurable ATAPI Mixing Functions
 - Configurable Volume and Muting Controls
 - Selectable Serial Audio Interface Formats
 - ♦ Left Justified up to 24-bit
 - ♦ I²S up to 24-bit
 - ♦ Right Justified 16, 18, 20, and 24-bit
- A/D Features
 - Selectable Dithering for 16-bit Data
 - Selectable High-pass Filter or DC Offset Calibration
 - Selectable Serial Audio Interface Formats
 - ♦ Left Justified up to 24-bit
 - ♦ I²S up to 24-bit

General Description

The CS4272 is a high-performance, integrated audio CODEC. The CS4272 performs stereo analog-to-digital (A/D) and digital-to-analog (D/A) conversion of up to 24-bit serial values at sample rates up to 192 kHz.

The D/A offers a volume control that operates with a 1 dB step size. It incorporates selectable soft ramp and zero crossing transition functions to eliminate clicks and pops.

The D/A's integrated digital mixing functions allow a variety of output configurations ranging from a channel swap to a stereo-to-mono downmix.

Standard 50/15 μ s de-emphasis is available for sampling rates of 32, 44.1, and 48 kHz for compatibility with digital audio programs mastered using the 50/15 μ s pre-emphasis technique.

Integrated level translators allow easy interfacing between the CS4272 and other devices operating over a wide range of logic levels.

An on-chip oscillator eliminates the need for an external crystal oscillator circuit. This can reduce overall design cost and conserve circuit board space. The CS4272 automatically uses the on-chip oscillator in the absence of an applied master clock, making this feature easy to use.

Independently addressable high-pass filters are available for the right and left channel of the A/D. This allows the A/D to be used in a wide variety of applications where one audio channel and one DC measurement channel is desired.

The CS4272's wide dynamic range, negligible distortion, and low noise make it ideal for applications such as A/V receivers, DVD-R, CD-R, digital mixing consoles, effects processors, set-top box systems, and automotive audio systems.

1. PIN DESCRIPTIONS - SOFTWARE MODE

Pin Name	#	Pin Description
XTO XTI	1,2	Crystal Connections (Input/Output) - I/O pins for an external crystal which may be used to generate MCLK. See “Crystal Applications (XTI/XTO)” on page 24 or “Crystal Applications (XTI/XTO)” on page 27.
MCLK	3	Master Clock (Input/Output) -Clock source for the delta-sigma modulators. See “Crystal Applications (XTI/XTO)” on page 24 or “Crystal Applications (XTI/XTO)” on page 27.
LRCK	4	Left Right Clock (Input/Output) - Determines which channel, Left or Right, is currently active on the serial audio data line.
SCLK	5	Serial Clock (Input/Output) - Serial clock for the serial audio interface.
SDOUT	6	Serial Audio Data Output (Output) - Output for two’s complement serial audio data.
SDIN	7	Serial Audio Data Input (Input) - Input for two’s complement serial audio data.
DGND	8	Digital Ground (Input) - Ground reference for the internal digital section.
VD	9	Digital Power (Input) - Positive power for the internal digital section.
VL	10	Logic Power (Input) - Positive power for the digital input/output interface.
SCL/CCLK	11	Serial Control Port Clock (Input) - Serial clock for the serial control port.
SDA/CDIN	12	Serial Control Data (Input/Output) - SDA is a data I/O in I ² C mode. CDIN is the input data line for the control port interface in SPI mode.
AD0/ $\overline{\text{CS}}$	13	Address Bit 0 (I²C) / Control Port Chip Select (SPI) (Input) - AD0 is a chip address pin in I ² C mode; $\overline{\text{CS}}$ is the chip select signal for SPI format.
$\overline{\text{RST}}$	14	Reset (Input) - The device enters a low power mode when this pin is driven low.
VCOM	15	Common Mode Voltage (Output) - Filter connection for internal common mode voltage.
AINA- AINA+ AINB+ AINB-	16, 17, 18, 19	Differential Analog Input (Input) - The full scale differential input signals are presented to the delta-sigma modulators. The full scale level is specified in the ADC Analog Characteristics specification table.
VA	20	Analog Power (Input) - Positive power for the internal analog section.
AGND	21	Analog Ground (Input) - Ground reference for the internal analog section.
FILT+	22	Positive Voltage Reference (Output) - Positive reference voltage for the internal sampling circuits.
$\overline{\text{AMUTE C}}$	23	Channel A Mute Control (Output) - This pin is active during power-up initialization, reset, muting, when master clock to left/right clock frequency ratio is incorrect, or power-down.
AOUTA- AOUTA+ AOUTB+ AOUTB-	24, 25, 26, 27	Differential Analog Audio Output (Output) - The full scale differential output level is specified in the DAC Analog Characteristics specification table.
$\overline{\text{BMUTE C}}$	28	Channel B Mute Control (Output) - This pin is active during power-up initialization, reset, muting, when master clock to left/right clock frequency ratio is incorrect, or power-down.

