

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

Safety Information

Regulatory Compliance

The CY8CKIT-146 PSoC 4200DS Prototyping Kit is intended for use as a development platform for hardware or software in a laboratory environment. The board is an open system design, which does not include a shielded enclosure. This may cause interference to other electrical or electronic devices in close proximity. In a domestic environment, this product may cause radio interference. In such cases, you may be required to take adequate preventive measures. In addition, this board should not be used near any medical equipment or RF devices.

Attaching additional wiring to this product or modifying the product operation from the factory default settings may affect its performance and cause interference with other apparatus in the immediate vicinity. If such interference is detected, suitable mitigating measures should be taken.

The PSoC 4200DS Prototyping Kit, as shipped from the factory, has been verified to meet with requirements of CE as a Class A product.

The PSoC 4200DS Prototyping Kit contains electrostatic discharge (ESD) sensitive devices. Electrostatic charges readily accumulate on the human body and any equipment, and can discharge without detection. Permanent damage may occur on devices subjected to high-energy discharges. Proper ESD precautions are recommended to avoid performance degradation or loss of functionality. Store unused PSoC 4200DS Prototyping Kit boards in the protective shipping package.

End-of-Life/Product Recycling

This kit has an end-of life five years from the date of manufacture mentioned on the back of the box. Contact your nearest recycler for discarding the kit.

General Safety Instructions

ESD Protection

ESD can damage boards and associated components. Cypress recommends that you perform procedures only at an ESD workstation. If such a workstation is not available, use appropriate ESD protection by wearing an antistatic wrist strap attached to the chassis ground (any unpainted metal surface) on your board when handling parts.

Handling Boards

PSoC 4200DS Prototyping boards are sensitive to ESD. Hold the board only by its edges. After removing the board from its box, place it on a grounded, static-free surface. Use a conductive foam pad if available. Do not slide board over any surface.

1. Introduction

Thank you for your interest in the CY8CKIT-146 PSoC 4200DS Prototyping Kit. The PSoC 4200DS prototyping kit is designed as an easy-to-use and inexpensive prototyping platform. The PSoC 4200DS Prototyping Kit supports the PSoC 4200DS device family, delivering a complete system solution for a wide range of embedded applications at a very low cost. The PSoC 4200DS device is a true programmable embedded system-on chip, integrating custom digital peripheral functions, memory, and an ARM® Cortex®-M0 microcontroller on a single chip. The programmable digital peripheral functions allow higher flexibility, in-field tuning of the design, and faster time-to-market.

The PSoC 4200DS Prototyping Kit offers an open footprint breakout board to maximize the end-utility of the PSoC 4200DS device. This kit provides a low-cost alternative to device samples while providing a platform to easily develop and integrate the PSoC 4200DS device into your end-system. In addition, the board includes the following features:

- An LED to provide feedback
- A push button to provide a simple user input
- 5V operation

The PSoC 4200DS prototyping kit also integrates the Cypress KitProg2 that enables on-board programming, debugging and bridging functionality, such as USB-UART and USB-I2C. The KitProg2 is used to program and debug the target PSoC 4200DS device (see [Figure 1-1](#)). The prototyping kit allows you to separate the KitProg2 board from the PSoC 4200DS target board.

1.1 Kit Contents

The PSoC 4200DS Prototyping Kit contains a PSoC 4200DS Prototyping board and Quick Start Guide.

