

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts,Customers Priority,Honest Operation,and Considerate Service",our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

Field and Factory Programmable Spread Spectrum Clock Generator for EMI Reduction

Features

- Wide Operating Output (SSCLK) Frequency Range
 - 3 MHz to 200 MHz
- Programmable Spread Spectrum with nominal 31.5 kHz Modulation Frequency
 - Center Spread: $\pm 0.25\%$ to $\pm 2.5\%$
 - Down Spread: -0.5% to -5.0%
- Input frequency range
 - External Crystal: 8 to 30 MHz Fundamental Crystals
 - External Reference: 8 to 166 MHz Clock
- Integrated Phase-Locked Loop (PLL)
- Field Programmable devices available
- Programmable Crystal Load Capacitor Tuning Array
- Low Cycle-to-cycle Jitter
- Spread Spectrum on/off function
- Powerdown or Output Enable function
- Commercial and Industrial temperature ranges
- 3.3 V operation
- 8-pin TSSOP and SOIC packages

Functional Description

The CY25100 is a Spread Spectrum Clock Generator (SSCG) IC used to reduce EMI found in today's high speed digital electronic systems.

The device uses a Cypress proprietary PLL and Spread Spectrum Clock (SSC) technology to synthesize and modulate the frequency of the input clock. By frequency modulating the clock, the measured EMI at the fundamental and harmonic frequencies are greatly reduced. This reduction in radiated energy can significantly reduce the cost of complying with regulatory agency (EMC) requirements and improve time-to-market without degrading system performance.

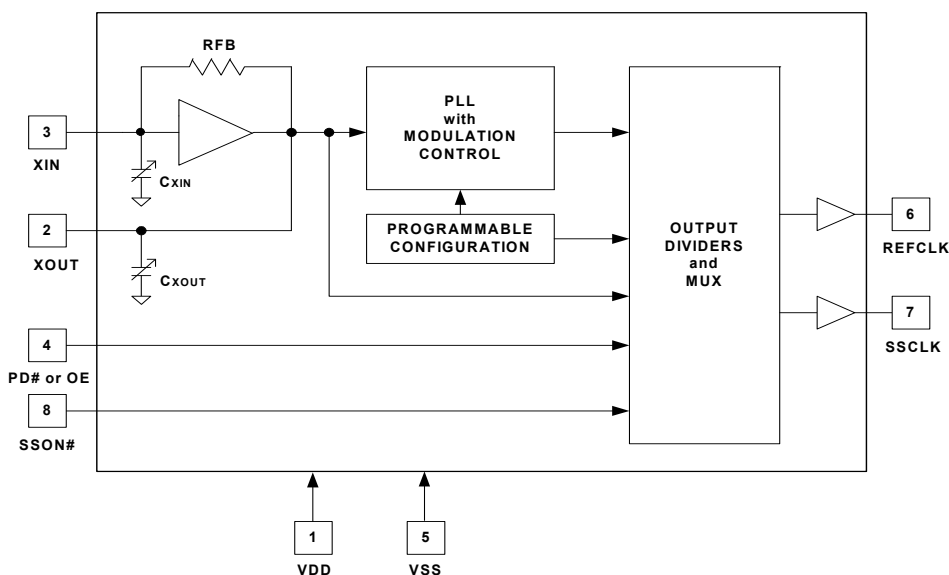

The CY25100 uses a factory or field-programmable configuration memory array to synthesize output frequency, spread percentage, crystal load capacitor, reference clock output on/off, spread spectrum on/off function, and PD#/OE options.

The spread percentage is programmed to either center spread or down spread with various spread percentages. The range for center spread is from $\pm 0.25\%$ to $\pm 2.50\%$. The range for down spread is from -0.5% to -5.0% .

The input to the CY25100 can either be a crystal or a clock signal. The CY25100 has two clock outputs: REFCLK and SSCLK. The non-spread spectrum REFCLK output has the same frequency as the input of the CY25100.