2. PIN DESCRIPTIONS - STAND-ALONE MODE

Pin Name	#	Pin Description
XTO XTI	1,2	Crystal Connections (<i>Input/Output</i>) - I/O pins for an external crystal which may be used to generate the master clock. See “Crystal Applications (XTI/XTO)” on page 24 or “Crystal Applications (XTI/XTO)” on page 27.
MCLK	3	Master Clock (<i>Input/Output</i>) - Clock source for the delta-sigma modulators. See “Crystal Applications (XTI/XTO)” on page 24 or “Crystal Applications (XTI/XTO)” on page 27.
LRCK	4	Left Right Clock (<i>Input/Output</i>) - Determines which channel, Left or Right, is currently active on the serial audio data line.
SCLK	5	Serial Clock (<i>Input/Output</i>) - Serial clock for the serial audio interface.
SDQOUT (M/S)	6	Serial Audio Data Output (<i>Output</i>) - Output for two’s complement serial audio data. This pin must be pulled-up or pulled-down to select Master or Slave Mode. See “Master/Slave Mode” on page 24.
SDIN	7	Serial Audio Data Input (<i>Input</i>) - Input for two’s complement serial audio data.
DGND	8	Digital Ground (<i>Input</i>) - Ground reference for the internal digital section.
VD	9	Digital Power (<i>Input</i>) - Positive power for the internal digital section.
VL	10	Logic Power (<i>Input</i>) - Positive power for the digital input/output interface.
M0	11	Mode Select 0 (<i>Input</i>) - In conjunction with M1, selects operating mode. Functionality is described in the Hardware Mode Speed Configuration table.
M1	12	Mode Select 1 (<i>Input</i>) - In conjunction with M0, selects operating mode. Functionality is described in the Hardware Mode Speed Configuration table.
I2S/LJ	13	Serial Audio Interface Select (<i>Input</i>) - Selects either the left-justified or I ² S format for the Serial Audio Interface.
RST	14	Reset (<i>Input</i>) - The device enters a low power mode when this pin is driven low.
VCOM	15	Common Mode Voltage (<i>Output</i>) - Filter connection for internal common mode voltage.
AINA- AINA+ AINB+ AINB-	16, 17, 18, 19	Differential Analog Input (<i>Input</i>) - The full scale differential input signals are presented to the delta-sigma modulators. The full scale level is specified in the ADC Analog Characteristics specification table.
VA	20	Analog Power (<i>Input</i>) - Positive power for the internal analog section.
AGND	21	Analog Ground (<i>Input</i>) - Ground reference for the internal analog section.
FILT+	22	Positive Voltage Reference (<i>Output</i>) - Positive reference voltage for the internal sampling circuits.
AMUTE $\overline{\text{C}}$	23	Channel A Mute Control (<i>Output</i>) - This pin is active during power-up initialization, reset, muting, when master clock to left/right clock frequency ratio is incorrect, or power-down.
AOUTA- AOUTA+ AOUTB+ AOUTB-	24, 25, 26, 27	Differential Analog Audio Output (<i>Output</i>) - The full scale differential output level is specified in the Analog Characteristics specification table.
BMUTE $\overline{\text{C}}$	28	Channel B Mute Control (<i>Output</i>) - This pin is active during power-up initialization, reset, muting, when master clock to left/right clock frequency ratio is incorrect, or power-down.

3. CHARACTERISTICS AND SPECIFICATIONS

(All Min/Max characteristics and specifications are guaranteed over the Specified Operating Conditions. Typical performance characteristics and specifications are derived from measurements taken at nominal supply voltages and $T_A = 25^\circ\text{C}$.)