Figure 1-1. CY8CKIT-146 PSoC 4200DS Prototyping Kit

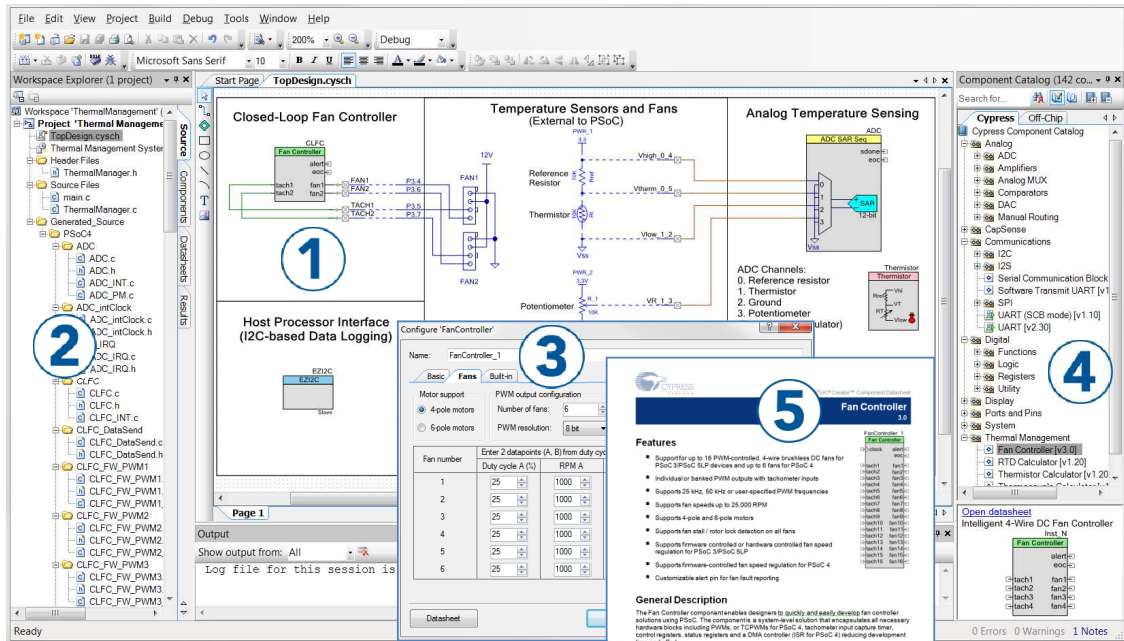

1.2 PSoC Creator

PSoC Creator™ is a state-of-the-art, easy-to-use integrated design environment (IDE). It introduces revolutionary hardware and software co-design, powered by a library of pre-verified and pre-characterized PSoC Components. With PSoC Creator, you can:

1. Drag and drop Components to build your hardware system design in the main design workspace
2. Codesign your application firmware with the PSoC hardware
3. Configure Components using configuration tools
4. Explore the library of 100+ Components
5. Review Component datasheets

Figure 1-2. PSoC Creator Features

PSoC Creator also enables you to tap into an entire tool ecosystem with integrated compiler chains and production programming programmers for PSoC devices.

For more information, visit www.cypress.com/psoccreator. Visit the [PSoC Creator Video Training Page](#) for video tutorials on learning and using PSoC Creator.

1.2.1 PSoC Creator Code Examples

PSoC Creator includes a large number of code examples. These examples are available from the PSoC Creator Start Page, as [Figure 1-3 on page 9](#) shows or from the menu under “**File > Code Example...**”.

Code examples can speed up your design process by starting you off with a complete design, instead of a blank page. The code examples also show how PSoC Creator Components can be used for various applications. Code examples and documentation are included, as shown in [Figure 1-4 on page 10](#).

In the **Find Example Project** dialog shown in [Figure 1-4](#), you have several options:

- Filter for examples based on architecture or device family, that is, PSoC 3, PSoC 4, or PSoC 5LP; project name; or keyword
- Select from the list of examples offered based on the **Filter Options**
- Review the example project’s description (on the **Documentation** tab)
- Review the code from the **Sample Code** tab. You can copy the code from this window and paste to your project, which can help speed up code development
- Create a new project (and a new workspace if needed) based on the selection. This can speed up your design process by starting you off with a complete, basic design. You can then adapt that design to your application.