CY25100

Pin Description

Pin	Name	Type	Description
1	VDD	Power	3.3 V power supply.
2	XOUT	Output	Crystal output. Leave this pin floating if external clock is connected to pin 3.
3	XIN/CLKIN	Input	Crystal input or reference clock input.
4	PD#/OE	Input	User has the option of choosing either PD# or OE function. Power Down pin: Active LOW. If PD# = 0, PLL and crystal oscillator circuit are powered down, and outputs are weakly pulled low. Output Enable pin: Active HIGH. If OE = 1, SSCLK and REFCLK are enabled.
5	VSS	Power	Power supply ground.
6	REFCLK	Output	Buffered reference output.
7	SSCLK	Output	Spread spectrum clock output.
8	SSON#	Input	Spread spectrum control: Active LOW. 0 = spread on. 1 = spread off.

Programming Description

Field Programmable CY25100

The CY25100 is programmed at the package level, and must be programmed prior to installation on a circuit board. Field programmable devices are denoted by an “F” in the ordering code, and are blank when shipped. The CY25100 is Flash technology based, which allows it to be reprogrammed up to 100 times. This allows fast and easy design changes and product updates, and eliminates issues with old and out of date inventory.

Samples and small prototype quantities can be programmed on the CY3672 programmer with the CY3690 (TSSOP package) or CY3691 (SOIC package) socket adapter.

CY3672 Programmer and CY3690/CY3691 Socket Adapters

The Cypress CY3672 programmer and the CY3690 or CY3691 socket adapter may be used to program field programmable versions of the CY25100. The CY3690 enables users to program the CY25100ZXCF and CY25100ZXIF (TSSOP). CY3691 provides the ability to program the CY25100SXCF and CY25100SXIF (SOIC). The CY3690 and CY3691 are separate orderable items, so the existing users of the CY3672 programmer need to order only the specific socket adapter to program the CY25100.

Factory Programmable CY25100

Factory programming by Cypress is available for high volume orders. All requests must be submitted to the local Cypress Field Application Engineer (FAE) or sales representative. After the request is processed, you will receive a new part number, samples, and data sheet with the programmed values. This part number is used for additional sample requests and production orders.

Product Functions

Input Frequency (XIN, Pin 3 and XOUT, Pin 2)

The input to the CY25100 can be a crystal or a clock. The input frequency range for crystals is 8 to 30 MHz, and for clock signals is 8 to 166 MHz.

C_{XIN} and C_{XOUT} (Pin 3 and Pin 2)

The CY25100 has internal load capacitors at Pin 3 (C_{XIN}) and Pin 2 (C_{XOUT}). C_{XIN} always equals C_{XOUT}, and they are

programmable from 12 pF to 60 pF, in 0.5 pF increments. This feature eliminates the need for external crystal load capacitors.

The following formula is used to calculate the value of C_{XIN} and C_{XOUT} for matching the crystal load (C_L):

$$C_{XIN} = C_{XOUT} = 2C_L - C_P$$

where C_L is the crystal load capacitor as specified by the crystal manufacturer and C_P is the parasitic PCB capacitance on each node of the crystal.

For example, if a crystal with C_L of 16 pF is used, and C_P is 2 pF, C_{XIN} and C_{XOUT} are calculated as:

$$C_{XIN} = C_{XOUT} = (2 \times 16) - 2 = 30 \text{ pF}$$

If using a driven reference, set C_{XIN} and C_{XOUT} to the minimum value 12 pF, connect the reference to XIN/CLKIN, and leave XOUT unconnected.

Output Frequency (SSCLK, Pin 7)

The modulated frequency at the SSCLK output is produced by synthesizing the input reference clock. The modulation can be stopped by SSON# digital control input (SSON# = HIGH, no modulation). If modulation is stopped, the clock frequency is the nominal value of the synthesized frequency without modulation (spread percentage = 0). The range of synthesized clock is from 3 to 200 MHz.

Spread Percentage (SSCLK, Pin 7)

The SSCLK spread can be programmed at any percentage value from ±0.25% to ±2.5% for center spread and from -0.5% to -5.0% for down spread.

Reference Output (REFOUT, Pin 6)

The reference clock output has the same frequency and the same phase as the input clock. This output can be programmed to be enabled (clock on) or disabled (High Z, clock off). If this output is not required, it is recommended that the disabled (High Z, Clock Off) option be selected.

Modulation Frequency

The modulation frequency is 31.5 kHz for all SSCLK frequencies from 3 to 200 MHz.