SPECIFIED OPERATING CONDITIONS (AGND = 0 V; all voltages with respect to ground.)

4. TYPICAL CONNECTION DIAGRAM

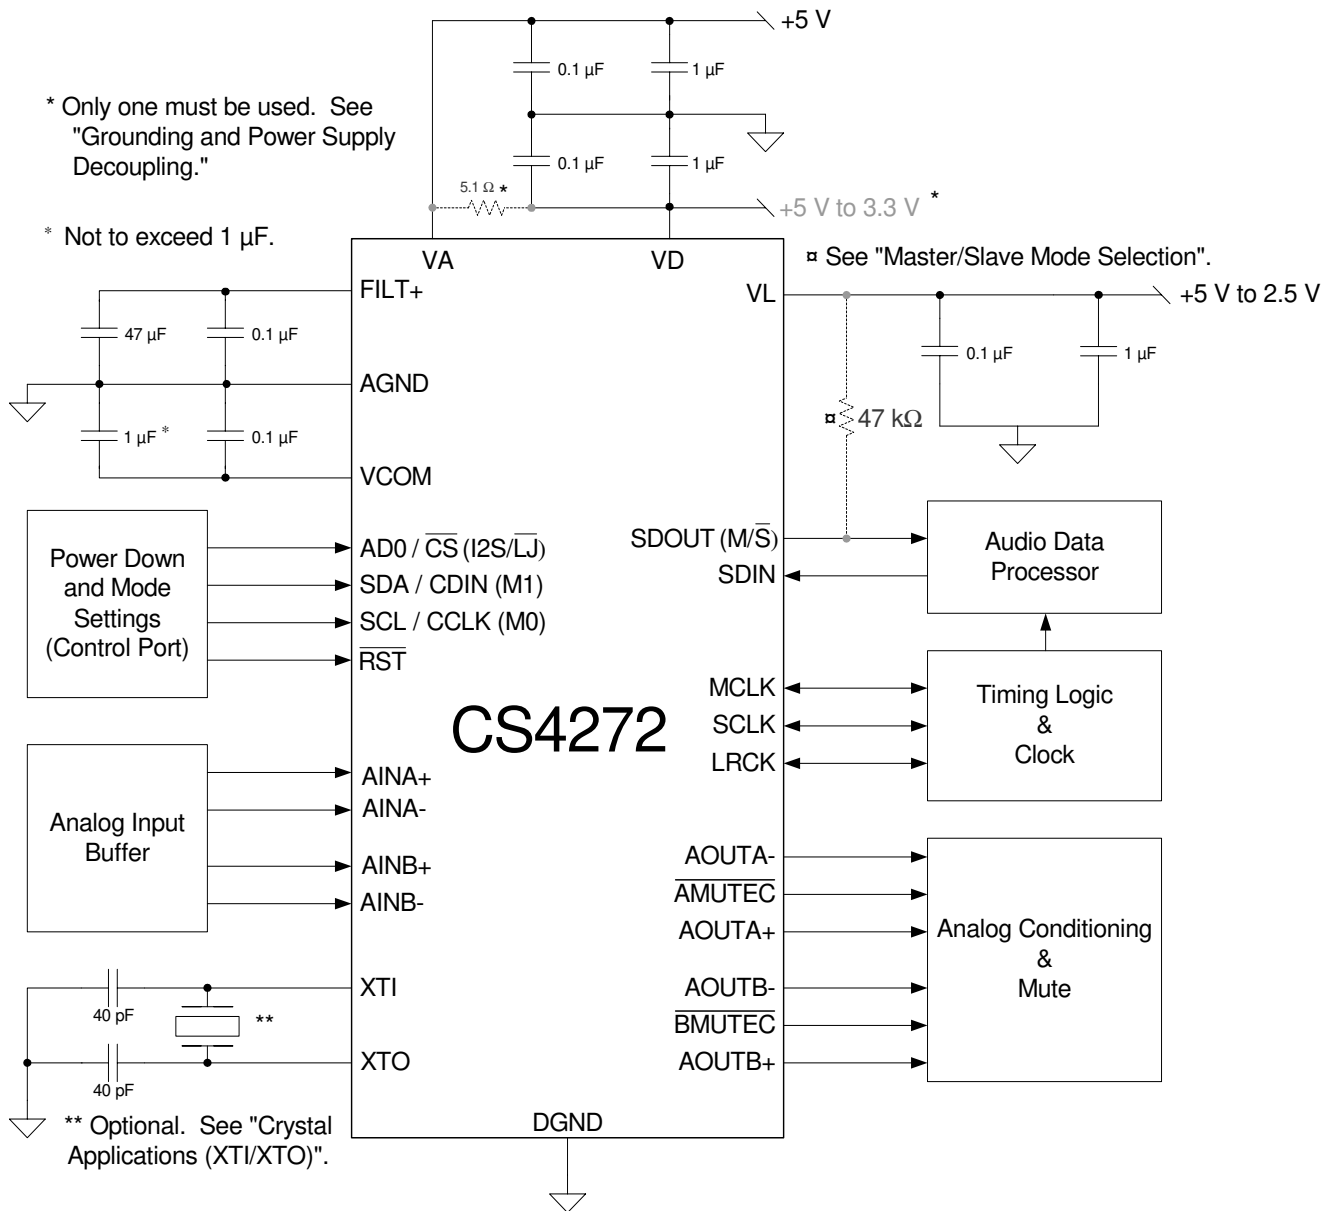

Figure 8. CS4272 Typical Connection Diagram

5. APPLICATIONS

5.1 Stand-Alone Mode

5.1.1 Recommended Power-Up Sequence

- 1) When using the CS4272 with an external MCLK, hold $\overline{\text{RST}}$ low until the power supply, MCLK, and LRCK are stable. When using the CS4272 with internally generated MCLK, hold $\overline{\text{RST}}$ low until the power supply is stable.
- 2) Bring $\overline{\text{RST}}$ high. If the internally generated MCLK is being used, it will appear on the MCLK pin prior to 1 ms from the release of $\overline{\text{RST}}$.

5.1.2 Master/Slave Mode

The CS4272 supports operation in either Master Mode or Slave Mode.

In Master Mode, LRCK and SCLK are outputs and are synchronously generated on-chip. LRCK is equal to F_s and SCLK is equal to $64 \times F_s$.

In Slave Mode, LRCK and SCLK are inputs, requiring external generation that is synchronous to MCLK. It is recommended that SCLK be $64 \times F_s$ to maximize system performance.

In Stand-Alone Mode, the CS4272 will default to Slave Mode. Master Mode may be accessed by placing a 47 k Ω pull-up to VL on the SDO $\overline{\text{S}}$ (M/S) pin.

Configuration of clock ratios in each of these modes will be outlined in the Tables 3 and 4.

5.1.3 System Clocking

The CS4272 will operate at sampling frequencies from 4 kHz to 200 kHz. This range is divided into three speed modes as shown in Table 1 below.