Figure 1-3. Code Examples in PSoC Creator

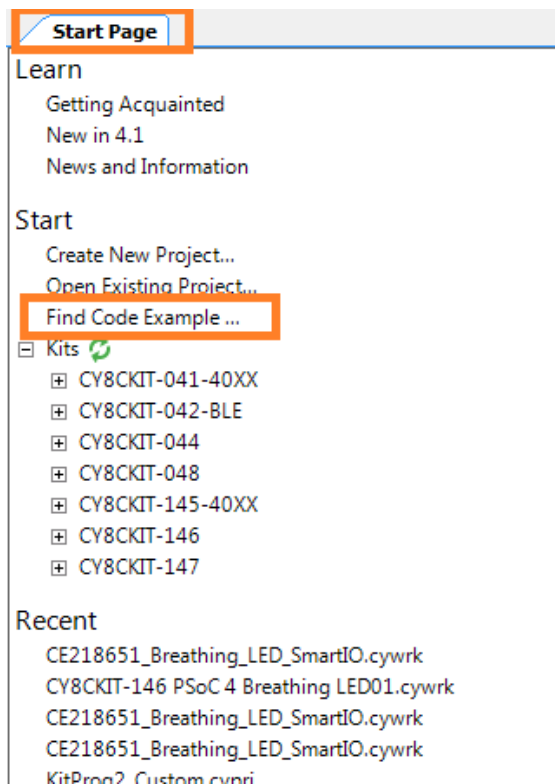

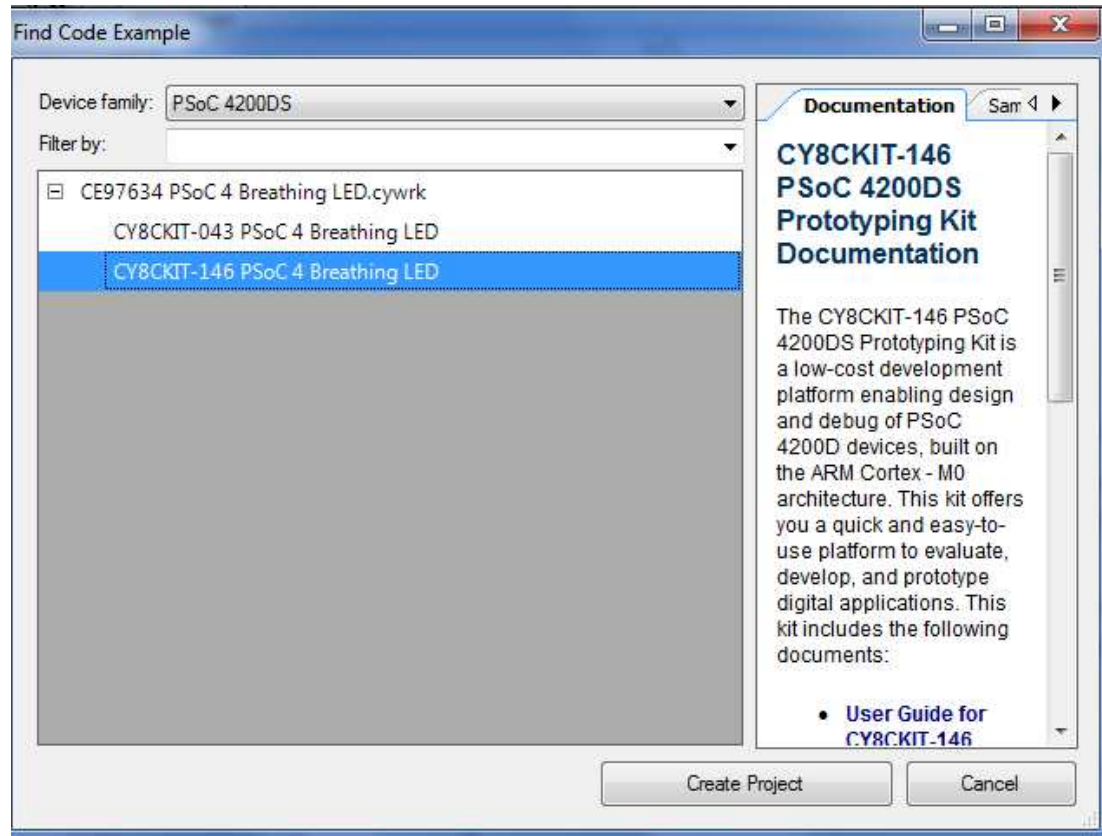

Figure 1-4. Code Example Projects with Sample Code

1.2.2 Kit Code Examples

You can access the installed kit code examples from the PSoC Creator Start Page. To access these examples, expand the **Kits**; then, expand the specific kit to see the code examples. Refer to the [Code Examples chapter on page 24](#) for a list of code examples that you can use on this kit.

1.2.3 PSoC Creator Help

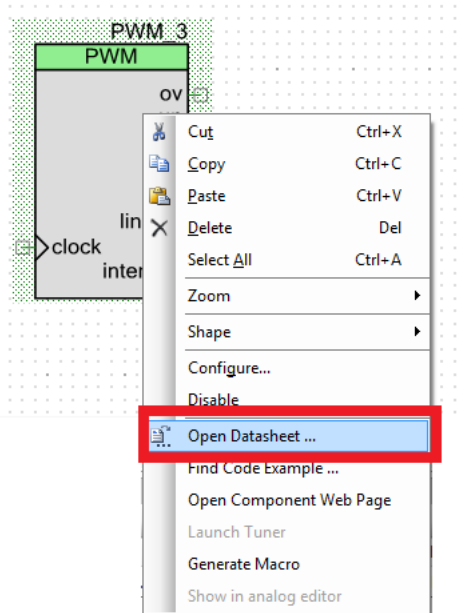

Launch PSoC Creator and navigate to the following items:

- **Quick Start Guide:** Choose **Help > Documentation > Quick Start Guide**. This guide gives you the basics for developing PSoC Creator projects.
- **Simple Component Code Examples:** Choose **File > Code Example**. These examples demonstrate how to configure and use PSoC Creator Components. To access examples related to a specific Component, right-click on the Component in the schematic or in the Component Catalog. Select the **Find Code Example** option in the context menu that appears.
- **System Reference Guide:** Choose **Help > System Reference Guides**. This guide lists and describes the system functions provided by PSoC Creator.

1.2.4 Component Datasheets

Right-click a Component and select **Open Datasheet** (see [Figure 1-5 on page 11](#)).

Figure 1-5. Opening Component Datasheet

1.3 Getting Started

This guide will help you get acquainted with the PSoC 4200DS Prototyping Kit:

- The [Software Installation chapter on page 15](#) describes the installation of the kit software. This includes installation of the PSoC Creator IDE for development and debugging the applications, and PSoC Programmer for programming hex files.
- The [Kit Operation chapter on page 18](#) describes the major features of the PSoC 4200DS Prototyping Kit and functionalities such as programming, debugging, and the USB-UART and USB-I2C bridges.
- The [Hardware chapter on page 23](#) details the hardware content of the kit and the hardware operation.
- The [Code Examples chapter on page 24](#) describes multiple code examples that will help you understand how to create your own PSoC 4200DS projects.
- The [Appendix chapter on page 31](#) provides schematics, details about programming the kit using Miniprogram, Kit Schematics, and the bill of materials (BOM).

