

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts,Customers Priority,Honest Operation,and Considerate Service",our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

CTS100LVEL33

LVPECL Divide by 4 Divider

MLP8, MSOP8, SOIC8

Not recommended for new designs

FEATURES

- 5.0+ GHz Toggle Frequency
- 470ps Propagation Delay
- Internal Input Pull-down Resistors
- 3.0V to 5.5V Power Supply
- RoHS Compliant Pb Free Packages

BLOCK DIAGRAM

DESCRIPTION

The CTS100LVEL33 is an integrated ÷4 divider. The reset pin is asynchronous and is asserted on the rising edge. Upon power-up, the internal flip-flop will attain a random logic state; the reset allows for the synchronization of multiple CTS100LVEL33's in a system.

The CTS100LVEL33 is a direct replacement for the On Semiconductor MC100EL/LVEL33.

ENGINEERING NOTES

The CTS100LVEL33 provides a V_{BB} output for single-ended use or a DC bias reference for AC coupling to the device. For single-ended input applications, the V_{BB} reference should be connected to one side of the CLK/ \overline{CLK} differential input pair. The input signal is then fed to the other CLK/ \overline{CLK} input. The V_{BB} pin should be used only as a bias for the CTS100LVEL32 as its sink/source capability is limited. When used, the V_{BB} pin should be bypassed to ground via a 0.01 μ F capacitor.
