Installation

Terminal Arrangement

Solder Conditions

Reflow (Infrared) Soldering Conditions*

Weld a thermocouple on the terminal side of the Sensor with HMP (high melting point) solder, place the Sensor into the reflow oven and set the reflow oven so that the peak terminal temperature will be $230^{\circ}\text{C} \pm 5^{\circ}\text{C}$. Complete soldering within 20 seconds.

The peak terminal temperature must not exceed 240°C .

Desoldering Conditions with Blower Employed

Desolder the Sensor at a temperature of 240°C within five seconds.

If a soldering iron is applied manually, desolder the Sensor within 10 seconds at an iron tip temperature of 260°C or within three seconds at an iron tip temperature of 350°C .

* Preheat temperature = 140°C max. for 90 ± 30 seconds.

Dimensions

Unit: mm (inch)

Precautions

- The Sensor does not use any materials detrimental to the ozone layer.
- Specifications other than the electrical or mechanical characteristics, external dimensions, or mounting dimensions of the Sensor are subject to change without notice.

■ Handling Precautions

Operating Environment

- The Sensor consists of a Hall IC and a magnet. Check that the Sensor in operation will not be influenced by any external magnetic fields.
- Do not install any magnetic materials within 2 mm of the Sensor, else the performance characteristics of the Sensor may not be guaranteeable. If there are any objects (e.g., motors and solenoids) generating magnetic fields near the Sensor, operate and test the Sensor before the Sensor comes into actual use.
- Do not apply any voltage exceeding 5V to the Sensor, else the Sensor may break.
- Do not wash the Sensor after the Sensor is soldered.
- Do not mount or dismount the Sensor while power is flowing to the Sensor.
- The Sensor may generate error signals if impacted at a minimum acceleration of 294 m/s².

- The Sensor may generate error signals if a vibration at a minimum frequency of 15 Hz and a minimum acceleration of 15m/s² is applied to the Sensor.
- Confirm that no static electricity at a maximum voltage of 5kV is applied to the pins, else the Sensor may break.

Operating Characteristics

The present output may stay unchanged if the inclination of the Sensor back and forth is 20° or more. Under that condition, the output might not change even when the Sensor is leaned left or right.

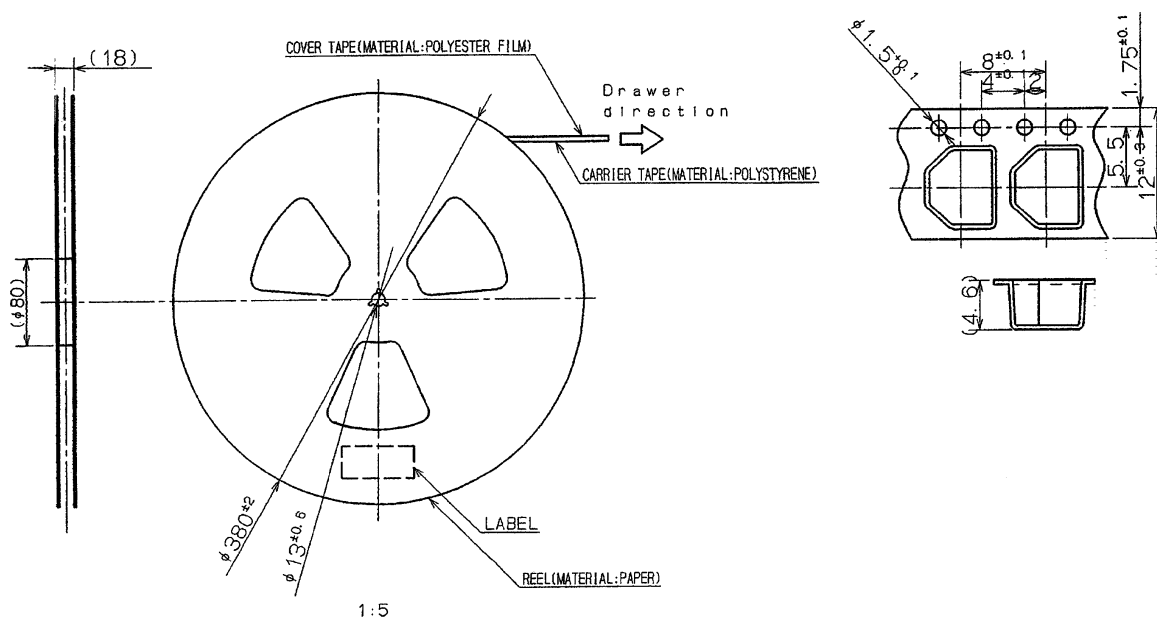

(Example)

If the Sensor is kept inclined back or forth as shown in the above illustration, the level of output might not change from high to low or low to high when the Sensor inclines left or right.

Tape Packing

■ Reel Dimensions

Note: 1. This packing conforms to standard of EIAJ.

2. Quantity per reel: 2,000 pieces.

3. Each reel is packaged within a sealed bag to protect the sensor from the effects of moisture and humidity. In order to maintain optimal solderability and performance, after the bag's seal is broken, ensure that storage conditions do not exceed 30°C, 80% RH and that reflow soldering/assembly occurs within two months.