1.4 Additional Learning Resources

Cypress provides a wealth of data at www.cypress.com to help you to select the right PSoC device for your design, and to help you to quickly and effectively integrate the device into your design. For a comprehensive list of resources, see [KBA86521](#), [How to Design with PSoC 3](#), [PSoC 4](#), and [PSoC 5LP](#). The following is an abbreviated list for PSoC 4:

- Overview: [PSoC Portfolio](#) and [PSoC Roadmap](#).
- Product Selectors: [PSoC 4 Product Selector](#). In addition, [PSoC Creator](#) includes a device selection tool.
- Datasheets: Describe and provide electrical specifications for the [PSoC 4000](#), [PSoC 4100](#), [PSoC 4200](#), [PSoC 4100M](#), [PSoC 4200M](#), [PSoC 4200L](#) and [PSoC 4000S](#) device families.
- [CapSense Design Guide](#): Learn how to design capacitive touch-sensing applications with the PSoC 4 family of devices.
- [Application Notes](#) and [Code Examples](#): Cover a broad range of topics, from basic to advanced. Many of the application notes include code examples. Visit the [PSoC 3/4/5 Code Examples](#) web page for a list of all available PSoC Creator code examples. To access code examples from within PSoC Creator - see [PSoC Creator Code Examples on page 10](#).
- [Technical Reference Manuals \(TRM\)](#): Provide detailed descriptions of the architecture and registers in each PSoC 4 device family.
- [Development Kits](#):
 - [CY8CKIT-041](#), [CY8CKIT-046](#), [CY8CKIT-044](#), [CY8CKIT-042](#), and [CY8CKIT-040](#) are easy-to-use and inexpensive development platforms. These kits include connectors for Arduino™ compatible shields and Digilent Pmod Peripheral Modules.
 - [CY8CKIT-043](#), [CY8CKIT-049](#), [CY8CKIT-145](#), and [CY8CKIT-146](#) are very low-cost prototyping platforms for sampling PSoC 4 devices.
 - [CY8CKIT-001](#) is a common development platform for all PSoC family devices.
 - The [MiniProg3](#) device provides an interface for flash programming and debug.
- [Knowledge Base Articles \(KBA\)](#): Provide design and application tips from experts on using the device.
- PSoC Creator Training: Visit www.cypress.com/go/creatorstart/creatortraining for a comprehensive list of video training on PSoC Creator.
- Learning from Peers: Visit www.cypress.com/forums to meet enthusiastic PSoC developers discussing the next-generation embedded systems on Cypress Developer Community Forums.

1.5 Technical Support

For assistance, visit [Cypress Support](#) or contact customer support at +1(800) 541-4736 Ext. 2 (in the USA) or +1 (408) 943-2600 Ext. 2 (International).

You can also use the following support resources if you need quick assistance:

- [Self-help \(Technical Documents\)](#)
- [Local Sales Office Locations](#)

1.6 Document Conventions

Table 1-1. Document Conventions for Guides

Convention	Usage
Courier New	Displays file locations, user entered text, and source code: C:\...cd\icc\
<i>Italics</i>	Displays file names and reference documentation: Read about the <i>sourcefile.hex</i> file in the <i>PSoC Creator User Guide</i> .
[Bracketed, Bold]	Displays keyboard commands in procedures: [Enter] or [Ctrl] [C]
File > Open	Represents menu paths: File > Open > New Project
Bold	Displays commands, menu paths, and icon names in procedures: Click the File icon and then click Open .
Times New Roman	Displays an equation: $2 + 2 = 4$
Text in gray boxes	Describes Cautions or unique functionality of the product.

1.7 Acronyms

Table 1-2. Acronyms Used in this Document

Acronym	Description
ADC	Analog-to-Digital Converter
BLE	Bluetooth Low Energy
BOM	Bill of Materials
CMOD	Modulator Capacitor
CMP	Comparator
CTANK	Shield tank capacitor
DAC	Digital to Analog Converter
DPDT	Double-Pole, Double-Throw
ESD	Electrostatic Discharge
GPIO	General Purpose Input/Output
I2C	Inter-Integrated Circuit
IDAC	Current DAC
IDE	Integrated Development Environment
LED	Light-Emitting Diode
PRoC	Programmable Radio-on-Chip
PSoC	Programmable Systems-on-Chip
SAR	Successive Approximation Register
SCB	Serial Communication Block
SRAM	Static Random Access Memory
SWD	Serial Wire Debug
TCPWM	Timer, Counter, Pulse Width Modulator
UART	Universal Asynchronous Receiver Transmitter
USB	Universal Serial Bus
WCO	Watch Crystal Oscillator

2. Software Installation

This chapter describes the steps to install the software tools and packages on a PC for using the PSoC 4200DS Prototyping Kit. This includes the IDE on which the projects will be built and used for programming.

