PRODUCT OVERVIEW

The D1U4-W-1200-12-Hx is a 1200 Watt, power-factor-corrected (PFC) front-end power supply for hot-swapping redundant systems. The main output is 12V with a standby output of either 5V or 3.3V. Packaged in a 1U low-profile enclosure, it is designed to deliver reliable bulk power to servers, workstations, storage systems or any 12V distributed power architecture systems requiring high power density. The highly efficient electrical and thermal design with internal cooling fans supports reliable operation conditions. The D1U4-W-1200 is designed to autorecover from overcurrent and overtemperature faults. Status information is provided with front panel LEDs, logic signals and I²C management interface. Four units can be packaged into an optional 19" 1U power shelf to provide up to 4.8kW of power.