Power Down or Output Enable (PD# or OE, Pin 4)

The part can be programmed to include either PD# or OE function. PD# function powers down the oscillator and PLL. The OE function disables the outputs.

Absolute Maximum Ratings

Supply Voltage (V_{DD})	-0.5 to +7.0 V	Junction Temperature	-40 °C to +125 °C
DC Input Voltage	-0.5 V to $V_{DD} + 0.5$ V	Data Retention at $T_j = 125$ °C	> 10 years
Storage Temperature (Non condensing)	-55 °C to +125 °C	Package Power Dissipation	350 mW
		Static Discharge Voltage (per MIL-STD-883, Method 3015)	≥ 2000 V

Recommended Crystal Specifications

Parameter	Description	Comments	Min	Typ	Max	Unit
f_{NOM}	Nominal Crystal Frequency	Parallel resonance, fundamental mode, AT cut	8	-	30	MHz
C_{LNOM}	Nominal Load Capacitance	Internal load caps	6	-	30	pF
R_1	Equivalent Series Resistance (ESR)	Fundamental mode	-	-	25	Ω
R_3/R_1	Ratio of Third Overtone Mode ESR to Fundamental Mode ESR	Ratio used because typical R_1 values are much less than the maximum spec	3	-	-	-
DL	Crystal Drive Level	No external series resistor assumed	-	0.5	2	mW

Operating Conditions

Parameter	Description	Min	Typ	Max	Unit
V_{DD}	Supply Voltage	3.13	3.30	3.45	V
T_A	Ambient Commercial Temperature	0	-	70	°C
	Ambient Industrial Temperature	-40	-	85	°C
C_{LOAD}	Maximum Load Capacitance at Pin 6 and Pin 7	-	-	15	pF
f_{REF}	External Reference Crystal (Fundamental tuned crystals only)	8	-	30	MHz
	External Reference Clock	8	-	166	MHz
f_{SSCLK}	SSCLK Output Frequency, $C_{LOAD} = 15$ pF	3	-	200	MHz
f_{REFCLK}	REFCLK Output Frequency, $C_{LOAD} = 15$ pF	8	-	166	MHz
f_{MOD}	Spread Spectrum Modulation Frequency	30.0	31.5	33.0	kHz
t_{PU}	Power Up Time for all V_{DD} 's to reach minimum specified voltage (power ramp must be monotonic)	0.05	-	500	ms

DC Electrical Characteristics

Parameter	Description	Condition	Min	Typ	Max	Unit
I_{OH}	Output High Current	$V_{OH} = V_{DD} - 0.5\text{ V}$, $V_{DD} = 3.3\text{ V}$ (source)	10	12	–	mA
I_{OL}	Output Low Current	$V_{OL} = 0.5\text{ V}$, $V_{DD} = 3.3\text{ V}$ (sink)	10	12	–	mA
V_{IH}	Input High Voltage	CMOS levels, 70% of V_{DD}	$0.7 \times V_{DD}$	–	V_{DD}	V
V_{IL}	Input Low Voltage	CMOS levels, 30% of V_{DD}	–	–	$0.3 \times V_{DD}$	V
I_{IH}	Input High Current, PD#/OE and SSON# Pins	$V_{in} = V_{DD}$	–10	–	10	μA
I_{IL}	Input Low Current, PD#/OE and SSON# Pins	$V_{in} = V_{SS}$	–10	–	10	μA
I_{OZ}	Output Leakage Current	Three-state output, PD#/OE = 0, output pulldown resistor disabled	–10	–	10	μA
C_{XIN} or C_{XOUT} ^[1]	Programmable Capacitance at Pin 2 and Pin 3	Capacitance at minimum setting	–	12	–	pF
		Capacitance at maximum setting	–	60	–	pF
C_{IN} ^[1]	Input Capacitance at Pin 4 and Pin 8	Input pins excluding XIN and XOUT	–	5	7	pF
I_{VDD}	Supply Current	$V_{DD} = 3.45\text{ V}$, $F_{in} = 30\text{ MHz}$, $REFCLK = 30\text{ MHz}$, $SSCLK = 66\text{ MHz}$, $C_{LOAD} = 15\text{ pF}$, PD#/OE = SSON# = V_{DD}	–	25	35	mA
I_{DDS}	Standby Current	$V_{DD} = 3.45\text{ V}$, Device powered down with PD# = 0 V (driven reference pulled down)	–	15	30	μA