2.1 Before You Begin

All Cypress software installations require administrator privileges, but these are not required to run the software after it is installed. Close any other Cypress software that is currently running before installing the kit software.

2.2 Install Software

Follow these steps to install the PSoC 4200DS Prototyping kit software:

1. Download the PSoC 4200DS Prototyping kit software from <http://www.cypress.com/CY8CKIT-146>. The kit software is available in three formats for download.
 - a. **CY8CKIT-146 Kit Only:** This executable file installs only the kit contents, which include kit code examples, hardware files, and user documents. This package can be used if all the software prerequisites (listed in step 5) are installed on your PC.
 - b. **CY8CKIT-146 Kit Setup:** This installation package contains the files related to the kit including PSoC Creator and PSoC Programmer. However, it does not include the Windows Installer or Microsoft .NET framework packages. If these packages are not on your computer, the installer directs you to download and install them from the Internet.
 - c. **CY8CKIT-146 DVD ISO:** This file is a complete package, stored in a DVD-ROM image format, that you can use to create a DVD or extract using an ISO extraction program such as WinZip or WinRAR. The file can also be mounted like a virtual CD/DVD using virtual drive programs such as Virtual CloneDrive and MagicISO. This file includes all the required software, utilities, drivers, hardware files, and user documents.
2. If you have downloaded the ISO file, mount it in a virtual drive. Extract the ISO contents if you do not have a virtual drive to mount. Double-click *cyautorun.exe* in the root directory of the extracted content or mounted ISO if "Autorun from CD/DVD" is not enabled on the PC. The installation window will appear automatically.

Note: If you are using the "Kit Setup" or "Kit Only" file, then go to step 4 for installation.

3. Click **Install CY8CKIT-146 Kit** to start the kit installation, as shown in [Figure 2-1](#).

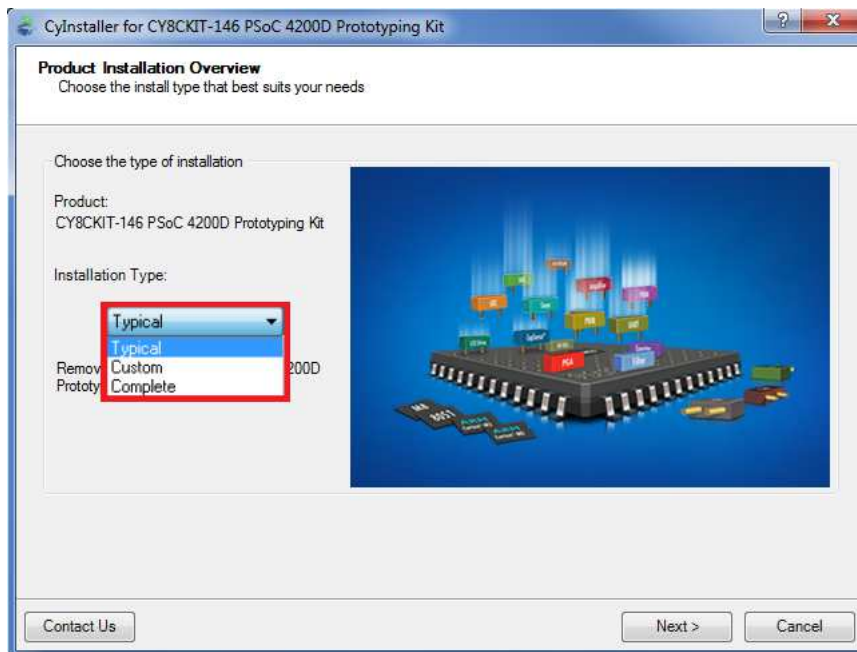

Figure 2-1. Kit Installer Screen

4. Select the directory in which you want to install the PSoC 4200DS Prototyping kit-related files. Choose the directory and click **Next**.
5. When you click **Next**, the PSoC 4200DS Prototyping kit installer automatically installs the required software, if it is not present on your computer. The following is the required software:
 - a. PSoC Creator 4.1 or later: This software is also available separate from the kit at www.cypress.com/psoccreator.
 - b. PSoC Programmer 3.26 or later: This is installed as part of PSoC Creator installation (www.cypress.com/programmer).

- Choose the **Typical/Custom/Complete** installation type in the Product Installation Overview window, as shown in [Figure 2-2](#). Click **Next** after you select the installation type.

