Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

Murata Power Solutions

D1U4-W-1600-54-HBxC

AC-DC Power Supply

To Be Discontinued*

FEATURES

- 1600W Output Power
- 1.6"(1U) x 14.0" x 4.0" (41.0mm x 355.6mm x 101.6mm)
- 54VDC Main; PoE compatible
- 12V SB Output
- PMBus™ Power Management Bus supported by dual redundant I2C interfaces.
- N+1 Redundancy Capable; hot swap (up to 8 modules in parallel)
- Active current sharing on 54VDC Main output; integral bidirectional MOSFET output isolation device
- Over-Voltage, Over-Current; Over-Temperature Protection
- Internal variable speed cooling fans
- 20ms full cycle hold up
- RoHS Compliant
- Two-year warranty

PRODUCT OVERVIEW

The D1U4-W-1600-54-HBxC is a 1600W power factor corrected (PFC) front end power module intended for hot swap redundant systems. There is a main output of 54VDC (floating with respect to chassis ground) and a 12VDC Standby/ bias output (that is present whenever the incoming AC source is applied.

The form factor is suitable for 1RU chassis enclosures and is designed to deliver reliable bulk DC power to servers, workstations, storage systems, PoE switches or any 54VDC distributed power architecture requiring high power density.

The high efficiency design supports speed controlled dual DC fans in a thermally optimized package that is self-protecting and able to auto recover from over-current and over-temperature events. Visual status information is provided via front panel mounted LED indicators in addition to hardware logic signals and a PMBus™ management interface.

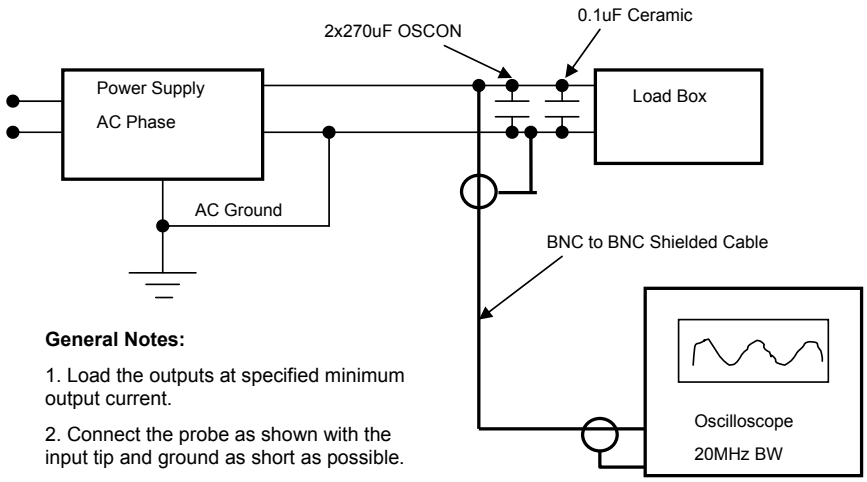
RIPPLE MEASUREMENT



General Notes:

1. Load the outputs at specified minimum output current.
2. Connect the probe as shown with the input tip and ground as short as possible.
3. Take all measurements
4. Repeat the measurements with the outputs at specified maximum output current.

OUTPUT CHARACTERISTICS

Parameter	Conditions	Min.	Typ.	Max.	Units
Remote Sense	Remote sense is not enabled on these variants due to the System Control feature and the relatively wide line & load regulation window.				
Efficiency	230Vac (excluding fan)		90		%
Output Rise (Monotonic)	10% to 95% rise time	Overshoot less than 10% for all outputs; no negative transition at turn off.

ISOLATION CHARACTERISTICS

Parameter	Conditions	Min.	Typ.	Max.	Units
Insulation Safety Rating / Test Voltage	Input to Output - Reinforced	3000			Vrms
	Input to Chassis - Basic	1500			Vrms
Isolation	Output to Chassis (Ground)	2250			Vdc
Grounding	The Main 54VDC output shall be provided with isolation between the output and chassis ground. It shall be able to withstand the following tests: a) 1500VRMS at 50Hz to 60Hz for 60s. b) 2250 VDC for 60s. There shall be no insulation breakdown during the test as defined in sub clause 5.2.2 of IEC 60950-1:2001. The resistance after the test should be at least 2M ohms when measured at 500VDC. The VRTN should be isolated from the 12VSB Return and the power module shall support PoE Electrical Isolation Requirements.				

STATUS INDICATORS AND CONTROL SIGNALS

Status	Conditions	Description
LED Indicators	Off	No AC applied to any power module in host system
	Off	No AC applied to this power module only
	Blinking Green	AC Present & VSTANDBY “on”
	Green	54VDC and VSTANDBY “on” and “OK”
	Blinking Amber	Power Module Warning
	Amber	Power Module Failure
I^2C and PMBus	There is provision for the connection of dual I2C buses for redundancy. This enables two master devices to connect to single slave device(s) within the power module. The power module is provided with a PMBus Management Interface that provides status, measurement and control data.	
SYS_CONTR	Host system control input that can be used to turn on/off the Main 54VDC Output.	

EMISSIONS AND IMMUNITY

Characteristic	Standard	Compliance
Input Current Harmonics	IEC/EN 61000-3-2	Complies with Class A Limits
Voltage Fluctuation & Flicker	IEC/EN 61000-3-3	Complies
Conducted Emissions	FCC 47 CFR Part 15; CISPR 22; EN55022	Complies to Class A with 6dB margin
Radiated Emissions		Complies to Class A with 6dB margin
ESD Immunity	IEC/EN 61000-4-2;	4KV Contact discharge; Criteria A
		8KV Operational air discharge; Criteria A
		15KV non-operational air discharge, Criteria A
Radiated Field Immunity	IEC/EN 61000-4-3	Complies
Electrical Fast Transients/Burst Immunity	IEC/EN 61000-4-4	Complies
Surge Immunity	IEC/EN 61000-4-5	1KV/2KV; Criteria A performance
RF Conducted Immunity	IEC/EN 61000-4-6	3VAC, 80% AM, 1KHz; Criteria A performance
Magnetic Field Immunity	IEC/EN 61000-4-8	3A/m
Voltage Dips & Interruptions	IEC/EN 61000-4-11	Complies

CURRENT SHARING NOTES

1. Main 54VDC Output: Analogue active share bus. The ISHARE bus (Pin B1) must be connected on all sharing modules.
   It is not required that the SENSE signals are connected to the remote load for current share to operate correctly.
2. Up to eight (8) power modules can be connected in parallel (non-redundant) or N+1 configuration. The current share bus is analogue bi-directional (can source or sink current from the ISHARE bus).
   The voltage of the bus would measure 8VDC for a single power module at 100% load; for two (2) modules sharing a common load the ISHARE bus voltage would be 4V for a perfect 50/50 current share scenario.
3. VSTANDBY output power modules can also be connected in parallel; however the combined available power is limited to that available from a single power module (12V; 2A; 24W) irrespective of the number of modules connected in parallel.