Thermal Resistance

Parameter ^[2]	Description	Test Conditions	8-pin SOIC	8-pin TSSOP	Unit
θ_{JA}	Thermal resistance (junction to ambient)	Test conditions follow standard test methods and procedures for measuring thermal impedance, in accordance with EIA/JESD51.	134	161	$^{\circ}\text{C/W}$
θ_{JC}	Thermal resistance (junction to case)		49	31	$^{\circ}\text{C/W}$

Notes

1. Guaranteed by characterization, not 100% tested.
2. These parameters are guaranteed by design and are not tested.

AC Electrical Characteristics

The AC Electrical Characteristics for part CY25100 is as follows. [3]

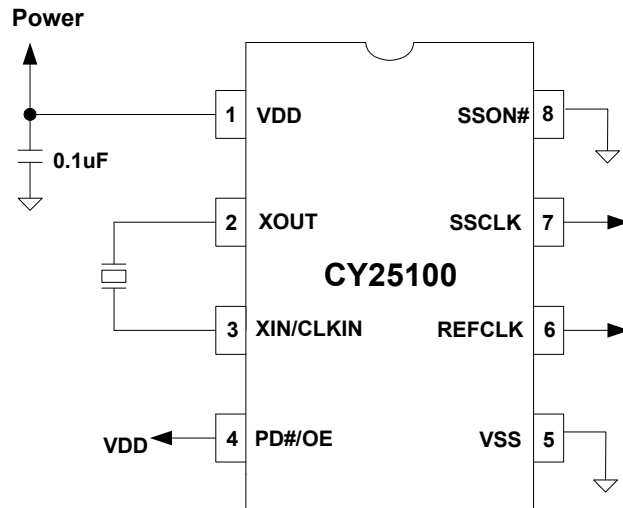

Parameter	Description	Condition	Min	Typ	Max	Unit
DC	Output Duty Cycle	SSCLK, Measured at $V_{DD}/2$	45	50	55	%
	Output Duty Cycle	REFCLK, Measured at $V_{DD}/2$, Duty Cycle of CLKIN = 50% at input bias	40	50	60	%
SR1	Rising Edge Slew Rate	SSCLK from 3 to 100 MHz; REFCLK from 3 to 100 MHz; 20%–80% of V_{DD}	0.7	1.1	3.6	V/ns
SR2	Falling Edge Slew Rate	SSCLK from 3 to 100 MHz; REFCLK from 3 to 100 MHz; 80%–20% of V_{DD}	0.7	1.1	3.6	V/ns
SR3	Rising Edge Slew Rate	SSCLK from 100 to 200 MHz; REFCLK from 100 to 166 MHz; 20%–80% of V_{DD}	1.0	1.6	4.0	V/ns
SR4	Falling Edge Slew Rate	SSCLK from 100 to 200 MHz; REFCLK from 100 to 166 MHz; 80%–20% of V_{DD}	1.2	1.6	4.0	V/ns
$t_{CCJ1}^{[4]}$	Cycle-to-Cycle Jitter, SSCLK (Pin 7)	CLKIN = SSCLK = 166 MHz, 2% spread, REFCLK off	–	90	120	ps
		CLKIN = SSCLK = 66 MHz, 2% spread, REFCLK off	–	100	130	ps
		CLKIN = SSCLK = 33 MHz, 2% spread, REFCLK off	–	130	170	ps
$t_{CCJ2}^{[4]}$	Cycle-to-Cycle Jitter, SSCLK (Pin 7)	CLKIN = SSCLK = 166 MHz, 2% spread, REFCLK on	–	100	130	ps
		CLKIN = SSCLK = 66 MHz, 2% spread, REFCLK on	–	105	140	ps
		CLKIN = SSCLK = 33 MHz, 2% spread, REFCLK on	–	200	260	ps
$t_{CCJ3}^{[4]}$	Cycle-to-Cycle Jitter, REFCLK (Pin 6)	CLKIN = SSCLK = 166 MHz, 2% spread, REFCLK on	–	80	100	ps
		CLKIN = SSCLK = 66 MHz, 2% spread, REFCLK on	–	100	130	ps
		CLKIN = SSCLK = 33 MHz, 2% spread, REFCLK on	–	135	180	ps
t_{STP}	Power down Time (pin 4 = PD#)	Time from falling edge on PD# to stopped outputs (Asynchronous)	–	150	350	ns
t_{OE1}	Output Disable Time (pin 4 = OE)	Time from falling edge on OE to stopped outputs (Asynchronous)	–	150	350	ns
t_{OE2}	Output Enable Time (pin 4 = OE)	Time from rising edge on OE to outputs at a valid frequency (Asynchronous)	–	150	350	ns
t_{PU1}	Power Up Time, Crystal is used	Time from rising edge on PD# to outputs at valid frequency (Asynchronous)	–	3.5	5	ms
t_{PU2}	Power Up Time, Reference clock is used	Time from rising edge on PD# to outputs at valid frequency (Asynchronous), reference clock at correct frequency	–	2	3	ms