Figure 2-2. Product Installation Overview

- Read the License agreement and select 'I accept the terms in the license agreement' to continue with installation. Click on **Next**.
- When the installation begins, a list of packages appears on the installation page. A green check mark appears next to each package after successful installation.
- Enter your contact information or select the check box **Continue Without Contact Information**. Click **Finish** to complete the PSoC 4200DS Prototyping kit installation.
- After the installation is complete, the kit contents are available at the following location:
`<Install_Directory>\CY8CKIT-146 PSoC 4200DS Prototyping Kit`

Default location:

Windows OS (64-bit):

`C:\Program Files (x86)\Cypress\CY8CKIT-146 PSoC 4200DS Prototyping Kit`

Windows OS (32-bit):

`C:\Program Files\Cypress\CY8CKIT-146 PSoC 4200DS Prototyping Kit`

Note: For Windows 7/8/8.1 users, the installed files and the folder are read-only. To use the installer code examples, follow the steps outlined in the [Code Examples on page 24](#) chapter.

2.3 Uninstall Software

The software can be uninstalled using one of the following methods:

- Go to **Start > All Programs > Cypress > Cypress Update Manager** and select the Uninstall button.
- Go to **Start > Control Panel > Programs and Features for Windows 7 or Add/Remove Programs for Windows XP**; select the **Uninstall/Change** button.

3. Kit Operation

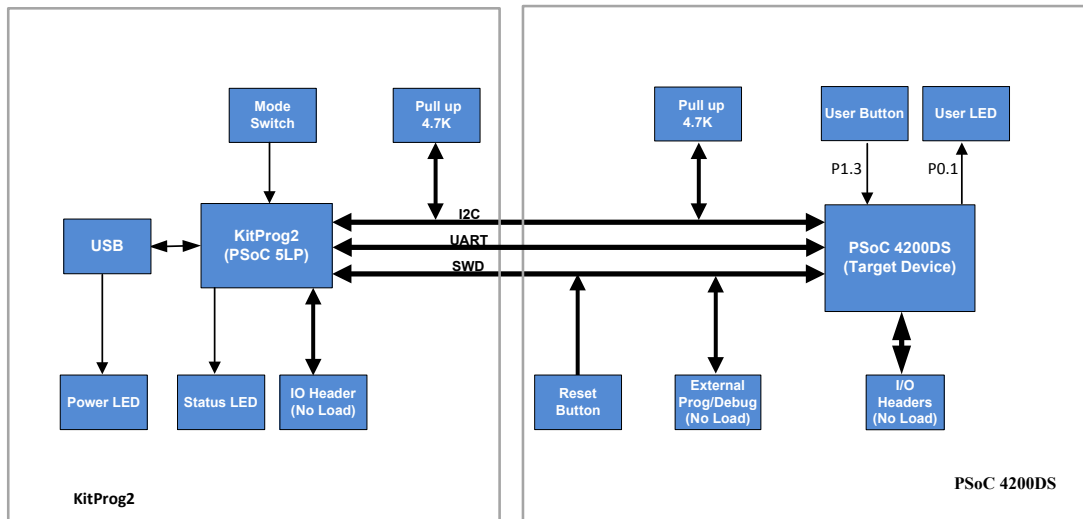

This chapter introduces you to the different features of the PSoC 4200DS Prototyping kit. This primarily includes the programming/debugging functionality, KitProg2 USB-UART and USB-I2C bridges, and the method to update the KitProg2 firmware.

3.1 Theory of Operation

Figure 3-1 shows the block diagram for the PSoC 4200DS Prototyping kit.

Figure 3-1. Block Diagram of PSoC 4200DS Prototyping kit

The PSoC 4200DS Prototyping kit is simplistic in design and focuses on providing you with complete access to develop applications using the PSoC 4200DS device family. This kit supports the following features:

- **PSoC 4200DS I/O Headers:** The PSoC 4200DS Prototyping board brings all GPIOs of the target PSoC 4200DS device to the two expansion headers, enabling the user to have maximum access to the capabilities of the PSoC 4200DS device.
- **User LED:** The on-board LED can be used to display outputs from the PSoC 4200DS device. This includes modulating the brightness of the LED to notify different states of the device.
- **User Button:** This kit has a push button, which can be used to provide an input to the PSoC 4200DS.

Note: The switch connects the PSoC 4200DS pin to ground when pressed. Therefore, you need to configure the PSoC 4200DS pin as 'resistive pull-up' for detecting the switch press.

