

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

CSPEMI204

EMI Filter with ESD Protection

Product Description

The CSPEMI204 is an L–R–C EMI filter array with ESD protection that integrates two Pi–filters (C–L–R–C) to suppress EMI/RFI Noise. CSPEMI204 includes ESD protection diodes on all input/output pins, and provides a very high level of protection for sensitive electronic components against possible electrostatic discharge (ESD). The ESD diodes connected to the filter ports safely dissipate ESD strikes of ± 30 kV, which is beyond the maximum requirement of the IEC61000–4–2 international standard.

Features

- Two Channels of EMI Filtering
- ± 30 kV ESD Protection (IEC 61000–4–2, Contact Discharge)
- ± 30 kV ESD Protection (IEC 61000–4–2, Air Discharge)
- Greater than 45 dB of Attenuation at 900 MHz
- These Devices are Pb–Free, Halogen Free/BFR Free and are RoHS Compliant

Applications

- Mobile Phones

MAXIMUM RATINGS ($T_A = 25^\circ\text{C}$)

Rating	Symbol	Value	Unit
ESD Discharge IEC61000–4–2 Contact Discharge Air Discharge	V_{pp}	30 30	kV
RMS Current per Line	I_{Line}	350	mA
Operating Temperature Range	T_J	–40 to +125	$^\circ\text{C}$
Storage Temperature Range	T_{stg}	–55 to +150	$^\circ\text{C}$
Lead Solder Temperature (10 second duration)	T_L	260	$^\circ\text{C}$

Stresses exceeding those listed in the Maximum Ratings table may damage the device. If any of these limits are exceeded, device functionality should not be assumed, damage may occur and reliability may be affected.

Table 2. ELECTRICAL OPERATING CHARACTERISTICS ($T_A = 25^\circ\text{C}$ unless otherwise noted)

Symbol	Parameter	Test Conditions	Min	Typ	Max	Unit
V_{RWM}	Working Voltage			3.0		V
V_{BR}	Breakdown Voltage	$I_T = 1 \text{ mA}$; (Note 4)	6.0			V
I_{LEAK}	Channel Leakage Current	$V_{IN} = 3.0 \text{ V}$, $GND = 0 \text{ V}$			400	nA
R_{CH}	Channel Resistance (Pins A1 – A3, C1 – C3)				3.0	Ω
C_t	Line Capacitance	$V_R = 0 \text{ V}$, $f = 1 \text{ MHz}$	185	250	315	pF
f_{3dB}	Cut-off Frequency	450 Ω Source and 10 k Ω Load Termination		2.0		MHz
f_{3dB}	Cut-off Frequency	50 Ω Termination		25		MHz
F_{atten}	Stop Band Attenuation	@ 700 MHz @ 900 MHz		40 47		dB
V_{ESD}	In-system ESD Withstand Voltage a) Contact discharge per IEC 61000-4-2 standard, Level 4 (External Pins) b) Contact discharge per IEC 61000-4-2 standard, Level 1 (Internal Pins)	(Notes 1 and 2)	± 30 ± 30			kV
V_{CL}	TLP Clamping Voltage	Forward $I_{PP} = 8 \text{ A}$ Forward $I_{PP} = 16 \text{ A}$ Forward $I_{PP} = \pm 8 \text{ A}$ Forward $I_{PP} = \pm 16 \text{ A}$		9.8 11.5 -9.7 -11.7		V

Product parametric performance is indicated in the Electrical Characteristics for the listed test conditions, unless otherwise noted. Product performance may not be indicated by the Electrical Characteristics if operated under different conditions.

- Standard IEC61000-4-2 with $C_{Discharge} = 150 \text{ pF}$, $R_{Discharge} = 330$, GND grounded.
- These measurements performed with no external capacitor.
- TVS devices are normally selected according to the working peak reverse voltage (V_{RWM}), which should be equal to or greater than the DC or continuous peak operating voltage level.
- V_{BR} is measured at pulse test current I_T .

IEC 61000-4-2 Spec.

Level	Test Voltage (kV)	First Peak Current (A)	Current at 30 ns (A)	Current at 60 ns (A)
1	2	7.5	4	2
2	4	15	8	4
3	6	22.5	12	6
4	8	30	16	8

Figure 4. IEC61000-4-2 Spec

Figure 5. Diagram of ESD Clamping Voltage Test Setup

The following is taken from Application Note AND8308/D – Interpretation of Datasheet Parameters for ESD Devices.

ESD Voltage Clamping

For sensitive circuit elements it is important to limit the voltage that an IC will be exposed to during an ESD event to as low a voltage as possible. The ESD clamping voltage is the voltage drop across the ESD protection diode during an ESD event per the IEC61000-4-2 waveform. Since the IEC61000-4-2 was written as a pass/fail spec for larger

systems such as cell phones or laptop computers it is not clearly defined in the spec how to specify a clamping voltage at the device level. ON Semiconductor has developed a way to examine the entire voltage waveform across the ESD protection diode over the time domain of an ESD pulse in the form of an oscilloscope screenshot, which can be found on the datasheets for all ESD protection diodes. For more information on how ON Semiconductor creates these screenshots and how to interpret them please refer to AND8307/D.

Figure 6. Positive TLP I-V Curve (Preliminary)

Figure 7. Negative TLP I-V Curve (Preliminary)

NOTE: TLP parameter: $Z_0 = 50 \Omega$, $t_p = 100 \text{ ns}$, $t_r = 300 \text{ ps}$, averaging window: $t_1 = 30 \text{ ns}$ to $t_2 = 60 \text{ ns}$. V_{IEC} is the equivalent voltage stress level calculated at the secondary peak of the IEC 61000-4-2 waveform at $t = 30 \text{ ns}$ with 2 A/kV . See TLP description below for more information.

Transmission Line Pulse (TLP) Measurement

Transmission Line Pulse (TLP) provides current versus voltage (I-V) curves in which each data point is obtained from a 100 ns long rectangular pulse from a charged transmission line. A simplified schematic of a typical TLP system is shown in Figure 8. TLP I-V curves of ESD protection devices accurately demonstrate the product’s ESD capability because the 10s of amps current levels and under 100 ns time scale match those of an ESD event. This is illustrated in Figure 9 where an 8 kV IEC 61000-4-2 current waveform is compared with TLP current pulses at 8 A and 16 A. A TLP I-V curve shows the voltage at which the device turns on as well as how well the device clamps voltage over a range of current levels.