Notes

- Guaranteed by characterization, not 100% tested.
- Jitter is configuration dependent. Actual jitter is dependent on XIN jitter and edge rate, number of active outputs, output frequencies, spread percentage, temperature, and output load.

Application Circuit

Figure 2. Application Circuit Diagram [5, 6, 7]

Notes

5. Because the load capacitors (C_{XIN} and C_{XOUT}) are provided by the CY25100, no external capacitors are needed on the X_{IN} and X_{OUT} pins to match the crystal load capacitor (C_L). Only a single 0.1-µF bypass capacitor is required on the V_{DD} pin.
6. If an external clock is used, apply the clock to X_{IN} (pin 3) and leave X_{OUT} (pin 2) floating (unconnected).
7. If $SSON\#$ (pin 8) is LOW (V_{SS}), the frequency modulation is on at $SSCLK$ (pin 7).

Switching Waveforms

Figure 3. Duty Cycle Timing ($DC = t_{1A}/t_{1B}$)

Figure 4. Output Rise/Fall Time (SSCLK and REFCLK)

Output Rise time (T_r) = $(0.6 \times V_{DD})/SR1$ (or $SR3$)
 Output Fall time (T_f) = $(0.6 \times V_{DD})/SR2$ (or $SR4$)

Refer to AC Electrical Characteristics table for SR (Slew Rate) values.