- **Reset Button:** This button is used to reset the PSoC 4200DS device when pressed.
- **Power LED:** The Amber Power LED turns ON when the kits is powered from USB finger connector.
- **PSoC 4200DS Device:** This is the target device on the board.
- **10-pin Programming Header:** This header allows you to program/debug the PSoC 4200DS using an external programmer such as MiniProg3. This header is not populated by default.
- **5-pin Programming Header:** These programming headers allow you to program/debug the PSoC 4200DS using external programmers such as MiniProg3 or KitProg2. After the board is snapped, J5 can be used to program/debug the PSoC 4200DS using external programmers. J4 can be used to program any other PSoC devices using the onboard PSoC 5LP (KitProg2).
- **PSoC 5LP IO Headers:** These headers bring out a few GPIO lines of the onboard PSoC 5LP device. These include the KitProg2 USB-I2C bridge lines and USB-UART bridge lines. The additional PSoC 5LP pins are direct connections to the internal programmable analog logic of PSoC 5LP. You can use these pins as General-purpose input/output (GPIO) also.
- **Current Measurement Jumper:** Using this jumper, you can measure the current consumed by the PSoC 4200DS device. This jumper is not populated by default.
- **USB Finger Connector:** A PCB USB connector is provided to connect the kit to a computer.
- **KitProg2:** The CY8C5868LTI-LP039 PSoC 5LP device (U1) serving as KitProg2 is a multi-functional system, which includes a programmer, debugger, USB-I2C bridge, and a USB-UART bridge. Refer to the [KitProg2 User Guide](#) for more details.
- **KitProg2 Mode Selection Button (SW3):** This button is used to switch between the KitProg2 modes. You can also use this button to provide an input to the PSoC 5LP in custom applications. Note that the switch connects the PSoC 5LP pin to ground when pressed. [Table 3-1](#) gives a brief description of different LED status for various modes. Refer to the [KitProg2 User Guide](#) for more details.
- **KitProg2 Status LED:** The Amber Status LED indicates the status of KitProg2. Refer to the [KitProg2 User Guide](#) for more details.

Table 3-1. Status LED behavior for various KitProg2 modes

KitProg2 Programming Modes	Status LED (LED3)
KitProg2 program/Debug Mode (PPCOM mode) (default)	ON
CMIS-DAP & Mass Storage Programming Mode	Breathing
Bootloader Mode	Blinking

3.2 Programming and Debugging the PSoC 4200DS Target Device

The target PSoC 4200DS device can be programmed and debugged using the KitProg2. Before programming the device, ensure that PSoC Creator and PSoC Programmer software are installed on the PC. See [Install Software on page 15](#) for more information.

3.2.1 Programming Using PSoC Creator

1. Connect the prototyping board to the computer through the PCB USB connector (J8), as shown in [Figure 3-2](#). The kit enumerates as a composite device. If you are plugging in the PSoC 4200DS Prototyping Kit to your PC for the first time, the kit drivers will get installed automatically. Successful enumeration is indicated by Amber Status LED (LED3) ON. If the Amber Status LED (LED3) is not ON, refer to the [KitProg2 User Guide](#) for details on the KitProg2 status and troubleshooting instructions.

Figure 3-2. Connecting the PSoC 4200DS Prototyping Kit to a Computer

2. Open the desired project in PSoC Creator. From inside PSoC Creator, go to **File > Open > Project/Workspace**. This provides the option to browse to and open a previously saved project. If you want to open one of the example projects provided with the kit, follow the instructions in the [Code Examples](#) chapter.

3. Select the option **Build > Build <Project_Name>** or press [Shift] [F6] to build the project as shown in Figure 3-3.

Figure 3-3. Build an Example Project

4. If there are no errors during build, program the firmware into the kit by choosing **Debug > Program** or press [Ctrl] [F5], as shown in Figure 3-4. This programs the target PSoC 4200DS device on the PSoC 4200DS Prototyping kit, and the kit is ready to use.

Figure 3-4. Programming Device From PSoC Creator

3.2.2 Debugging Using PSoC Creator

For debugging the project using PSoC Creator, follow steps 1–3 from [Programming Using PSoC Creator on page 20](#) followed by:

1. Click on the **Debug** icon  or press [F5]. Alternatively, you can use the option **Debug > Debug**.
2. Once the PSoC Creator opens in Debug mode, use the buttons on the toolbar to debug your application.

For more details on using the debug features, refer to section 3.2 of the [KitProg2 User Guide](#).

3.2.3 Programming Using PSoC Programmer

PSoC Programmer (3.26.0 or later) can be used to program existing `.hex` files into the PSoC 4200DS Prototyping kit. Refer to the **Programming Using PSoC Programmer** section in the [KitProg2 User Guide](#) for a detailed explanation on how to program using PSoC Programmer.

3.2.4 Mass Storage Programming

The KitProg2 in PSoC 4200DS Prototyping board supports programming through a USB Mass Storage interface. This interface allows you to program the PSoC 4200DS devices by copying `.hex` files into an emulated USB Mass Storage device. For more details on KitProg2 Mass Storage Programmer, refer to the [KitProg2 User Guide](#).

3.3 USB-UART Bridge

The KitProg2 on the PSoC 4200DS Prototyping Kit can act as a USB-UART bridge. The UART lines between the KitProg2 and the target are hard-wired on the board, through the snappable area, with UART_RX assigned to **P1[0]** and UART_TX assigned to **P1[1]** on PSoC 4200DS (target). For more details on the KitProg2 USB-UART functionality, refer to **Using the KitProg2 USB-UART Bridge** in [KitProg2 User Guide](#).

