

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

CXL-GP Series

GENERAL PURPOSE ACCELEROMETER

- High Performance, 1-Axis and 3-Axis Accelerometers
- Small, Low-Cost
- Reliable Packaging with Screw-Down Mounting
- Factory Calibrated

Applications

- Automotive Testing
- Instrumentation
- Equipment Monitoring

Standard Package Dimensions

GP Series

The GP Series accelerometers are low cost, general purpose, linear acceleration and/or vibration sensors available in ranges of $\pm 4g$, $\pm 10g$, and $\pm 25g$.

Common applications are automotive testing, instrumentation, and equipment monitoring. The GP Series sensing element is a silicon micro-machined capacitive beam. The capacitive beam is held in force balance for full scale non-linearity of less than 0.2%.

The GP Series offers wide dynamic range, has excellent frequency response, operates on a single 4.9 to 5.5 VDC power supply, and is easy to interface to standard data acquisition systems. The 3-axis version (GP3) can be specified with an internal regulator (-R option) for use with a 5.5 to 36 V unregulated power supply.

The GP Series sensors provide a direct high-level analog voltage output. The output requires no external signal conditioning electronics and may be directly interfaced to an A/D or other data acquisition hardware.

Compared to traditional piezoelectric and piezoresistive accelerometer technologies, the silicon micromachined sensors offer equivalent performance at a significantly lower cost.

The GP Series is offered with a standard 5-pin female connector. The highly flexible, low-mass cable prevents disruption of the measurement.

Specifications	CXL04GP1 CXL04GP1Z CXL04GP3	CXL10GP1 CXL10GP1Z CXL10GP3	CXL25GP1 CXL25GP1Z CXL25GP3	Remarks
Performance

Notes

¹ -3dB, DC coupled sensor

Non-linearity is the deviation from a best fit straight line at full scale. Transverse sensitivity is error measured in the primary axis output created by forces induced in the orthogonal axis. Transverse sensitivity error is primarily due to the effects of misalignment. Zero g drift is specified as the typical change in 0 g level from its initial value at +25°C to its worst case value at Tmin or Tmax. Specifications subject to change without notice.

Ordering Information