Figure 5. Power Down and Power Up Timing

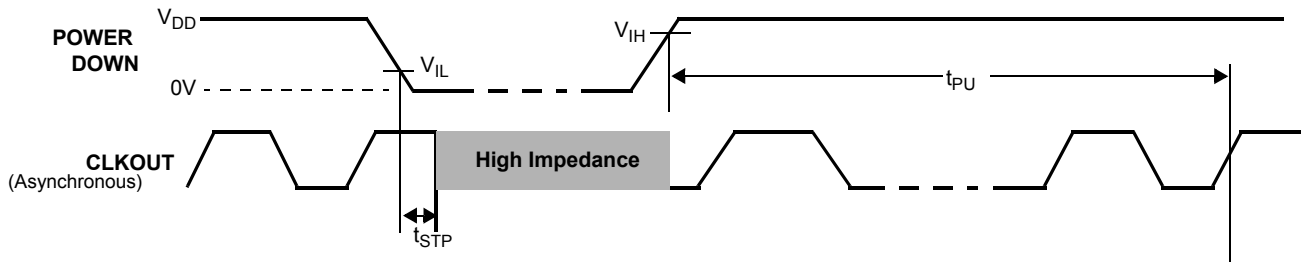

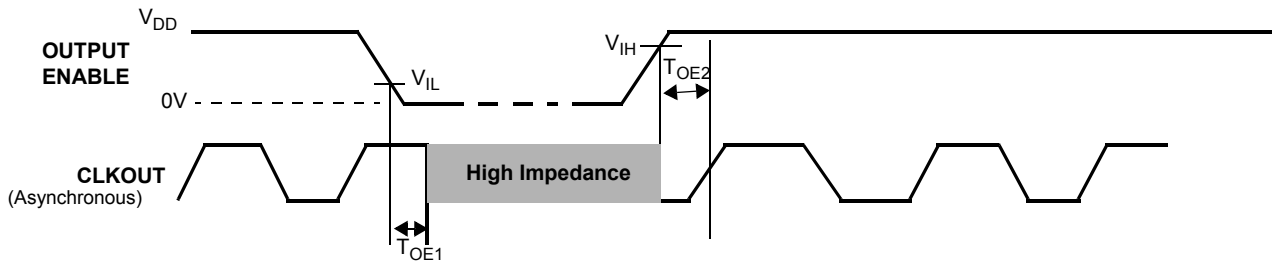

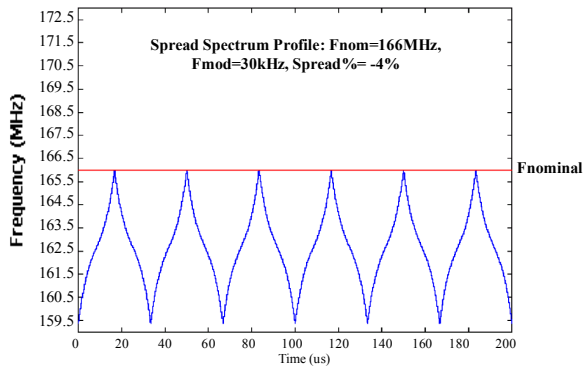

Figure 6. Output Enable/Disable Timing

Informational Graphs

The Informational Graphs are as follows. [8]

Note

8. The Informational Graphs are meant to convey the typical performance levels. No performance specifications is implied or guaranteed. Refer to [DC Electrical Characteristics on page 6](#) and [AC Electrical Characteristics on page 7](#) for device specifications.

Informational Graphs (continued)

The Informational Graphs are as follows. [8]

This document, including any software or firmware included or referenced in this document ("Software"), is owned by Cypress under the intellectual property laws and treaties of the United States and other countries worldwide. Cypress reserves all rights under such laws and treaties and does not, except as specifically stated in this paragraph, grant any license under its patents, copyrights, trademarks, or other intellectual property rights. If the Software is not accompanied by a license agreement and you do not otherwise have a written agreement with Cypress governing the use of the Software, then Cypress hereby grants you a personal, non-exclusive, nontransferable license (without the right to sublicense) (1) under its copyright rights in the Software (a) for Software provided in source code form, to modify and reproduce the Software solely for use with Cypress hardware products, only internally within your organization, and (b) to distribute the Software in binary code form externally to end users (either directly or indirectly through resellers and distributors), solely for use on Cypress hardware product units, and (2) under those claims of Cypress's patents that are infringed by the Software (as provided by Cypress, unmodified) to make, use, distribute, and import the Software solely for use with Cypress hardware products. Any other use, reproduction, modification, translation, or compilation of the Software is prohibited.

TO THE EXTENT PERMITTED BY APPLICABLE LAW, CYPRESS MAKES NO WARRANTY OF ANY KIND, EXPRESS OR IMPLIED, WITH REGARD TO THIS DOCUMENT OR ANY SOFTWARE OR ACCOMPANYING HARDWARE, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. To the extent permitted by applicable law, Cypress reserves the right to make changes to this document without further notice. Cypress does not assume any liability arising out of the application or use of any product or circuit described in this document. Any information provided in this document, including any sample design information or programming code, is provided only for reference purposes. It is the responsibility of the user of this document to properly design, program, and test the functionality and safety of any application made of this information and any resulting product. Cypress products are not designed, intended, or authorized for use as critical components in systems designed or intended for the operation of weapons, weapons systems, nuclear installations, life-support devices or systems, other medical devices or systems (including resuscitation equipment and surgical implants), pollution control or hazardous substances management, or other uses where the failure of the device or system could cause personal injury, death, or property damage ("Unintended Uses"). A critical component is any component of a device or system whose failure to perform can be reasonably expected to cause the failure of the device or system, or to affect its safety or effectiveness. Cypress is not liable, in whole or in part, and you shall and hereby do release Cypress from any claim, damage, or other liability arising from or related to all Unintended Uses of Cypress products. You shall indemnify and hold Cypress harmless from and against all claims, costs, damages, and other liabilities, including claims for personal injury or death, arising from or related to any Unintended Uses of Cypress products.