Figure 3-5. UART Connection between KitProg2 and PSoC 4200DS

3.4 USB-I2C Bridge

The KitProg2 can function as a USB-I2C bridge and communicate with the software utility, Bridge Control Panel (BCP). The I2C lines on PSoC 4200DS (target) device are **P3[1] (SDA)** and **P3[0] (SCL)**, which are hardwired on the board to the I2C lines of the KitProg2. The USB-I2C supports I2C speeds of 50 kHz, 100 kHz, 400 kHz, and 1 MHz. For more details on the KitProg2 USB-I2C functionality, refer to **Using the KitProg2 USB-I2C Bridge** in [KitProg2 User Guide](#).

3.5 Updating the KitProg2 Firmware

The KitProg2 firmware normally does not require any update. You can use the PSoC Programmer software to update the KitProg2 firmware if necessary. Refer to **Updating the KitProg2 Firmware** in [KitProg2 User Guide](#) for a detailed explanation on how to update the KitProg2 firmware.

4. Code Examples

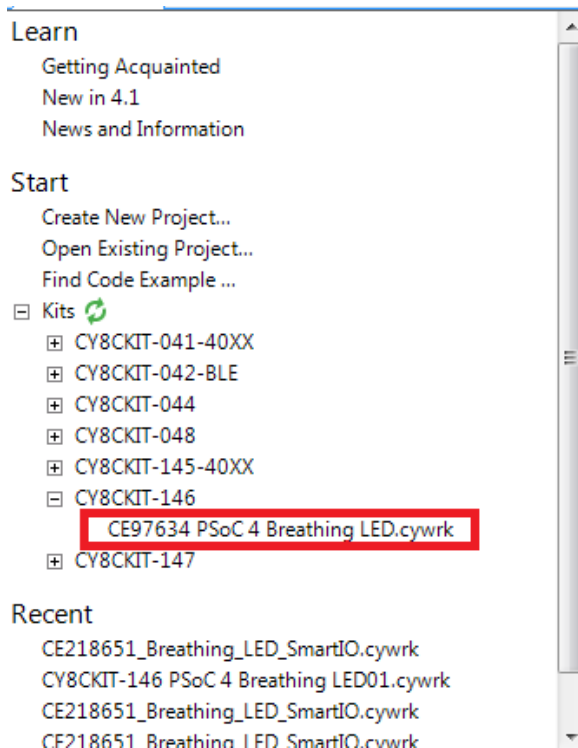

This chapter explains the code examples provided along with the PSoC 4200DS Prototyping kit. To access these code examples, download and install the CY8CKIT-146 PSoC 4200DS Prototyping kit setup file from the kit web page: www.cypress.com/CY8CKIT-146. After installation, the code example can be accessed from the PSoC Creator **Start** page as shown in [Figure 4-1](#).

4.1 Using the Kit Code Examples

Follow these steps to open and use the example projects.

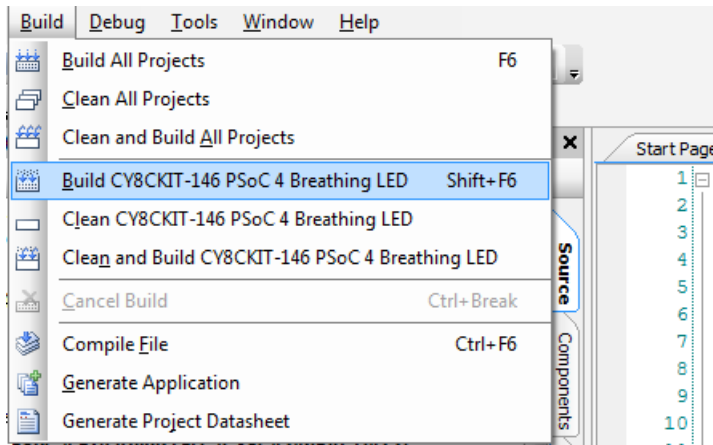

1. Launch PSoC Creator from the Windows Start menu (**Start > All Programs > Cypress > PSoC Creator <version> > PSoC Creator <version>**).
2. On the **Start** page, click on **CY8CKIT-146** under **Examples and Kits > Kits**. A list of example projects appears, as shown in [Figure 4-1](#).
3. Click on the desired example project and save it at a desired location. For the remaining steps, *CE97634_PSoC_4_Breathing_LED.cywrk* is used as reference.

Figure 4-1. Open Example Project from PSoC Creator

4. Build the example project by choosing **Build > Build <Project Name>**, as shown in [Figure 4-2](#). A .hex file is generated after a successful build process.

Figure 4-2. Build Example Project from PSoC Creator

5. Connect the PSoC 4200DS Prototyping kit to the PC using the KitProg2 PCB USB port, J8 as described in [Programming Using PSoC Creator chapter on page 20](#) to program the kit with this code example. If this is the first time the kit is connected to the PC, you should wait for driver installation to complete before proceeding with the next step.
6. Choose **Debug > Program** in PSoC Creator as shown in [Figure 4-3](#).