Table 1. Speed Modes

Mode	Sampling Frequency
<i>Single Speed</i>	4-50 kHz
<i>Double Speed</i>	50-100 kHz
<i>Quad Speed</i>	100-200 kHz

5.1.3.1 Crystal Applications (XTI/XTO)

An external crystal may be used in conjunction with the CS4272 to generate the master clock signal. To accomplish this, a 20 pF fundamental mode parallel resonant crystal must be connected between the XTI and XTO pins as shown in the Typical Connection Diagram on page 23. This crystal must oscillate at the frequency shown in Table 2. In this configuration, MCLK is a buffered output and, as shown in the Typical Connection Diagram, nothing other than the crystal and its load capacitors should be connected to XTI and XTO. The MCLK signal will appear on the MCLK pin prior to 1 ms from the release of $\overline{\text{RST}}$.

Table 2. Crystal Frequencies

Mode	Crystal Frequency
<i>Single Speed</i>	$512 \times F_s$
<i>Double Speed</i>	$256 \times F_s$
<i>Quad Speed</i>	$128 \times F_s$

To operate the CS4272 with an externally generated MCLK signal, no crystal should be used, XTI should be connected to ground and XTO should be left unconnected. In this configuration, MCLK is an input and must be driven externally with an appropriate speed clock.

5.1.3.2 Clock Ratio Selection

Depending on the use of an external crystal, or whether the CS4272 is in Master or Slave Mode, different MCLK/LRCK and SCLK/LRCK ratios may be used. These ratios are shown in the Tables 3 and 4 below.

Table 3. Clock Ratios - Stand Alone Mode With External Crystal
