

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

CTSLV399

LVPECL/LVDS Oscillator Gain Stage & Buffer with Selectable Enable

MLP8, MSOP8

Not recommended for new designs

FEATURES

- Minimizes External Components
- Selectable Enable Polarity and Threshold (CMOS or PECL)
- 3V to 5.5V Power Supply
- Similar Operation as CTS100LVEL16VT Except with LVDS Outputs

BLOCK DIAGRAM

DESCRIPTION

The CTSLV399 is a specialized oscillator gain stage with an LVDS output buffer including an enable. The selectable enable input allows continuous oscillator operation by only controlling the Q_{HG} / Q_{HG} outputs.

The CTSLV399 provides adjustable internal pull-down current sources for the Q/Q outputs. Internal input biasing further reduces the number of needed external components

ENGINEERING NOTES

The CTSLV399 is a specialized oscillator gain stage with LVDS output buffer including an enable. The enable input (EN) allows continuous oscillator operation by only controlling the Q_{HG} / Q_{HG} outputs. The CTSLV399 also provides a V_{BB} and 470Ω internal bias resistors from D to V_{BB} and D-bar to V_{BB}. The V_{BB} pin can support 1.5 mA sink/source current. Bypassing V_{BB} to ground with a 0.01 μF capacitor is recommended.

Functionality MLP8 Package (CTSLV399NG)

The MLP8, NG options of the CTSLV399, provide a PECL/ECL level enable input (EN-bar). When the EN-bar input is LOW, the Q and Q_{HG} / Q_{HG} outputs pass data from the inputs. When EN-bar is HIGH, the Q output continues to pass data while the Q_{HG} output is forced high and the Q_{HG} output is forced low.

Only the Q-bar output operates with a current source (4 mA) to V_{EE}. This is accomplished by internal bonding of CS-SEL. An external resistor may also be used to increase pull-down current to a maximum of 25mA (includes 4mA on-chip current source).

The CTSLV399NB and CTSLV399ND versions operate with a single ended data input (D). The D-bar input is internally bonded directly to the V_{BB} pin bypassing the 470Ω bias resistor.

Functionality MLP8 Package (CTSLV399N) & MSOP8 Package (CTSLV399T)

The MSOP8 (T) and MLP8 (N) versions of the CTSLV399 provide a CMOS/TTL level enable input (EN). When the EN input is HIGH, the Q and Q_{HG} / Q_{HG} outputs pass data from the inputs. When EN is LOW, the Q output continues to pass data while the Q_{HG} output is forced high and the Q_{HG} output is forced low.

Only the Q-bar output operates with a current source (4 mA) to V_{EE}. This is accomplished by internal bonding of CS-SEL. An external resistor may also be used to increase pull-down current to a maximum of 25mA (includes 4mA on-chip current source).

The MSOP8 (T) and MLP8 (N) CTSLV399 operates with a single ended data input (D). The D-bar input is internally bonded directly to the V_{RR} pin bypassing the 470Ω bias resistor.

Enable Truth Table

EN-SEL	EN/ $\overline{\text{EN}}$	Q/ $\overline{\text{Q}}$	Q _{HG}	$\overline{\text{Q}}_{\text{HG}}$
NC	PECL Low, V _{EE} or NC	Data	Data	Data
	PECL High or V _{CC}	Data	High	Low
V _{EE} ¹	CMOS/TTL Low, V _{EE} or NC	Data	High	Low
	CMOS/TTL High or V _{CC} ²	Data	Data	Data

- 1 EN-SEL connections must be less than 1Ω.
- 2 An external ≤ 20kΩ pull-up resistor between EN and V_{CC} ensures a High when the EN pin is not driven.

Timing Diagram

Current Source Truth Table

CS-SEL	Q	$\overline{\text{Q}}$
NC	4mA typ	4mA typ
V _{EE} ¹	8mA typ	8mA typ
V _{CC} ¹	0	4mA typ

¹ Connection must be less than 1Ω.

Application Circuit for CMOS inputs

Recommended Component Values for CMOS Single Ended Inputs

Input Type	R1 ¹ Value	
	AC Coupled (C2 in circuit)	DC Coupled (C2 shorted)
3.3 V CMOS	1.1 kΩ	2.0 kΩ
5.0 V CMOS	1.6 kΩ	3.3 kΩ

R1 should be chosen so that the input swing on the D input with respect to \bar{D} is in the range of ± 80 to ± 1000 mV, per the AC Characteristics table and the D input is $< \pm 750$ mV with respect to V_{BB} .

CTSLV399

LVPECL/LVDS Oscillator Gain Stage & Buffer with Selectable Enable

MLP8, MSOP8

Not recommended for new designs

Δ V _{OC}	Change in Common Mode Voltage ³	-50	50	-50	50	-50	50	-50	50	mV
V _{OUT}	Single-Ended Output Swing	250	450	250	450	250	450	250	450	mV
V _{DIFF_OUT}	Differential Output Swing	500	900	500	900	500	900	500	900	mV

- 1 Specified with 100Ω resistor connecting Q_{HG} and \bar{Q} _{HG} together.
- 2 Common mode voltage is the center voltage between Q_{HG} and \bar{Q} _{HG} during a steady state.
- 3 Change in common mode voltage is the difference between common mode voltages at opposite binary states.

AC Characteristics ($V_{EE} = -3.0V$ to $-5.5V$; $V_{CC}=GND$ or $V_{EE}=GND$; $V_{CC} = +3.0V$ to $+5.5V$)

Symbol	Characteristic	-40°C			0°C			25°C			85°C			Unit
		Min	Typ	Max	Min	Typ	Max	Min	Typ	Max	Min	Typ	Max	
t_{PLH}/t_{PHL}	Propagation Delay													
	D to Q/\bar{Q} ¹			400			400			400			430	ps
	D to Q_{HG}/\bar{Q}_{HG} ²			550			550			550			630	ps
t_{SKEW}	Duty Cycle Skew ³		5	20		5	20		5	20		5	20	ps
V_{PP} (AC)	Input Swing ⁴	80		1000	80		1000	80		1000	80		1000	mV
t_r/t_f	Output Rise/Fall ¹ (20% - 80%) - Q	100		260	100		260	100		260	100		260	
	Output Rise/Fall ¹ (20% - 80%) - Q_{HG}	180		280	180		280	180		280	180		280	ps

¹ Specified with CS-SEL connected to V_{EE} and Q/\bar{Q} with AC coupled 50Ω loads.

² Specified with 100Ω resistor connecting Q_{HG} and \bar{Q}_{HG} together.

³ Duty cycle skew is the difference between a t_{PLH} and t_{PHL} propagation delay through a device.

⁴ The peak-to-peak differential input swing is the range for which AC parameters guaranteed. V_D and V must remain within the range of ± 750 mV with respect to V_{BB} .
